Bon Voyage!

The time has arrived for the listing of another graduating class. As with others this group looks back over the four short years that at the beginning seemed too long. This next week we will be adding a few well trained Osteopaths to the growing list. We are proud of this small college. They have made a good record for themselves in college and we predict that they will soon find their place and fill it well. We know that there are many opportunities for them and we know, best of all, that their field is not small. Selecting a location is like looking over a forest of a thousand acres and trying to pick the most satisfactory tree. We take pleasure in presenting to you the following with a listing of the first State Board they will take.

W. F. Moore—Iowa Board. Undecided.
B. A. Story—Iowa Board. Will practice in Iowa.
James Dunham—Iowa, Ohio and Texas. Undecided.
Willis Crews—Iowa Board. Undecided.
Dick Phillips—Iowa Board. Undecided.
Helen Butcher—Iowa Board. Undecided.
Chester Wyman—Iowa and Oklahoma Boards. Undecided.
O. E. Owen—Iowa Board. Will remain on faculty.

Again we want to call your attention to the high percentage taking the Iowa Board, the majority of whom will remain in the state. The pleasure of you who keep writing to us to send someone to your state, keep this in mind. May we repeat what is said nearly every semester at this time: "If you want more Osteopaths in your community, send us students who will return to you and please don’t expect boys and girls who were raised in and know the state of their birth, to migrate."

The week beginning January 11th will be filled with farewell banquets and parties honoring this group. Friday, January 15th will be Class Day. The class will arrange their part of the pro-

Know the Close!

(Well H. Marshall, D. O.)

There is a good deal of the osteopathic concept in the surgical treatment of chronic sinus disease. Recurring attacks of acute sinusitis of the persistence of a chronic condition are usually due to anatomic abnormalities of the nose that illustrate perfectly the doctrine that normal function and normal structure are intricately associated and mutually interdependent.

Deflections of the nasal septum, irregularities of this structure other than deflection, such as spurs, and malformations or malposition of the turbinates, are the common causes, predisposing causes, of chronic sinus infection. Any treatment that does not include the correction of these anatomic defects is more likely to be unsuccessful.

The straightening of a deflected nasal septum, the removal of the outward fracture of a middle turbinate are procedures just as osteopathic in their essence as the correction of a vertebral lesion. No class of operation is productive of more satisfaction than these intranasal manipulations for the relief of chronic sinusitis.

The frequency of sinusitis is underestimated. The general practitioner has been taught to examine the teeth and the tonsils; he consistently neglects the accessory sinuses, although it is probable that they are more often the site of focal infection than either of the other structures. And the diagnosis of chronic sinusitis is made with relative ease in the average case.

Frequent or unduly prolonged colds, postnasal discharging with posterior pharyngitis, morning headache spontaneously disappearing in the mid-afternoon, abnormal nasal discharge, and abnormal opacity on transillumination—

"It's the Little Things That Count"

(Continued on Page 2)

Help!! Help!!

About this time of year we ask each department to make a check of the work done and give us a little item about what happened during the past year. Dr. Fred Hecker of the Obstetrical department, has been doing the little thing for and today handed us this startling list of FACTS that you will find down a bit farther.

There is more significance in his report that will be credited by the majority of you. To many of you it looks like just another list of statistics, and figures were never interesting. There is one FACT that we want you to get out of it. The STUDENTS AT STILL COLLEGE HAVE THE OPPORTUNITY THAT YOU WISHED FOR.

This report is from one department only. The college clinic is covering EVERY type of case that may be seen in practice and with like results. Each of the twelve listed items on this report is a sermon in itself. Each could be made up of a subje. What has been for a long article that would be intensely interesting. We can give you a resume only and we hope you will Stop, Look and Think after each statement. This information looks and sounds a little fishy. We would be glad to have you stop at the office and examine the records, or better still, come and stay a while and see for yourself. For those who goes on day after day in the clinic of the Des Moines Still College of Osteopathy.

DO YOU KNOW THIS?

In the Des Moines Still College of Osteopathic Obstetrical Clinic

A Study of 500 Cases.
88.22% are spontaneous cephalic deliveries.
4.06% are breech.
6.27% are forceps.
49.6% are cephalic versions.
49.6% are boys.
50.4% are girls.
.6% are twins.
1. That a mother has not been lost in 2% years.
2. That the foetal death rate is less than half that quoted in Government statistics.
3. That under student care we do not lose any full term babies in the first month.
4. That morning sickness is readily amenable to osteopathic normalization. The clinic never uses endocrine extracts, etc.

seems that Brothers Evans and school on Monday morning. It is very likely that all returned safely for holidays still fresh in their memory.

Osteopathy.

attended. We hope to score even higher.

Winter seems to be over. It was a visitor to the house during our actives to help them.

Tears in his eyes, John Hagy remains to play porter and polish the cups. As Receptacle he is next in line.

We wonder why: Munroe frequents the Pet hospital; Dave is so poetic; Wicker is puffing his cigarettes; Hagy has the proper look since the holidays; Young is looking for wallpaper.

Brothers Hurd and McIntyre will leave for Oklahoma the end of this month for a year's internship. We wish you the best of luck: "Johnnie" and "Mac.

Brother Bechtol is still trying to learn the proper way to catheterize a patient.

Brother McGill was a visitor here last month. He gave us a number of viewpoints on our fraternity and Osteopathy.

Well we know that we have a very successful year in Osteopathy, and Iota Tau Sigma and the pledges may be assured of a most successful year attending our gatherings and allowing our actives to help them to the best extent in their ability in Osteopathy.

ATLAS CLUB

With happy thoughts of the holidays still fresh in their memory, all returned safely for school on Monday morning. It seems that Brothers Evans and Shifler lost their bearings near Iowa City and were delayed for one day. We hope that everyone had an enjoyable vacation and are ready to start the New Year with determination to do better work.

Dr. Bayard Twedell of Kansas was a visitor to the house during the holidays.

Maude Gerberman not only played this season's hit tunes, but assisted greatly in making our Christmas Dance of December 19 a decided hit with all who attended. We hope to score even a greater success with the dance planned for the future.

To Jim Farley and the Democratic party we owe our visit to their Hall of Fame and elected to the Presidency of our organization, Jack Eddy. Whereas F. D. lost his state, Jack didn't drop a vote. Congratulations to our new Noble Skull. To Finland we present Harry Stimson, our treasurer, whose Finnish leads him to spend money, not abroad, but on one. To Vatican they sent the worshipful Philippus, ambassador at large. To France we just elected Sacrum (chaplain). To France, the land of literary geniuses and champagne drinkers, we give Speed Iverson, who, as secretary and author holds the office of Stylus. To Missouri we offer Art Haight, our chaplain, has charge of recruiting members as Italy attempts to enlarge its military powers, should they be able to get their hands on the land of cheese and peace conferences we send our trustees. All aboard Dr. H. V. Halladay, Dr. Paul McHenry, and Homer, who, with tears in his eyes, John Hagy remains to play porter and polish the cups. As Receptacle he is next in line.

We wonder why: Munroe frequents the Pet hospital; Dave is so poetic; Wicker is puffing his cigarettes; Hagy has the proper look since the holidays; Young is looking for wallpaper.

Fraternity Senior banquet will be given on Saturday, January 16th in Youngkin's, Broth-

The fraternity Senior banquet will be given on Saturday, January 16th in Youngkin's, Brothers Dunham, Owen, Moore, Storey, Bos, and Herrin bid farewell to Delta Omega as the old active member graduates this month. We are sorry to lose our very efficient treasurer, but we are sure that Dr. Halladay, who has completed her four years of school and will now be able to go out as a member of a worthwhile profession, Dr. Omega extends best wishes and great hopes for a successful career.

Helen, Dorothy, and Mary Beth have been official physicians for the A. I. B. basketball team. The girls have had some invaluable experience during this season.

A business meeting has been scheduled for Saturday, January 16, at Evelyn Ketman's. Everyone is expected to attend, as the meeting is very important.

It's the Little Things That Count

(Continued from Page 1)

The regular banquet meeting was held at Canfield's Cafe on December 18. The speaker of the evening was Dr. Charles B. Kales, whose discussion of "Diet" was most enjoyable and very interesting.

Plans are being made for our Senior banquet to be held Jan-

We are pleased to announce the initiation of E. R. Corey to our chapter and membership of Psi Sigma Alpha.

OF OSTEOPATHY

Board and Faculty

The last two meetings of the Board and Faculty have been held on nights that were trying to make a record with a low temperature. The Board meeting was held on the 7th, one of the few really cold days during the month. In January the outside fell on the 7th and the weather man repeated his act. However, at both meetings the member was present and the programs as planned. The last two meetings of the Board have been mainly for the work of the graduate class and the academic standing of the students as a whole. Very few complaints are coming in from members of the faculty, so we feel that the work is progressing in an orderly manner and that the various classes are keeping up a standard of class-work that is above the average.

At the last meeting of the faculty Dr. James Shaffer explained a handout made from the records of the obstetrical department for the year just ended. An attempt will be made in this issue in enumerating some very interesting facts brought out by this compilation. The records here at the college are present, without any doubt, that Osteopathy and Osteopathic care are paramount in the management of cases of this type.

The Atlas Dance

It deserves an item. It was a decided success and due to the work by every member of the club. It was really quite some job to contract for an orchestra like Maurie Sherman’s, arranging for a suitable place to get out and sell tickets enough to take care of the expense of such an affair. Theatricals are a big hit and when they repeat this Spring they should have the support of the college, 100%, and the weather. Not only given the privilege of attending a function that was thoroughly fine from the first number to the last.

The orchestra was tops, the floor was ideal and with a good looking girl in our arms—well, you take the wording from there on.

We vote for another soon.

As Maine Goes...

“Go West, etc.” is often quoted from the pen of Horace Greeley. Part of Maine did. Dresser and Russell returning from their vacation brought part of the state along with them in the form of a White Pine tree, a sprout of Checkerberry and about fifteen pounds of genuine Maine earth. So what? So, we have a campus. It is known that the campus is carefully guarded in the office of our secretary, Mrs. Robinson, to whom the tree was presented. We seriously thinking of having this campus photographed so copies can be sent out to some few who think that trees and natural phenomena are more essential in the teaching of Osteopathy than equipment, a real faculty and a clinic unsurpassed in variety and quantity of patients.

Know the Nose!

(Continued from Page 1)

The formation characterize the majority of cases and furnish sufficient data on which to base diagnosis. The existence of the anatomical abnormalities mentioned before, together with turgescence of the nasal mucous membranes and hyperplasia of the turbinates, and the detection of pathological discharges issuing from a sinus orifice after a slight irritation of the mucus membrane with adrenalin clinch the diagnosis.

Treatment, then, in nine out of ten cases, is puncture and irrigation of the infected sinus plus the correction or removal of structural perversions.

Help! Help!

(Continued from Page 1)

5. That multipara labors are being so shortened by frequent osteopathic pre-care that trouble is being experienced in getting crew in time.

6. That ergot is not used routinely after delivery any more. Osteopathic pre-care stimulates involution of uterus after delivery.

7. That there has not been a case of puerperal infection in the clinic in 506 cases.

8. That our students are aborting in many cases of suspected pneumonia in babies by straight osteopathic treatment.

9. That the heaviest baby in the last 2 years weighed 11 ½ pounds.

10. That the smallest baby in the last 2 years was 1 pound.

11. That the January graduating class with only eleven members delivered 125 cases.

12. That three men in that class delivered 56 cases between them.

Chicago

It is the first of the year and with the turn of the calendar our thoughts turn to the coming national convention. Already the plans are being made and each month you will be informed of what is going on in the way of plans for your inauguration and entertainment.

The coming Chicago meeting is not for the physician alone. Our convention has a multitude of attractive features that are of international interest. Plan your budget now to include the family and make it a family affair. Some of these features are within easy walking distance of your headquarters hotel, the Stevens.

From Emmetsburg

The regular monthly meeting of the Algona General Hospital hospital was held at the Hotel Kermore recently. About a dinner and bridge at the Hotel Kermore Hotel recently. Dr. and Mrs. R. K. Richardson being host and hostess for the event. After a delightful dinner the ladies played bridge while a short clinic session was held in the office of Dr. Richardson. Dr. Meyer of Algona presented a paper on “The Ambulant Treatment of Hernia.” Dr. Andrews of Algona spoke on “The Osteopathic Care of Sinus Infection and the Common Cold.” Tindal spoke on “Osteopathic Management of Pregnancy.”

These meetings are held each month in the offices of the various Osteopathic doctors.

Doctor Frozen

A recent issue of the Des Moines Register carried an AP release stating that the body of Dr. L. H. McCartney of Hoxie, Kansas was found three miles from his car. He was on a call in the country and was caught in a blizzard and struggled through the storm, finally finding a windmill tower and fought refuge there. He did not know that a short distance away on the opposite side of the tower there was a home where a light had all night. He graduated in 1898 from the A.S.O.

Dr. McCartney's efforts result in his death in the form of a martyr class. To die with one's boots on is certainly a noble death but we are sure that Dr. McCartney will be remembered for his work during his active years in the practice of Osteopathy.
Assemblies
December 11
An excellent film showing the Montgomery-Simpson Suspension of the Uterus, from the Library of Davis and Gnek, was the main feature of the assembly on this date. The orchestra, as usual, opened and closed the meeting.

December 18
Under the sponsorship of the Sigma Sigma Phi the annual Christmas Assembly became one assuming almost dignified proportions. The band opened the hour with a stirring march putting everyone on their toes for what was to come. The boys had secured the services of an excellent quartette from Drake, which followed with appropriate music that was greatly appreciated. The true Christmas touch was given next by Jackie Woods, son of Dr. John Woods of the faculty, who read "The Night Before Christmas." A telegram that brought back memories of similar occasions back in the 8th grade.

Miss Gertrude Ganfield of the freshman class favored the assembly with a vocal number exceptionally done.

The music of "Jingle Bells" by the orchestra brought in the person of Santa himself and his aide. We have not yet been able to decide in our own mind just what sort of an animal it was; we know it was not a reindeer, for it did not have a bat-rack on its head. Santa and his faithful servant distributed sarcasm and gifts to the faculty, each quip and present bringing forth a loud applause. The gifts were certainly selected with great care and expense.

Dr. J. P. Schwartz, Dean of the College, next addressed the student body, stressing the need for care in driving home. He closed with "A Merry Christmas and Happy New Year, and school is out right now!" was met with universal acclamation.

Dr. Halladay encountered considerable difficulty in trying to get the crowd quieted down to sing with the orchestra the finale of "Auld Lang Syne."

All during the week preceding the Christmas assembly a beautiful light was turned on the waiting room of the college. This was moved to the assembly for the morning. We have the freshman class to thank for this appropriate decoration, complete with tinsel and ornaments.

January 8
Dr. R. C. McCaughan of the Central Office, who is universally known and admired in the profession, was a visitor in the city on this date. It was quite natural that he would be drafted to address the student body. Following an introductory number by the orchestra, Dr. Becker introduced Dr. McCaughan. For the past several years these two men have been in close association in the conduct of the affairs of the national association and Dr. Becker's introduction indicated that the affairs of the profession were in good hands with Dr. McCaughan at the head of the Central Office.

Dr. McCaughan spoke to the student body only. His advice was along a line not usually taken up by speakers within our own group and related principally to the unnoticed things that go to make up a successful doctor. The bell rang entirely too soon for all of us. We do sincerely appreciate his excellent advice and hope that he was sufficiently occupied in making frequent visits to the college.

Dr. Halladay followed, presenting eight members of the Freshman class who had recently passed the final in Osteology with a grade of 95 or over. The following were each awarded a key indicating his induction into the Osteopathic Osteological Fraternity: Borchart, Jackson, Walker, Blackwood, Huff, Jochaber, McKay, and Wing.

In the name of the Grand Chapter of Sigma Sigma Phi, Dr. Halladay presented Dr. McCaughan with a check for $100 to add to the A.O.A. Student Loan Fund. The fraternity voted this sum at the meeting of the Grand Chapter in New York last summer.

The orchestra closed one of the most enjoyable of our assemblies for the term just ending. We thank the Sigma Sigma Phi Beta Chapter, for the aid they have given us in making these meetings this year interesting and instructive.

The present Pit is on the first floor and is used whenever a demonstration is made that needs the close visual attention of the entire class. The Trustees plans in improving the facilities of the college include the removal of the Pit to the fourth floor, enlarging it, providing for additional seating capacity and more desk room for demonstrative lecture work.

The Log Book

Assemblies

Miss Gertrude Ganfield of the freshman class favored the assembly with a vocal number exceptionally done.

The music of "Jingle Bells" by the orchestra brought in the person of Santa himself and his aide. We have not yet been able to decide in our own mind just what sort of an animal it was; we know it was not a reindeer, for it did not have a bat-rack on its head. Santa and his faithful servant distributed sarcasm and gifts to the faculty, each quip and present bringing forth a loud applause. The gifts were certainly selected with great care and expense.

Dr. J. P. Schwartz, Dean of the College, next addressed the association on the evening of January 8. Although the weather was severe and many cases of flu and other infections kept some away, about thirty-five members of the association were present.

Dr. J. P. Schwartz, acting for the hospital, called the members to dinner and the line formed on the right. First a plate. Then a fish, a special baked potato, Brussels sprouts, your choice of rolls, etc. On to the dining room. It is needless to say that no appetites were lost until after the second helping of the plate. A generous wedge of coconut cream pie topped the repast. Coffee, hot rolls and marmalade were served at the table.

For this special occasion Dr. Schwartz brought in a speaker that we all enjoy hearing. He introduced Dr. R. C. McCaughan of Chicago, our national Executive Secretary. Dr. McCaughan addressed the association on "Straws," bringing into his talk the many things going on now that show what is to be done in the near future. His fund of Information is appalling and with physical man too well filled with food, mental indigestion threatened. It was a real pleasure and privilege to hear Dr. McCaughan and to know that we have men at the head of our association who are constantly on the job doing everything that can be done for us with the limited means they have to enable them to carry on.

Following his address Dr. McCaughan answered a number of questions and talked informally until train time.

The Polk County Association has Dr. Schwartz for its leader. He has an excellent choice of both mental and physical food and sincerely appreciates the effort he made to make this meeting the outstanding one of the year. We would like to keep in closer touch with men of the caliber of Dr. McCaughan.

Dr. R. C. McCaughan

Bon Voyage!

Married

Bennie H. Devine and Miss Celeste Pierce, December 24. Bennie has opened a fine suite of offices in the Equitable Bldg. in Des Moines.

Robert O. Pagen and Miss Jane Kent, December 12. Bob is a member of the January '38 class at the college.

Dr. John I. Royer and Miss Bessie Thomas, November 12. John has been practicing in Woodward, Iowa for some time.

Dr. Joseph C. Bartram and Miss Cathryn Cravens, December 15. The wedding took place in Des Moines and after a short honeymoon the couple will be at home in Tanner, West Virginia.

Chester Wyman and Mildred Borg, January 1, 1937. Chet is a member of the graduating class.

Polk County Association

The Des Moines General Hospital was host to the county association on the evening of January 8. Although the weather was severe and many cases of flu and other infections kept some away, about thirty-five members of the association were present.

Dr. J. P. Schwartz, acting for the hospital, called the members to dinner and the line formed on the right. First a plate. Then a fish, a special baked potato, Brussels sprouts, your choice of rolls, etc. On to the dining room. It is needless to say that no appetites were lost until after the second helping of the plate. A generous wedge of coconut cream pie topped the repast. Coffee, hot rolls and marmalade were served at the table.

For this special occasion Dr. Schwartz brought in a speaker that we all enjoy hearing. He introduced Dr. R. C. McCaughan of Chicago, our national Executive Secretary. Dr. McCaughan addressed the association on "Straws," bringing into his talk the many things going on now that show what is to be done in the near future. His fund of Information is appalling and with physical man too well filled with food, mental indigestion threatened. It was a real pleasure and privilege to hear Dr. McCaughan and to know that we have men at the head of our association who are constantly on the job doing everything that can be done for us with the limited means they have to enable them to carry on.

Following his address Dr. McCaughan answered a number of questions and talked informally until train time.

The Polk County Association has Dr. Schwartz for its leader. He has an excellent choice of both mental and physical food and sincerely appreciates the effort he made to make this meeting the outstanding one of the year. We would like to keep in closer touch with men of the caliber of Dr. McCaughan.

Dr. J. Robert Forbes—of Fort Dodge, Iowa, took office the first of January as County Coroner. Is Bob in a class by himself, or do we have others of the profession filling this elective office?

Births

To Dr. and Mrs. L. W. Spann—of Windham, Maine, December 25, a boy, Francis Stanley.
January 1941 Class

Time continues to plod its path thru the years. Just now its footsteps seem to those who will graduate in May, Time is breaking all speed records. This new class that just came in looks forward to four long years that have already been shortened by several weeks.

They are a fine group, we are happy to have them and express that their number is nearly double that of the class entering a year ago. We think that is something to tell. We know it reflects the confidence that the profession has in Des Moines Still College as an institution capable of educating trained osteopathic physicians.

Friday, February 12th, the college will honor this new group with a reception and entertainment at the Hoyt Sherman Place. We are just trying to show how glad we are to have them with us.

Freshmen, we welcome you and assure you that we are all here at your service!

Senior Class Day

The last assembly of the semester is always given over to the out-going class. The day of departure, as they wish, with the one reservation that the last few minutes be returned to the college for the presentation of Senior Honors. This class, detouring from the regular marked path, offered in its program entertainment and instruction, and so the program was a real success.

The college band for the day was turned over to Charles Guas, one of the graduates, who has been a faithful member of the instrumental organization for his four years in college. Charlie started out as trombone artist but finished up punshing the strings of a tenor guitar. His complex was leaving out instructions and his happiness knew no bounds when he found out he could start the numbers after the first double bar. The several selections rendered under his baton were loudly cheered, not only by the members of the orchestra, Tex Sharp, astonished all over the dog house, but by all around. Obed Wicke and Spine Halladay took turns at the piano, and Les Herrick blew all sorts of adrenals.

(Continued on Page 4)

Graduation

We doubt if you could match the final program of the January, 1937 class anywhere in the United States during the last 50 years. Have you ever attended a graduation by candle light? We did!

Remember that Des Moines' streets at this time were, and still are, covered with some inches of ice.

The class collected as usual in the library for the fitting of the gowns. The faculty and the speaker were huddled in the office for the same purpose. The hall was then opened.

The procession started and the slowly moving line of faculty and graduates filed to their respective seats. Dr. Bachman gave the invocation, Mr. Glenn Morning sang, and Dr. Becker introduced the speaker, Roy Stoddard Lane, who continued with his usual fine flow of oratory on the subject, “Life Is A Gamble.”

The lights went out.

Dr. Lane, thinking that they would soon return, kept on for a short time in total darkness. He hesitated and then speaking to Dr. Becker, asked if he should continue. Confusion was noted at the door.

Word had been sent to the auditorium that a car skidded against the pole on which was perched the speaker controlling the lights, not only in our building, but some others near, shorting the line, and candles had been sent for as a substitute.

During the next half hour the audience, led by Mr. Morning, sang nearly everything in the little red song book, still in total darkness. Came the candles.

Dr. Lane flashlight in hand, and surrounded on the speaker's platform by footlights of candles, continued and finished, adding that the seriousness of the situation was not covered with some inches of ice.

Mr. Morning rose to render his second musical number and found that the strenuous singing during the intermission had exhausted his voice and concluded that a voice is a gamble also.

Dr. Schwartz presented the class and Dr. Becker conferred the degrees. The recessional was made by candle light and the reception which followed continued under the same picturesque effects. It was thoroughly enjoyable, but things like that seldom repeat.

The graduation of this class will be remembered longer.
FRATERNITY NOTES

ATLAS CLUB

(E. M. I.)

With the beginning of the new semester we find most everyone happy to be rid of finals and eager to start on something new and different.

The semi-annual senior banquet was held January 15th at Youngker's Tea Room. Only one member was lost by graduation and to brother Chester Wyman we extend congratulations and best wishes for the future.

We are happy to have back with us this semester Wilson F. Simmons and brother William F. Costello. Both return to us after a year and a half of absence.

It is our pleasure to announce the pledging of James (Gang) Watt from Springfield, Missouri. Congratulations, Jimmy.

The Xiphod chapter is to be the guest of the Axis chapter of Kirkeville, Mo., on the week-end of February 19th. A basketball game and dance are to be the highlights of the affair. A few "bull" sessions may also be on hand.

With high hopes of coming out on top, the bowlers have been practicing very diligently and we believe a first-class team will be on hand when the league swings into action.

Dancing to the tunes of America's greatest swing-time bands was the highlight of the evening. The most enjoyable open house was held. Yes, the radio is a wonderful machine!

Can you imagine: Schiffer chowing coal at 3 a.m.? Bridentine getting to school without sliding half way? Callahan in love?

For sale: Technique by Simons.

---

Assemblies

January 29

With the beginning of the new term, the first two Friday meetings are devoted to set programs for two specific purposes. The one may fail but the other always succeeds. The 29th of January was Faculty Day.

It is a difficult task to get the full corps of our faculty group together at one time. Not that they are scattered over too wide a territory, but they are a busy lot and with time at a premium, fifty percent of the total is considered a good showing at that time of day.

Following a number by the orchestra, Dr. Halladay transferred the honors to Dr. Arthur D. Becker, president of the college, who introduced the faculty members present. Some were new to the upper classmen, for the work and advances in the work of the instructors change with each class but the Freshmen needed to be warned and advised as is the usual custom.

Dr. Becker saved the president's address until the last and expressed his pleasure also for the large class that the assembly closed with a number by the orchestra.

O. February 5th, being the second Friday of the semester, was devoted to introductions from the student body. The new class held the spotlight for the first part of the meeting and those of you who have gone thru with this ritual know just what the Freshmen stood for. May we, sotto voice, state that Ohio was away out in front this semester, over their old rival, Michigan. (Michigan boys, N. B.)

Several students having been out one or more semesters have returned and those were also introduced. This makes our total registration for the year a decided increase over the total for the previous year.

Loan Fund Stamps

In addition to the annual contributions by members of the faculty of the college to the A. S. O. Student Loan Fund, the students of the college pitched in pennies and other small change to add nearly $50 to the fund this district. The student wing of the Freshman Class must have worked harder than the others for he turned in over $10. We thank the class officers for their cooperation in helping to put this over in such a generous way.

Dr. E. E. Detwiller

of London, England, recently sent us some of the Edward VIII stamps. Thanks, Hoppe!

---

Dr. Owen Retained

Dr. O. E. Owen, member of the recent graduating class, has been added to the permanent teaching staff of the college. For the past three years Dr. Owen has been an able assistant on the faculty, having been in several laboratories and responsible for the didactic instruction in Embryology and Biology. This semester he is doing additional work in the department of Pathology, and will have charge of the exhibit being prepared for the coming Chicago convention.

Dr. Owen has been majoring in science for several years. His B.S. degree was earned at Penn College in 1929. From there he went to the University of Missouri as assistant in the department of Zoology. Here he received his M.A. and transferred to Berea College in Kentucky as head of the department of Biology, teaching the several subjects related to the course. Since his matriculation at Still College he has been kept busy and has proved an able instructor in the several objects that have been assigned to him.

Dr. Owen is a member of Gamma Alpha, national graduate scientific fraternity and was active in Phi Sigma Gamma and Psi Sigma Alpha in osteopathy. As an example of his interest in pathology, Dr. Owen contributed an article to this issue of the Log Book, which will warrant your concentrated attention.

This is condensed into too small a space, for the subject is one that is attracting greater interest each month.

The college is proud to add Dr. Owen to its list of able faculty members and we know your students here at Still College will have the opportunity of associating with one more authority in their osteopathic education.

Dr. W. S. Irvin

of Marietta, Ohio, D.M.S.C.O. '36, is standing up in a hospital boat on page 19 of the Feb. 8th issue of "Life." See center picture on right half of the page. We would like to have some stories of what our profession has been doing down in the south. We congratulate Dr. Irvin and hope that others noticed this picture.

Osteopathy Without Limitation

Threshing

Down on the farm where I spent my summers as a little boy, we always looked forward with eager anticipation to the threshing season. I well remember the fine appearance of the well-filled sacks of grain. I liked to stand where I could see the grain as it came out of the grain spout. It seemed to me at that time that the particular part of the threshing activities was the most interesting. I now realize that there would have been no grain with which to fill the sacks, if some one had not attended to the interplay of sowing into the front end of the machine, where the feeder is placed. I also realize that there would have been much of planning and preparation before the grain was gathered into bundles. Taking preparation of the soil, the sowing of the grain and the harvesting of the crop, all required much time and energy.

Quite similar in many ways is the situation in the osteopathic profession. We need more osteopathic physicians and surgeons skilled in the art of healing. We need more of the sturdy grain to meet our needs. We need an adequate supply of teachers and the hospitals well equipped and staffed. May they be likened to the machine. To continue the simile, we must have bundles which may be said to represent prospective students. Much planning and preparation are necessary before the good bundles are gathered into bundles. Only good bundles should come to our machines.

The year's work is not over.

We are constantly planning to do good work at the machine, seeking to turn out a superior product with the least possible waste motion. It is the work of the osteopathic profession to grow bigger and better. Build for tomorrow.

—Arthur D. Becker, D. O.

Professional Fees and Collections

Some time ago we wondered just how much you folks in the osteopathic profession are making. We asked Dr. Sampson, our professor of Medical Jurisprudence, to write the article you are about to read.

By Henry E. Sampson, Professor of Malpractice and Insurance

It is to the credit of the osteopathic profession that its members give first consideration to attending their office bills. That being done, they owe it to themselves not only to charge but to collect. "Reasonable fees for their services, are worthy cases where charity service should be given, and, if you can understand my patient and public, it will renown to your credit. That is an entirely different matter than the making of a charge because of a misconception of your legal rights or through your neglect, you fail to make such collections. It is evidence of the fact that you are a poor business man, and the failure to make these just collections will deprive you of many things. Do you realize that prejudice and financial success, you should give more serious thought to the business and legal phases of your practice.

To suggest the important and far-reaching effect of these matters, permit me, in the limited space available, to ask you the following questions:

Suppose that a person, accidentally injured, was rendered unconscious. He is making a request for your professional services. Would you encounter any legal difficulty in attending the patient for services? Would you look to the stranger who called your attention to the case? Would the fact that the injury was not such as to require immediate attention affect your rights to collect?

Can you recover your fee from one who does not take your advice to render services to another, if the party calling you is not legally bound to furnish you with the information necessary to know the state of the patient? If you can so recover, what preliminary arrangements must be made in order to insure your recovery?

If you are summoned by another physician to attend a case and your advice is not followed, who is responsible for paying same, the physician who called you in or the patient who was billed?

Can you recover your fee for attending an aged parent from a child who is under no legal obligation to support such aged parent? Would the fact that such parent was, at the time, living with the child or that child called you, make any difference in your right to recovery?

Does the relationship of father and child impose on him a liability to pay you for professional services rendered his daughter-in-law?

Could you recover your fee from a husband if you provided his wife with professional services and you knew that the husband had selected another physician for his wife and objected to you?

If you are recovering your fee, you can recover from a well-to-do mother for the fee which you charged for services rendered her husband. Would the new husband standing her husband might be alive and also able to pay?

Can you recover from an employer, on the same basis as in the above, the fees you charged for services rendered a patient who was injured in the course of his employment at a party calling you is not legally liable to such patient? If you can so recover, what preliminary arrangements must be made in order to insure your recovery?

Is a transportation company liable to you for services rendered a person injured in the course of employment at an accident? Would it make any difference if the accident occurred to the fault of the company?

From whom could you collect your fee if someone handed you a business card on which was written a request that you call on a certain sick person at a certain address, requesting you to go at once?

How must you keep your books of account in such cases as the above in order to legally collect your fees, and what facts must you establish in court in order to recover if the person that you charged refused to pay?

Athletic Clinic

We will not be outdone by the department True, we have the athletic clinic, but did not attend the births listed in another article but we have a berth of our own that we think is just as important. In 17 or 18 years we will be taking care of these boys and some of the girls, there must be an OB department to furnish us with material later on. That is the kind of co-operation we have here in Still College. Give us your advice, what to plan in the way of prophylactic treatment and what to think about the in the way of research and work.

The year's work is not over. Following basketball the Seniors get into track and baseball and all look forward to the big Drake Relays, where we contact nearly every large college in the country and many of the smaller ones.

The work of the athletic clinic can be summed in one statement. We took 5000 contacts during football season and not one serious injury occurred!

Sigma, Sigma Phi, Grand Chapter

In addition to its gift of $100 for the athletic fund, the Sigma, Sigma Phi, Grand Chapter, recently resigned this office, due to other obligations.

Dr. R. H. Gibson—of Worthington, Ohio, announces the arrival of Robert William Gibson, January 22, 1937.
Hereditary Pathology

(By O. Edwin Owen, B. S., M. A., D. O.)

Illness or disease is due to two factors, operating either alone or in a composite manner; environmental influences and hereditary dispositions. Environmental causes of disease are commonly understood. When we say that a disease hereditary we have by no means discovered its cause. In fact we have used the word "heredity" to clothe our ignorance, but with the rapid advances in this field at the present time we are no longer able to use it as a guile.

The causes of hereditary diseases arise out of the innate hereditary equipment of the individual which has been bestowed upon him by his parents. Clarence, who is famous for his researches in heredity, is of a firm belief that the control of heredity should rank equally as a topic of research beside the study of environmental causes of diseases.

The present status of our knowledge in regard to morbidity is such that we are able to make the statements. Morbid equipments are transmitted in accordance with the same laws as normal ones. The same Mendelian Laws hold good for human beings as for other plants and animals. The same is true of the production of normal factors as of pathological. In the main, normal structural and functional aspects of the body are brought about by the operation of many hereditary factors, while morbid characters are instigated by single factors whose parents have replaced the normal.

The study of hereditary diseases has made enormous advances within the last few years. We are able to say definitely how certain conditions are inherited, even in the human body. Additions to our knowledge of myopia, myopia with myopia are rapid. The presence of myopia in a family is no indication of the inheritance of myopia, but the presence of myopia is a factor predisposing to myopia.

There is increasing belief that neoplasms are hereditary. A malignant tumor supposedly originates from a single, morbidly modified cell. The growth of a cancer cell is distinguished from the growth of normal cells inasmuch as it is not adapted to the structural plan of the body as a whole and proceeds regardless of the body's need for self-preservation. The present status of our knowledge in this respect is that certain factors operating from within or without the body induce certain latent cells within the body to "cell and go.

It is suggested that these factors may operate upon an hereditary predisposition. We are not in a position to talk in regard to the method of inheritance of malignancy. The accurate case-histories which are now on record of hereditary malignancy will be a simple recessive. Numerous genealogical trees have been published, tracing cancer of the breast from one single generation to another. In Austria, fifteen families have been reported in which all the members have died of cancer. In the Bonaparte family, Napoleon I, three of his brothers and sisters, and their father, all died of cancer of the stomach. Other records show retinal glioma and xeroderma pigmentosum to be dominantly hereditary, as recessive diatheses.

Certain investigators are now willing to make a statement in regard of eutention of malignancy. Namely, by its nature, cancer is an idiokeine of somatic cells. By idiokeine they mean the physical and chemical changes which occur in the hereditary equipment of cells. We know that change part of the germ cells and are transmitted to the next generation, resulting in the emergence of new characters like those in the somatic cell which has been modified to become a cancer cell, retains its peculiarity and passes it on to its children for countless generations during the growth of a malignant tumor.

Here is where extrinsic factors such as chronic irritation, X-rays over a period of time, as well as the physical and chemical changes that take place in the etiology of tumors, in that they are assumed to be at least partly responsible for idiokeine. We generalize investigation from work which shows that, who are authorities in heredity that, "malignant tumors are the result of a disturbance in the normal chromosome constitution of cells." This concept is not new but rather an attempt to make a known idea more precise, and it would follow that there is no use in attempting to find a single, specific cause or cure for cancer. There are certain points which may be a guide in the prevention of cancer, namely——avoid idiokeine regurgates and establish racial-hygienic measures.

In this brief article, only a very few phases of the increasingly dominant field of hereditary pathology have been touched upon. It is my opinion that hereditary pathology will soon demand the attention of the student of environmental pathology, if we are to have a more complete understanding of human disorders.

Dr. Mary Golden and Rachel Woods——

national president and secretary of the O.W.N.A. flew Sunday, January 24, to Chicago, attend an extraordinary meeting of the national executive Committee of the O.W.N.A. and were back home that night. There is a decided advantage in being able to return home by the same train and contiguously to our modern methods of transportation. Drs. Golden and Woods are doing things this year in their O.W.N.A. work.

The Ohio Circuit

(By L. L. Paeto, D. O.)

On my recent trip to Ohio, I lectured on "Reflexes and their Diagnostic Significance", at five district meetings. The first meeting was held at Bowling Green, about twenty miles from Toledo, on Monday evening, January 16. Several doctors had to appear about thirteen or fourteen years, and was who my first prosecutor in dissection. He and Clare, who drove down from Toledo. Bowling Green is a beautiful town. The Heinz Company has the largest tomato ketchup factory in the world there, but when I went to the restaurant for lunch I was not able to get any tomato ketchup. Maybe the reason was that the factory is not running at this season of the year.

On Tuesday night I went to the group at Cleveland, the meeting being held in the Hotel Cleveland. There were forty-five at this meeting who knew me quite well, so I taught me most of what I knew. After I finished my lecture, he did not say whether he was satisfied with my lecture or not, but I will not resent his silence. With the help of Dr. O. Weidman, a classmate of mine, we are going to have a medical school in Cleveland.

Wednesday morning I went with Mr. Sprague out to the Orthopedic hospital and spent the morning with Dr. Shepherd. We examined the patients examined, for it happened to be clinic day at the hospital and several doctors from out of town were there. The patients were examined for examination. Left the hospital at twelve o'clock and hurried to the offices of Grossman, Charbonneau, and Rutch. Dr. Rutch showed me around their offices, then we all went out to lunch.

I stayed talking over some of the interesting cases with them. Grossman looks as young as ever except that his hair is almost white. When he reads this he may decide to change the color of his hair. After sigh-seeing for two or three hours I took the train for Ravenna, where I was to lecture in the evening.

Arrived in Ravenna at five-thirty and located the hotel where the meeting was to be held. Here I met Charles Naylor, who graduated from Des Moines several years before me. The meeting was called promptly at six forty-five. There were thirty-three present at the meeting. The last patient I saw was there, and he, Elton, and myself had a good visit after the meeting was over. Here was where I had hoped to see Dr. Smith, of Youngstown, a classmate of mine, and Bill Rankin, who graduated in June '35, but was too busy afternoo and evening that they could not make the trip. I came to Ravenna in the dark and left the following morning in the dark and am still in the dark, so as knowing very much about the.

Thursday morning I left for Columbus, where I talked to the district meeting that evening. About members were present. Just after dinner and before my part of the program, Dr. Clyborne and I wrote out the telegrams to the Graduating Class who were having their banquet at Younkers Tea Room. I met more doctors there. Here that I knew than at any of the other meetings. Lon and Henry Scott, Strickmarr, Lang, Van Ness, and Gibson, a recent graduate, told me he was expecting to be called to the hospital at any time on an emergency. I heard my wife rouse the next morning when I learned that. Dr. and Mrs. Gibson were the proud parents of a baby boy.

Senior Class Day

(Continued from Page 1)

and musical sky-rockets out of his hat.

B. A. Storey, president of the class spoke in behalf of the class and presented the Class Diploma. Butcher reviewed the history. This proved to be of unusual interest, for this class has been buffeted around from post to post and succeeded in graduating in spite of the apparent attempts on the part of the faculty to keep them in school.

Don Leigh offered a new bag of tricks and after fooling all of us, exposed the simplicity of it all. We all know we are dumb but really are.

President Story of the class called President Becker of the College, and presented the school with a fine adjustable lamp to be used in the E.E.N.T. department.

Senior Honors were then announced by Dr. Becker, the following members being recipients as indicated: Myron N. Bos—Clinic and Anatomy. Helen M. Butcher—Clinic and Physiology. Willis L. Crews—Anatomy. James E. Dunham—Obstetrics. Charles U. Gna—BAND. John J. Herrin—Obstetrics and Clinic. William H. Moore—Obstetrics and Clinic. Chester W. Wyman—Sigma Sigma Phi award in Osteo at the College. Sigma Sigma Phi award in Eye, Ear, Nose and Throat. O. E. Owen—Sigma Sigma Phi award in Service to the College.

The assembly closed with two tunes in the popular Jamb style and left everyone in a good humor.
Do We Start Equal?

To know whether we start equal or not is a subject that has been widely discussed and before that is decided, one may ask questions bearing a direct influence on any answer that may be given, if we are not, why and if we are, why are we so different as we develop? What is the influencing factor that makes the difference, or what is absent that permits these variations?

So far science has been unable to isolate any one single factor or entity in the half cells that reveals a cause for the variation in the physical and mental capabilities of an individual. The environmental influences of nutrition, climate and social life have been unable to produce physical or mental giants and the various artists at will. It is obvious that these factors, if of an unfavorable nature in themselves, have been no potent factor in keeping an individual from developing into a personality rating mention in "Who's Who."

In the Declaration of Independence so masterly compiled by our forefathers the statement is made in the first sentence of the second paragraph, "that all men are created equal." This, I feel, refers to the equal right of liberty. In a writing older than the Declaration of Independence and spoken by Christ in his parable of the talents, as recorded in the fifteenth verse of the twenty-fifth chapter of St. Matthew, it states, "And unto one he gave five talents to another two, and to another one; to every man according to his several ability." There is the acknowledgement of difference in men. These inequalities are more (Continued on Page 4)
ATLAS CLUB
(E. M. I)
With the passing of winter we find Spring at our doorstep and everyone just a little bit touchy-
derived. The bridge team seems to be holding its own, having won more games than they've lost. With a little more luck we may be able to finesse through to the top.

With hopes for the championship pushing them strongly, the bowling team is still knocking them over, although competition becoming keener all the time. The chapter was honored by having Mrs. K. M. Robinson and Miss Bagen as dinner guests during the past month.

Visitors to the house the past month included Drs. Craig and Barton, Frank Hardy and Brothers Konrad and Underwood from the Kirksville college.

Returning with tales of black widow spiders and "Goodyear" gas caps, the members who journeyed to Kirksville on Friday, Feb. 19, assured everyone that a most enjoyable time was had by all. Our boys were victorious in the basketball game, 26-18, but "Tubby" Evans was loser by defeat, slow and sound. The recent Iowa Blizzard was encountered on the return trip and some delay was made but everyone returned filled with "Whatchamacallits:"

Hargy is stuck on the "Iowa fog..." and has a new "sigh" (sure sign of Spring) ... Schiffer has a new "abbreviated" sedan... Pledge Engleman dreams about redheads.

With only eleven more weeks of school left this year, the boys have decided to attack their studies harder and finish the year with a "bang."

On Feb. 19th the fraternity had charge of the assembly program. Mr. James, state Osteopathic attorney, spoke to the fraternity about the present legislation for and against Osteopathy as to its prospective outlook for the coming year. The information furnished was needed and appreciated by all.

Sunday, Feb. 30th, Mrs. K. M. Robinson and Miss Bagen honored us with their presence at dinner.

At this time Phi Sigma Gamma wishes to announce the following new men who receive their initial initiation Sunday, March 7th. They are: Paul Calder of Dearborn, Mich., Alfred Ferris of Highland Park, Mich., Glen Munger of Milwaukee, Wis., Glaster Pease of Detroit, Mich., Stephen Russell of South Paris, Maine, and Neil Woodruff of Flint, Mich. Following the ceremony a banquet was held at the Davis Grill. Drs. O. E. Owen and W. H. Driver, both alumni of our chapter, were guest speakers. Open house was maintained after the banquet.

Also we wish to announce the pledging of Holilla Jemison from Keosauqua, Iowa.

The bowling team, of which we are very proud, is at the present time, in a tie for first place, having won twelve and been defeated thirteen. On Wednesday, March 10th they clash with the tying team. The team is composed of Ferris, LeRoque, Robinson, J. B. Miller and Jack Miller. Flash! The team has just returned home with the glad tidings of having won their match. This puts them in the undisputed lead of the tournament with a record of fourteen wins and one defeat.

The bridge team is also in first place.

On the evening of March 5th Dr. Douglas, friend of Osteopathic College, Iowa, was dinner and all night guest of the fraternity.

Remember: "Nothing is so false as a fact; except people." (Dr. D. W. Morehouse.)

Well!! Well!!

Last week one of my students called my attention to the announcement of my brain children were listed in the last edition of Dorland's Dictionary. I could not believe it but when I looked back to the proper page, there they were in just as big type as any other words and with the same definitions given them at birth, sixteen years ago.

At that time we were trying to clarify the situation in regard to lessening an attempt to establish a nomenclature that would be adequate, and lengthy and easy to understand. After considerable thought on the matter, taking the definitions and working back, I figured out the following:

Anteoxion—Anterior flexion or forward bending.
Postoxion—Posterior flexion or backward bending.
Lamoxion—Lateral flexion or side bending.
Rotoxion—Rotation and flexion.

If I remember correctly, these words were first announced in the old Phi on the third floor of the A. S. O., to the class that graduated in June, 1922. The words with definitions were published in the Journal of Osteopathy and in the Osteopathic Physician, and since then I have heard several times offered them to the nomenclature committee. They were turned down because they were not in general use. Now they are in the latest edition of one of our standard dictionaries and what will we do about that? I think I will write to the publisher and find out how he came to make such a mistake.

—Virg Halladay.

Dr. Rollin E. Becker—announces his location at 506 Pontiac Bank Bldg., Pontiac, Mich. He is the older son of our President Becker and was, until recently, associated with the Central Office in Chicago, as managing director of the Research Institute.

Dr. Paul V. Wynn of Albuquerque, New Mexico, is doing some red hot broadcasting over station KOB. We are all glad to know that Paul is not only doing this good work but is also building Osteopathy in that territory.

(We have this item on fee for two issues and failed to get it. A. M. from Paul invites us to offer this in an answer with an apology.)

Dr. Lilllian Peterson entertained the sorority at her home Monday, Feb. 22. During the evening the guests gave a fine demonstration of soft tissue technic. Delightful refreshments were served.

Dr. Mary Golden served a delicious six-thirty dinner to the girls of Stiff College at her home Saturday, March 6. Mrs. Becker was the honored guest of the evening. After inspirational talks on organization, given by Dr. Golden and Mrs. Becker, the evening was spent playing Monopoly, anagrams, and bridge.

The scene faring rather badly in a tournament way, both inbridge and bowling. The girls need more scholarship, or may be more encouragement and less advice.

The Log Book

The regular monthly meeting of the Polk County Osteopathic Association was held Friday, Feb. 12, 1937, at the Hotel Claridge, Des Moines, Iowa. The speaker for the evening was Dr. Ira C. Gordon, practicing physician of the city and a member of the faculty of the college. A very interesting and instructive lecture as to the use, advantages, and dangers of high frequency therapy in the treatment of diseases was presented by him. Following the lecture, a question and answer period was carried on in which Dr. Gordon answered all questions to the satisfaction of the members.

Dr. Arthur D. Becker, president of the college, personally invited all the members to the college Freshman reception that evening at Hoyt Sherman Place.

Our Ladies

The Osteopathic Women's College and the Auxiliary will meet on Friday, March 12, at the Chamberlin Hotel in Des Moines, Iowa, for a reception to be held in honor of our osteopathic women of national reputation. You can make this evening appealng and attractive to them, and to all going, by giving them a service that will lay the foundation for adult health and a more abundant adult life.

Improvement in our quarters will be necessary to meet this increased service. Rearranging, painting, some added equipment, and keeping the College and the Auxiliary in repair are among the things those who have attended clinics in the past have asked for. A committee to deal with the matter has been appointed, and plans are being made for a fund drive to carry it out. The Auxiliary will hold a meeting on Friday, March 12, at the Chamberlin Hotel to bring the matter before the membership.

Dr. and Mrs. Arthur D. Becker

State Fair Clinic Expands

Beginning this year, any person over five years of age will be accepted for examination at the State Fair Clinic. That great experiment in life between babynood and adulthood that is filled with possibilities for both, has been given a lift to ensure that the brim with possibilities for both, has been included. In State Fair Clinic. Again Iowa leaders in this as she did in the Adult field.

It is not necessary to tell you of the importance of this addition to our clinic service. That has been emphasized for some time. But it is important that your cooperation is 100% in letting your community know about it. Let them know that their children can have this thorough examination at prior and school year. That they will have the advice and counsel of some of the best physicians in the state. Many of them are of national standing. You can make this examination appealing and attractive to them, and to all going, by giving them a service that will lay the foundation for adult health and a more abundant adult life.

Viewing Up

(Continued from Page 1)

est errors that have been made in the theories of the eye that have been caused by poor films, insufficient number of films and by incomplete study of the films. Clinical Skull Fractures

Due to the marked variation of blood vessel spaces in the inner plate of the cranial vault in the infant, all fractures of the skull are rare. Byron L. Cash, D. O.

Dr. Raymond Perdue

of Flint, Mich., was recently elected president of the Genesee County Osteopathic Association.

P. C. O. A.

The Hoyt Sherman Place was again the scene of our second Freshman reception of the year. This affair was in honor of the freshman entering in January, 1937, and the entire college personnel was present to meet the new members and the current body. The reception was held the same evening as the Polk County Association program at which Dr. Becker extended an invitation to the group to attend the reception following their dinner and program. Many took advantage of this and the prearranged program was a success, just as sure to see these with the group of students.

Cards, dancing and refreshments were the order of the evening, all being enjoyed. During the intermission the new class presented with niager dances of the day—mentioning Lincoln's birthday.

Board and Faculty

The regular meeting of the Board of Trustees and the Faculty was held on Thursday evening, March 5th. Reports at the meeting of the board of trustees were encouraging and the good word given out that many letters had already been received asking for information about reservations near the college building. A list of nearby hotels will soon be published in the Log Book.

The Faculty meeting was of special interest. President Becker, after rousing better information on the subject of teaching, called on each member of the faculty to air his pet methods. The group learned that a teacher is more than a walking dictionary and when it comes to a crisis, can really do a thing with his notes. Many excellent ideas were brought out and will be taken up for discussion at a later date.

Freshman Reception

There is perhaps, no attribute of personality that is more stimulating than enthusiasm. To be enthusiastic over a project kindles a fire that sheds a warm light over and around that project and it leaves it luster and increased worth. It is difficult to wax enthusiastic about any subject in which one knowledge is fragmentary or hazy. When one loses their interest or does not give sufficient time or energy to the subject, the given subject, enthusiasm dwindles and is lost and the subject becomes cold and drab.

There is nothing more contagious than enthusiasm. The salesman that is enthusiastic over the material with which he is dealing, is the real estate agent who is enthusiastic over the property he has for sale, the golf player who is enthusiastic about his game—all put something in the way of an overplus into their activities that inspires their customers or associates with favorable reactions.

Inspiration and enthusiasm are twin sisters in many ways. The instructor that inspires his class, the politician that sways their customers or associates, patients and friends will sense the fact and in turn will become increasingly interested.

"Enthusiasm is the genius of sincerity, and truth accomplishes no victories without it."—(Edward Bulwer-Lytton)

"Nothing great was ever achieved without enthusiasm."—Arthur D. Becker, D. O.

Dr. Judd L. Koch was recently married to Miss Mary Grove of Pataskala, Ohio. Dr. Koch graduated from Still in 1932 and has since then been located in Mount Vernan, Ohio. Congratulations, Judd!
Assemblies

February 12

Following music by the college band, the seniors emceed a movie recently issued by the Central Office. This is a composite of the several films sent in by some of our members. The film is not complete but is being edited and when finished will certainly give any prospective student an excellent idea of the variety and quantity of equipment necessary for the proper education of an Osteopathic Physician. After the show, students and music closed the assembly.

February 19

The Phi Sigma Gamma fraternity in charge of the assembly secured the services of Mr. Dwight James, attorney for the osteopathic association in the State. Mr. James acquainted the students with the trials of the profession, and touched on several subjects that aroused considerable interest in this informative. The old adage of "Do or die" might well be applied to much of what Mr. James said. We hope to hear from him again in the future.

February 26

Following the usual opening number by the band the auditorium was darkened and the student body witnessed an interesting movie of an operational demonstration of the kidney. These educational films are secured through the courtesy of Davis & Geck, of Brooklyn, and are exceptionally well done.

March 5

In the spring a young man's fancy turns to a certain well-known subject. Old man Halladay turns his fancy to what he calls God's Country, which is the great Southwest. Dr. Halladay's travels have been largely in this territory, and with the possibility of summer finally arriving, he gave us a taste of what he might expect in the great state of Arizona. This enjoyable travel film was fully appreciated, especially the scenic beauty during the Christmas season.

Girls Basketball

Just as we go to press, the State Girls' Basketball tournament is in progress at the Drake Fieldhouse. Dr. Halladay has assigned Clarisse Keft, Dorothy Pape, and Evely Ketenma to the sixteen teams who are playing. These Senior girls will spend the entire day in relays at the Drake, assisting the coaches and players from all over the state of Iowa. The tournament, which started March 3rd, finishing Saturday, March 13th.

Mrs. J. Hayward Friend—wife of Dr. J. H. Friend of Milwaukee, Wis., died Feb. 24th. Sympathy is extended to the bereaved family by all of the students.

Dr. J. E. Freeland—secretary of the Osteopathic State Board. Dr. Freeland has served in this capacity for thirty-two years and it will be hard to think of any one else in this office. We wish for Dr. Freeland an equal number of years of fine service such as we have had from the retiring officer.
Contact

That Des Moines offers special advantages to the student of Osteopathy was proved again this past month in the Athletic Clinic. Three girls, members of the graduating class, took care of sixteen girls' high school basketball teams during the state tournament held at the Drake Fieldhouse.

The following week five Senior young men made the same contribution at the meet for boys taking care of the sixteen teams entered.

During the first week of April eight members of the Junior A Class worked from 2 p.m. until midnight for three days, introducing osteopathic care to over 400 wrestlers who came to the Y.M.C.A. at Des Moines to compete in the state tournament.

Drake Relays are just ahead and our Seniors will be out there giving osteopathic aid to contestants from all over the United States, and from some of our largest colleges and universities. We think this is a contact that is worth a great deal to the student who is assigned to do this work and it is of considerable benefit to osteopathy where ever these students may go.

Drake Relays are just ahead and our Seniors will be out there giving osteopathic aid to contestants from all over the United States, and from some of our largest colleges and universities. We think this is a contact that is worth a great deal to the student who is assigned to do this work and it is of considerable benefit to osteopathy where ever these students may go.

We cannot help but brag a little. No other college of osteopathy is located so that all of these contacts can be made. Students at Still College work, not only with state and national athletic tournaments but are constantly on the job from the beginning of the school year until the last bell rings, taking care of football, basketball, swimming, wrestling, track and baseball in our local high schools and the Catholic Academy. Each graduate of this college for the past twelve years has had this advantage. Read what one of the girls reports:

Osteopathic Care of Athletes

Osteopathic care is recognized as par excellence in the best care and training of athletes. This fact is accepted by most coaches and trainers, especially when their teams are under the added physical and nervous strain of tournament play. For this reason the coaches of the champion girls' basketball teams of the districts request osteopathic care while their teams are playing off.

(Continued on Page 4)

The Primary Objective

of the

Intensive Post Graduate Week

Will Be to Serve the Immediate, Every-Day Needs of the Osteopathic Physician in General Practice.

** **

Review those things that you may have forgotten. Get in step with the newer developments in the various fields of practice. Get more closely acquainted with the progress of the college. Enjoy the meeting and mingling of many alert minds. Take an active part in the round table discussions. Examine the available clinics.

** **

In Osteopathic Practice and Technic,

in Surgery, in Obstetrics, in Pediatrics, in Gynecology, in Dietetics, in Eye, Ear, Nose and Throat, in Proctology, in Diagnosis, in Neurology, in Athletic Injuries, in Foot Work, in Physio-Therapy—the Useful, the Practical and the New will be discussed, demonstrated and applied.

** **

Share With Us the Good to be Gained in a Full Week of Work and Pleasant Associations.

The Review Week

For accommodations near the college during the week of review, write to either the Victoria or Brown Hotels. These are a short distance away and will be most convenient for you. Those of you who belong to either the Phi Sigma Gamma or the Atlas Club should write to the House here and perhaps the boys will be able to take care of you for the time you expect to be in the city.

Numerous calls have come in for a demonstration of the anatomy of the inguinal region, due to the interest in the injection method for hernia. A cadaver will be available and may also be used for other surgical demonstrations. Dr. Halladay will dissect the inguinal Canal and show you the relations of all the structures there.

The detailed program with hours and time of each instructor will appear next month. Be here for the first bell and you will stay through until the last word is spoken.

The General Clinic

Not only have we been too busy with the quantity of outside work for our Seniors but the clinic held each Monday, Wednesday and Friday at the college, has been making records.

One hundred twenty-two New patients entered the clinic, were examined and assigned for treatment during the past four weeks. 2636 treatments were given at the college this past month. Add to this the outside work done in the OB, Bed-fast cases and Athletics and you should realize that Des Moines students have little time for anything else but Osteopathy. One member of the faculty said last week that it had been six months since he had been able to get a treatment. Everyone was too busy!

Patients — the variety and quantity. The training you wished for.

Beware!!!

The profession is again being solicited for membership in an insurance exchange directory and other so-called preferred lists which would seem to promise desirable appointments. Before you send any of these companies any money, write to the A.O.A. and get the latest information on the company. Do not deal with these solicitors unless you know, exactly, how reliable they are.
Freshmen! Psi Sigma Alpha still wants to know, Why You Chose Osteopathy As A Career?
Give us your answer sure by Friday morning, April 3, and be prepared to talk to a roomful of people. We are proud to welcome the following men as pledges to our chapter. They are as follows: George Bunge, of Detroit, Mich.; John F. Halladay, of Detroit, Mich.; Harold Heideman, of Kewaunee, Ill.; Ernie Johnson, of St. Paul, Minn.; Howard Johnston, of Detroit, Mich.; Danny McKinnon, of Detroit, Mich.; Robert Mackay, of Detroit, Mich.; Wilson Simmons, of Detroit, Mich.; Mike Donahue, of Chicago, Ill.; and Dale Widmer of Bloomfield, Iowa.

On April 5th, Dr. Fred Campbell gave a very enlightening talk on "Pneumonia in Practice." Freshmen, Psi Sigma Alpha still wants to know, Why You Chose Osteopathy As A Career? Give us your answer sure by Friday morning, April 3, and be prepared to talk to a roomful of people. We are proud to welcome the following men as pledges to our chapter. They are as follows: George Bunge, of Detroit, Mich.; John F. Halladay, of Detroit, Mich.; Harold Heideman, of Kewaunee, Ill.; Ernie Johnson, of St. Paul, Minn.; Howard Johnston, of Detroit, Mich.; Danny McKinnon, of Detroit, Mich.; Robert Mackay, of Detroit, Mich.; Wilson Simmons, of Detroit, Mich.; Mike Donahue, of Chicago, Ill.; and Dale Widmer of Bloomfield, Iowa.

Congratulations to all of them! Two very successful practical work nights have been held during the past month included Dr. W. C. Arendt, of Wyandotte, Mich., Dr. V. H. Dierdorff, of River Rouge, Mich., and Dr. D. V. Goode, of Runnels, Iowa.

Extra!! The Atlas Diamond ball team is in the making—so beware!

On Friday, April 9th, we enjoyed a chicken dinner with Drs. Goodfellow, Cash, Larimore and the usual array of other friends. We heard a delightful talk by each and some interesting sidelights of their private practice. We also had the pleasure of hearing Dr. Goodfellow as our guest speaker at our Friday morning assembly.

It seems as though we have in our school a member of the Salvation Army. Is that right, Bill? For Sale—One cheap Buck, very handsome. If you are staring at him, because he is so

News that they too, thoroughly enjoy, is that they too, thoroughly enjoy. We heard a delightful talk by each and some interesting sidelights of their private practice. We also had the pleasure of hearing Dr. Goodfellow as our guest speaker at our Friday morning assembly.

Assemblies
March 19

The occasions Friday morning
when President Becker takes
the floor, must be remembered. About the middle
of each semester it is time to hesi-
tate and take stock of ourselv-
es, for their fruits have been accom-
plished and what is to come and
none can take up the facts of
college life and weave them with
the words of President Becker. This "renewal" talk
was presented March 19 and
left the assembly that morning
with its members more straight-
forward and our step firmer.

The intervening Easter Vac-
ation certainly was not the best
of holidays, but from reports, the
was well spent and enjoyed, as
many took advantage of the short
journey home for a
day or two.

April 2

On April 2 the Delta Omega
Sorority presented the student
group with a speaker of great
talent, who painted a realistic
picture of foreign lands. Rev.
John A. K. W. Jenkins, pastor of
John's Lutheran Church, near
the college, recently made a trip
to Europe. In his own delightful
way he reviewed some of the
high lights of this trip and all
want to hear more of this jour-
ney. The assembly time on that
twas far too short for
everyone present, including the
speaker.

April 9

The Iota Tau Sigma Fraternity
through a prearranged coin-
cidence presented to us two of
their grand officers on April 9.
Dr. L. S. Larrimore, of Kansas
City, Mo., spoke briefly. We are
sure that he could have taken
more time, but Rev. Goodfel-
low, of Hollywood, California,
was then introduced and took as
his theme, "Current Develop-
ments in Osteopathy." Dr. Goodfellow
is not unknown to our student body.
This is the second time he has
visited our college and we know
that honor, for he is an alumnus
of our college. It is needless
to add that he is thoroughly osteo-
pathic and his talk was all too
short. Dr. Goodfollow stressed
the need for more of our
profession in the smaller commu-
nities to carry on a general prac-
tice. His trip, which extended to
the east coast, was in the inter-
est of the fraternity largely but
also to show his students what
is to come and what is to be
awaited.

Dr. and Mrs. T. O. Lashlee-
of Jackson, Tenn., announce the
arrival of a son, Junior, March 24th.

As Chicago

Dr. Fred Still, general pro-
gram chairman, gives the follow-
ing information in regard to the
students who have been assigned
to be used in the Chicago Hubl-
kan named in the Chicago Herald-Examin-
er, March 29th. I am sure many
will like to read such things for
their own thoughts—especially since
we have no exclusive, non-allo-
cated products, but all those who were
medical doctors—H.V.H.

From a letter: "I have been
a practising physician for 47 years,
practising in the hospitals of battle
fields, in the Brazil jungles and
for 19 years in a smaller West-
ern city. Surgery has made pro-
gress, but I think we still have a
long way to go and how to get there,
will be discovered by the
form of this letter, which was sent to
the college from a friend who
was medical doctor—H.V.H.

Osteopathy Without Limitation

Professional Idealism

If you measure your success in practice is of the
you are a commercialist. If you
measure your success in practice by
the service you are able to
render, you are a professional
individual.

I am not setting up any argu-
ment against the commercial
world. All men are the greatest
industrialists, who have had a
career and a better and more pleasant
world in which to live. We owe an
overwhelming debt to those
great minds that have made the
luxuries of yesterday the necessi-
ties and the common
properties of morning. But in the
big and important place in the
world of affairs and they occupy
it. They have their ideals and they
reach them.

When I meet a physician and I
ask him, "How are things go-
ing and how is the practice?" he
answers, "Just fine, I did $400.00 last month." I
know his mind and I know his inter-
est. If he says, "I have lots of
business, but collections are not
so good and I am much discour-
gaged," I do not feel critical or
constraining, but I know what his idea of success
is.

When I meet a physician and I
ask, "How are things going
and how is the practice?" and he
answers, "Just fine, I did $400.00 last month." I
know his mind and I know his inter-
est. If he says, "I have lots of
business, but collections are not
so good and I am much discour-
gaged," I do not feel critical or
constraining, but I know what his idea of success
is.

If we give first place to
services and the new and continued
development of osteopathy, the greatest
contribution ever made to the
healing art, it is evident that osteopathy
must be: how good a college
can we build and how much
may we contribute to assure the
student body the benefits of
medicinal osteopathic physicians.
As physicians, our first thought
must be: how valuable can I
make my work to patients,
to my community and to my
profession.

—Arthur D. Becker, D.O.

3:00—Case Histories—Dr. J. P. Schwartz.

4:00—Osteopathic Technique—Dr. Arthur Allen.

Oklahoma

The 34th annual state convention will be held at the Skirvin Hotel in Oklahoma City, on May 12-13. An excellent program has been planned, with plenty of entertainment for all.

Dr. W. J. Morrison—of Anita, Iowa, sent us an interesting report of his visit with one of the basketball players during the recent district tournament. Dr. Morrison, being on the job, did much of a lesion in the boy’s neck, which was acquired during the play, and enabled him to continue through the game, even to shooting the final basket which won for his team. Good work, and timely!

Contact

(Continued from Page 1)

the Iowa State Basketball Tournament.

Every year the Des Moines Still College of Osteopathy sends out senior, students, especially members of the senior class, to work on the various coaches in their care of the girl athletes.

Last year I had Helene P. Johnson, hostess to the visiting teams, at the Drake Fieldhouse, offered the use of her private office to the student osteopathic physicians and there they were kept busy treating floor burns, blisters, taping ankles and knees, working out the Charlie horses, and meeting, to the best of their ability, any emergency which might arise. Their services were greatly appreciated by the coaches and gratefully accepted by the basketball girls.

Space limits us to this one report. The others were nearly the same. These Senior girls know when to make contacts with athletes of their own sex and they know what to do when they are injured.

The report from the eight Juniors who took care of the boys entered in the state wrestling tournament is the same. We quote one of these in his own words so you can see just what a student really gets out of this type of clinical practice:

Wrestling Tournament

The tournament, to me, was very beneficial in many ways. First of all, along educational lines. It was my first experience with the care of athletes. Many types of men, boys and youths were encountered. Also shapes, sizes and weights.

Working over the boys I found that they responded very readily to the treatment. By this I mean that when our soft tissue work was done, I could detect to my satisfaction the relaxation of muscles more than ever before.

Our duties were to administer first aid to injuries, which were many. The most common of these were floor burns and mat burns causing the knees and elbows. Cleaning the area thoroughly and placing on collodium made the part quite comfortable after the stinging sensation of the application left.

I found that the taping of the knee, shoulder, elbows and ankles might be a little touches rather than to do a job. One day, came in extremely handy. I had one boy from Ottumwa, in the 115 lb. class, with a very severe deltoid. Previous care had made it quite a handicap. The triangular deltoid taping reinforced on each side enabled him to carry on with success the rest of the evening.

There were many minor cuts, bruises and old infections, especially on the shin bones. Bandaging and taping them were not aware of their presence.

The amusing side of the experience was when the announce the public address system happens in a game and they are prepared to give the care that is appreciated by the players and the coach.

basket which won for his team. During the play, and enabled him to continue through the game, even to shooting the final basket which won for his team. Good work, and timely!

From Scotland

We have on our desk copies of The Weekly Scotsman, published in Edinburgh. Under the date of January 3, we found a lengthy article which takes up the cause of Osteopathy. It was written by an author who is quite fair. The writer would like to see the dirt cleaned from the Osteopathic profession for he believes there is a great deal of truth in the osteopathic concept. It is well written and if read with an open mind, will help where help was needed in England and Scotland.

The following week, Dr. W. K. Macdonald, president of the British Osteopathic Association, replied, congratulating the author, who is unknown. Both replies were dignified and showed the writers to be gentlemen and scholars as well as physicians.

“Vette Kell”

The Atlas Club has the social spotlight focused on them as they prepare to present their annual spring dance at the newest and most modern ballroom, the Tommar, Friday April 23rd.

Arrangements have been completed whereby “Vette Kell and His Orchestra” will make a trip from Iowa City to provide the music of “Vette Kell” and his exceptionally skilled arrangements of present and past favorites are sure to make him many new friends as his radio presentations and many personal appearances throughout the country indicate. Present indications tend to assure a grand success for this enterprise, with dancing from ten to two, and an admission price of only one dollar per couple. The boys rightfully look forward to support from the student body as well as members of the profession.

I took care of. Smith had a stiff neck, so I corrected the cervical lesion which was present. I treated the first six fellows at the half and after the game I treated all ten men. While they were in the shower room someone turned the hot water on Kennedy and his back was scalded. I covered it with a calamine and took care of Cornwall’s ankle. They seemed pleased with the care I had given them and took me out to dinner after the game. They said they would want someone next year when they come back. They are sure they are only losing one man.

Maybe you are not a fan but some of us have liked this job, we are sure. Those senior students are learning by actual contact just what happens in a game and they are prepared to give the care that is appreciated by the players and the coach.
The Des Moines Still College of Osteopathy cordially invites members of the OSTEOPATHIC PROFESSION to join with us in Six Days of Intensive Study and Demonstration.

**NO TUITION CHARGE**
Your only expense will be your usual expenses, which should not be much more than if you were staying at home.

**GRADUATE OSTEO PATHIC PHYSICIANS ONLY**
The course is not open to the public nor to any physician other than a graduate of our own science.

**REGISTER AT THE COLLEGE OFFICE**
The office is on the second floor of the college building, which is located at 722 Sixth Avenue.

THE LOG BOOK

FRATERNITY NOTES

ATLAS CLUB

(E. M. I.)

With another year just about over, we find the boys eager to get through their finals and back home for three more months. With heavy hearts we look forward to this year's graduation, for we will lose four good men from our active chapter. Brothers Eddy, Evans, Ketman and Stinson are soon to get their degrees and may their success and happiness be unlimited.

Election of officers for the coming year was held at our last regular meeting. Officers for the coming year are: Noble Skull, Henry Leslie; Ocelplial, Marcus Gerlach; Pylorus, William Costello; Stylus, Howard Johnson; Sacrum, George Bunge; Receptaculum, Jon Hagy; Styloid, John Engeman.

Entering the Queen of the Drake Relays was the high light of the evening at our annual reception, Friday evening, April 23, at the Trojan Ballroom. The dance was a huge success and we are looking forward to this event next year.

Dr. Arthur P. Wheelock, local optometrist, was guest speaker at this event next year. Dr. Glenn Bigsby of Macksburg, Iowa, was a visitor at the house during the past month.

Blackwood, Sporck, Barnes, Wollof and Still were present at the first degree on the following men: Blackwood, Sporck, Barnes, Wollof and Still.

The chapter wishes to extend to all the fraternity its best wishes for next fall. Here's hoping that 100 new freshmen will be here in September.

The sorority girls went on a weiner roast out to Greenwald Park, April 30th. Initiation of Sigma Phi Epsilon was guest speaker. Geppa Harris and Carol Ketman were guests; also Bobby Slocum and Bobby Paul, small sons of Ruth Ketman. In the Queen of the house, one had a good time but they all claimed they ate too much and felt terrible the next day.

The Black Hills and The Bad Lands, sponsored this year and managed by Jolley and Dresser. This is the second year of nineteen games, nosing the competition.

The fraternity awarded two cups to the January graduating class: one for Service to the College and the other for Loyalty and Sorority banquets. The transportation facilities failed to give any relief.

The sorority wishes to extend congratulations to Mary Beth Zeigler, Dorothea Failing, and Clarise Keift, who will graduate on May 28th.

Election of officers for the fall semester will be held Monday noon, May 17, in the school library. All members are requested to attend.

May Calendar

- Keep these dates in mind. The next three weeks will be busy ones here at the college. We have our dates circled in red and we hope you check some of these and plan to be with us:

Board and Faculty

A final check on students and faculty was the major reason for the Board and Faculty meeting held May 7th. Everything is set and the faculty members are assigned and we call your attention to the front page again with a complete detailed program. We of the Board and Faculty of the College will be looking for you!
The May '37 Class

We Introduce...

Alan Becker of Des Moines, who will finish the Mo. Board and also take the Michigan exam.

Harlan Robenhous of Des Moines, will take the Iowa Board.

Gene Bechtold of DeKalb, Ill, will take the Iowa Board.

Austin Brill of Des Moines, will take the Ohio Board.

Robert Cook of Des Moines, will take the Florida and Iowa Boards.

Reid Campbell, Des Moines, will take the Iowa Board.

Hal Drosser of Kennebunk, Maine, will take the Maine and Iowa Boards.

Don Evans of Detroit, Mich., will take the Michigan Board.

Jack Eddy of Highland Park, Mich., will take the Michigan Board.

Dorothy Fallong of Oak Park, Ill., will take the Michigan Board.

Joe Guerrera of Lawrence, Mass., will take the Massachusetts and Rhode Island Boards.

C. W. Hammond, Jr. of Bar- tonville, Okla., will take the Iowa Board.

Bernard Howland of Stony City, Iowa, will take the Iowa and California Boards.

W. W. Jolly of Ottumwa, Ia., will take the Iowa Board.

Earl Jurgenson of Truman, Minn., will take the Minnesota Board.

Clarise Keft of Muskegon, Mich., will take the Iowa and Michigan Boards.

Henry Ketma of Des Moines, will take the Iowa Board.

Don Littlefield of Des Moines, will take the Iowa Board.

Hal Morgan of Des Moines, will take the Iowa and California Boards.

J. R. McNerney of Des Moines, will take the Iowa Board.

John Patterson of Los Angeles, will take the California and Iowa Boards.

Ivan Penquite of Des Moines, will take the Iowa Board.

D. E. Ryan of Springfield, O., will take the Ohio Board.

Graham Stewart of Brusseis, Ontario, will take the Iowa Board.

Harry Stimson of Detroit, Mich., will take the Michigan Board.

Al Wolfe of Detroit, Mich., will take the Ohio Board.

Ralph Young of Lebanon, O., will take the Ohio Board.

Frances Yuuki of Riverside, Calif., will take the Massachusetts Board.

Marybeth Ziegler of Cincinnati, Ohio, will take the Ohio Board.

We have said this nearly every time we have made a list like this: Note where they are from and where they are going. Those of you who want more osteopaths in any community must work a little harder to get the young folks interested in Osteopathy as a vocation. We need the fine letters from osteopaths in practice asking how they can interest the young man or woman in our science. Direct contacts are likely the best. Get into the preparatory schools and give vocational talks and keep at it. One is not enough.

This class leaves a place to be filled. We are depending on you to replace them with students of equal calibre. You are young; from now we can repeat the nice things we have said about this group.

At Boston

Dr. R. E. Bachman of the faculty, returned May 2nd, from a trip to Boston and vicinity, meeting with the New England Osteopathic Association. He appeared enthusiastic in his report, discussing subjects within his specialty, the practice and teaching of Obstetrics.

He reports a fine meeting of about 150 among whom were many old friends. Two highlights of the trip seem to stand out in his memory when quizzed as to the main events. Dr. Gorman took him for a ride. This was of the information type however and he enjoyed the opportunity of a visit to the Osteopathic Hospital and School. On Sunday he was the guest of Drs. R. W. Wilson of Cambridge and Dr. Wilson was not to be outdone by Dr. Gorman. Dr. Bachman enjoyed the famous ride taken by Paul Ryan, and one better had lunch at the Wayland Inn.

Many other historic spots were visited and these special entertainment features together with the pleasures of meeting the New England group, made the trip an outstanding one with the speaker.

To Detroit

On Wednesday, April 21st, Dr. Arthur D. Becker, President of the College, and Dr. Clay Osteopathic Association of Detroit, Michigan, at the Book-Cadillac Hotel on the subject of the Classification of Cardiac Diseases.

On Thursday, April 22nd, he assisted with the Highland Park Osteopathic Clinic Day, presenting clinical cases. He also gave a talk on Cardiac Diagnosis.

More than 125 osteopathic physicians were present at these sessions. They were an interested and interesting group. Dr. Becker says, "It is a real inspiration to meet with such a fine, enthusiastic gathering of worth while osteopathic physicians and surgeons, and I shall look forward to a return engagement."
The osteopathic profession of the State of Iowa met in annual session at the Savery Hotel, Des Moines, May 5 and 6. It was a fine meeting, the members often gathering from reports of the program to get the full story and information. Mr. Dwight James, legislative counselor, also spoke briefly and inspired a greater confidence in the association by his forthright statement. The introduction of wives on the speakers dais, concluded the banquet.

Before dismissal, Dr. Schwartz announced that the Auxiliary had planned a dance, which would begin immediately. This was attended by many present and augmented by students from the college.

Thursday noon a luncheon was held in the Annex of the Savery, at which Dr. H. V. Halla presided. This was attended by about one hundred and was thoroughly enjoyed, for it was not a series of talks, but music by the college band, a vocal trio and legere de main by Don Leary, a student at the college. The luncheon and time disappeared altogether too quickly.

The several exhibitors expressed themselves as well satisfied with the attendance and interest, so it must have been a good state meeting.

State Boards

West Virginia

The next meeting of the West Virginia Board of Osteopathy will be held June 14 and 15, 1937 at the offices of Dr. Guy E. Morris, Secretary, 545 Em- bly Bank Bldg., Charleston, W. Va. Application blanks may be secured by writing the Secretary at the above address.

The several applications should be filed not later than June 1, 1937.

South Dakota

The South Dakota State Board of Osteopathic Examiners will hold its next examination on June 2 and 3, 1937. Anyone wishing to take this examination should write to the Secretary for an application blank and for further information.

C. M. Shekels, D. O., Secy.
321 So. Phillips Avenue
Sioux Falls, S. Dak.

Iowa

The Iowa State Osteopathic Board will meet at the State House, Des Moines, on May 31, June 1 and 2.

Fraternity and Sorority Reunions

Except for delayed replies to a few letters, the work of the Interfraternity Council has progressed satisfactorily. Arrangements for the conven- lence of all members of the Coun- cil will have been completed. Those wishing to attend the annual national meeting and will meet with your organization, please note the following items that are of interest.

When you register at the A.O. A. desk and follow with your registration with the local com- mittee, you will be greeted with a quiet nook and take stock of what has happened.

The Interfraternity Council provides an excellent registration desk for ten of our fraternities and sororities. You sign a card giving the information as to at which floor your fraternity or sorority is located. This is for your convenience and you cannot miss it.

You will purchase a ticket to your Annual Reunion Banquet and business meeting. All information relative to your fraternity or sorority is doing at the convention will be available at this desk. This is for your convenience and you cannot miss it. This is the time for you to want to attend your own fraternity or sorority meeting.

The Acacia Club will have its banquet Tuesday evening, July 6th, at 7:00 p.m. This will be held at the Stevens Hotel, in room 506A, which is on the fifth floor.

The Alpha Tau Sigma Fra- ternity will meet Tuesday evening, July 6th, at 6:30 p.m. at the Stevens Hotel, in room 502 on the fifth floor.

The Delta Omega Sorority will meet Tuesday evening, July 6th, at 7:00 p.m. and has reserved the Medinah Club at 506 North Michigan Avenue for its banquet and entertainment. Special entertainment features will be presented.

The Delta Nu Fraternity will meet Tuesday evening, July 6th, at 6:45 p.m. and has reserved room 412 on the fourth floor of the Stevens Hotel for our business meeting and entertainment.

The Delta Sigma Mother's Reunion group will meet Tuesday evening, July 6th, at 7:00 p.m. and has reserved the Medinah Club at 506 North Michigan Avenue for its banquet and entertainment. Special entertainment features will be presented.

The Theta Psi Fraternity will meet Tuesday evening, July 6th, at 6:30 p.m. at the Stevens Hotel, in room 412 on the fifth floor.

The Phi Sigma Gamma Fra- ternity meets Tuesday evening, July 6th, at 6:30 p.m. on the fourth floor of the Stevens Hotel. A fine banquet and entertainment is promised.

The Pi Sigma Alpha Fraternity will meet Tuesday, July 6th at 12:00 M. Note that this is a noon luncheon and will not interfere with any other meeting also with his social fraternity.

The Phi Sigma Sigma Phi Fraternity will hold its annual meeting Monday evening, July 5th, at 6:00 p.m. Members of this fra- ternity are doing at the Stevens Hotel, in room 412 on the fifth floor. This is on the first day of the convention and the officials have promised that the meeting will be a quiet nook and take stock of what has happened.

The Interfraternity Council will hold its annual business meeting Monday, July 5th, at 12:00 Noon in room 412 at the Stevens Hotel. Members of the Council please note this date and time and be there to attend to important business affecting your fraternity or sorority. The meeting will be only the long and is very important.

Look this list over again. If you belong to a social fraternity and also to one of the honorary fraternities, see that you know where and when each meets and be there to help keep your organization on record. The Council is trying to maintain the sev- eral local members are and have to work hard to get things ready for the meeting. The Council has been on the job constantly checking with these members of the fraternity. This is all being done for you, so make it convenient for you to register and meet with your old friends. The Interfraternity Council will have the program and entertainment features. Make this meeting especially attractive to the membership.

The Iota Tau Sigma Frater- nity is planning to have its annual banquet Tuesday evening, July 6th, at 7:00 p.m. on the third floor of the Stevens Hotel and has reserved room 412 for their banquet and entertainment. The Theta Psi Fraternity will meet Tuesday, July 6th.

Mr. Bachman, daughter of Dr. and Mrs. R. B. Bachman, entertained the assemblage with numbers on the harp.

Following the introduction of the several who had contributed to the arrangements for the meeting and banquet, Dr. Schwartz called upon his list of speakers. Drs. Hildreth, Arthur Becker, Laura Miller, Woods, Chappell, French, Gordon, and Hannon, all responded with short talks, each having a message which pointed an interest in osteopathy. The introduction of wives on the speakers dais, concluded the banquet. Before dismissal, Dr. Schwartz announced that the Auxiliary had planned a dance, which would begin immediately. This was attended by many present and augmented by students from the college.

Let's make this the largest re- union ever to register at an A.O.A. convention!

Yours fraternally,

H. V. Halladay, D. O.,
Ex-president of Interfraternity Council.

Dr. A. L. Montgomery—of Edmond, Okla., died May 3rd, 1936. Dr. Montgomery was a sturdy shock to the college, as Dr. Mont- gomery had recently visited us and seemed to be in perfect health. He was on the Fraternity Council in January '36, having been awarded honors in Obstet- rifles and Service to the college. His name will be remembered for a long time.

During the several courses, Miss Enid Bachman, daughter of Dr. and Mrs. R. B. Bachman, entertained the assemblage with numbers on the harp.

On the day following his death, Dr. Schwartz was posthumously re-elected by the membership present. The in- troduction of wives on the speakers dais, concluded the banquet.

Before dismissal, Dr. Schwartz announced that the Auxiliary had planned a dance, which would begin immediately. This was attended by many present and augmented by students from the college.

Thursday noon a luncheon was held in the Annex of the Savery, at which Dr. H. V. Halla presided. This was attended by about one hundred and was thoroughly enjoyed, for it was not a series of talks, but music by the college band, a vocal trio and legere de main by Don Leary, a student at the college. 321 So. Phillips Avenue
Sioux Falls, S. Dak.

Iowa

The Iowa Osteopathic Board will meet at the State House, Des Moines, on May 31, June 1 and 2.

Dr. E. M. Scheffter—of Grand Rapids, Mich., recently de- parted a hydrotome for a time. He says that Dr. Bachman's ex- cellent instruction enabled him to carry the course through with our serious problems.

Dr. and Mrs. Raymond Bachman—of Flinchtown, Mich., announce the ar- rival of Jacqueline Diane, April 27th.
You'll Be Seeing Us!

At least ten members of the faculty of the Des Moines Still College of Osteopathy will be at the Chicago convention and will appear on the program. Aside from their appearance many of them are acting in official capacities. We know you will want to meet and talk with one or more of them and you will want to hear what they have to say on the program. Look thru this list and jot down a memo to help you. Look the official program over carefully and mark in red the talks you "must" hear.

* * *

Dr. Arthur D. Becker—President of the college, is on the general program and will also appear in the technic section. He will also be busy as a member of the official family, being one of the A.O.A. Trustees and will attend the meetings of the Associated Colleges. The Bureau of Professional Development will take some of his time and he may be called upon to do some radio broadcasting.

* * *

Dr. Robert B. Bachman—Professor of Obstetrics and Gynecology at the college, is to talk on the general program and the Obstetrical Section. Being also President of the American College of Osteopathic Obstetricians, he will attend their meeting, which takes place before the regular A.O.A. Convention. He speaks before this special group.

* * *

Dr. L. L. Facto—Superintendent of the clinics of the college, is chairman of the Technic Section of the Convention. Aside from his special duties with the Technic Section he will talk before the section on Nervous and Mental Diseases.

Dr. Glen E. Fisher—Professor of Chemistry at the college, will appear on the program with a paper on Comparative Therapeutics and will also attend the meetings of the Associated Colleges.

* * *

Dr. Mary E. Golden—Professor of Pediatrics at the college, will speak before the Foot Section on and Arch Technic. Dr. Golden is President of the O.W.N.A. and will give a report of the activities of the association before the general assembly. Her duties as an official will take much of her time.

(Continued on Page 3)
Band Banquet

There is an old custom that comes up for recognition each May. Virg has to take his turn this year even if they do not deserve it. This year the date fell on May 14th and Friday, which was a little late for chamber music lovers who anticipated steak. With the exception of a couple of members of the TBC (Toot-Bang-Club) and no one eating anything for three days, the repast was held at the Chamberlain and was a special order of back rubs and scalloped potatoes en caserole. No special ceremony ever follows this dignified assembly, as it seems to naturally blend into a bull session which is broken up only by OB calls or previous engagements to play for some dance or social function. The remarkable item noted at this banquet was that the same bunch would be heard speaking with the same appetite. Not a member of the orchestra graduated. Maybe that is telling something.

Assembly, May 14

Following a number by the orchestra the Psi Sigma Alpha fraternity took charge of the meeting. Judge Ralph L. Powera was introduced as the speaker and filled the time with an address that would have been applicable two years ago. This was not the first appearance of Judge Powera at the college and we hope he will be able to speak to us again each year, or more often.

Before closing the assembly Alan Becker announced for the fraternity the results of the contest sponsored by Psi Sigma Alpha which was an essay to be written on the subject, "Why I Chose Osteopathy As A Profession." Glen Walker of the June '40 Class, won first place and received a gold pocket watch and a set of twin thermometers. Dr. Becker took occasion to announce the results of his own research, "The Tendinous Principle." Lloyd Jackson of the same class received the second prize, a stethoscope. Georgiana Harris of the Jan '41 Class placed third, being awarded a set of twin thermometers.

Assembly, May 21

Senior Assembly, May 21

There are two good reasons for excitement at the last assembly of the year. There is the chance to see a display of Senior talent that is not discovered until the last minute and it is the last assembly of the year. This element and the realization of weeks of anticipation make it a crowning event.

The orchestra under the direction of Dr. Halladay, rendered the opening number. The assembly was then turned over to the program. There was no one, who in turn asked for the baton. This historic stick was given into the hands of Alan Becker, who was dubbed the name of a popular band leader heard frequently over the air.

Don announced our sudden transportation to a night club and unproclaimed Cabaret. This was not the first appearance of Judge Powera at the college and we hope he will be able to speak to us again each year, or more often.

Convention Outing, July 7th, Afternoon, Evening

Through the co-operation of the Chicago Park District the local executive committee has been able to arrange an afternoon and evening of recreation that is without precedent in osteopathic circles. Chicago's parks and boulevards are the envy of metropolitan centers throughout the world and organized activities of the Chicago Park District are used as models almost everywhere. In particular the recreation program is one of the most intimate. It seems to naturally blend into a ballroom of the hotel. (Dress optional.)

Review Week

(Continued from Page 1)

The library fund of the college.

In addition to the personal thanks offered to various members of the faculty, Dr. Arthur D. Becker, speaking for the college, expressed the happiness of the college and all those associated with it in being able to offer the group the course as outlined in previous editions of the Log. They let us know that next year we hope that they will be able to return next year, bringing with them additional members from their communities. Before dismissal, blanks were passed around, asking for suggestions for the week next year, many of which were returned with excellent ideas.

We renewed acquaintance with some old friends. We hope we made some new ones and all of us had a week that was as exciting as a new convention in years. We enjoyed it to the very end.

The Sacro-Iliac Group

The International Society of Sacro-Iliac Technicians, a postgraduate Section of Special Research in Osteopathy, of which Dr. George W. Goode of Boston, Mass., is president; Dr. F. P. Millard of Canada, is vice-president; and Dr. Helen G. Sheehan is secretary-treasurer, will have its annual meeting at the Congress Hotel, July 4, 1927, at 9:00 a.m.

Delegates will be present from Canada, Ireland, Scotland, England, France, and several other foreign countries, and the United States. All members of the Society are urged to be present.

In the evening the Chicago Park District will give a special major display of beautiful Buckingham Fountain, which is located opposite the Stevens Hotel. It can be seen very advantageously from the roof garden of the hotel. Buckingham Fountain is finished of red Georgia marble set in the center of Grant Park and surrounded by formal gardens. It is 280 feet at its greatest diameter. The center column, a 40-ton piece, practically to a height of 90 feet, is surrounded by a series of smaller fountains which play into the pool. There will be enormous all the fountain is protected by life guards. There are courts for tennis, soft ball, quoits, etc., and the necessary rest place for those who wish to play these games. The archery range will be available for you to try your skill.

In fact there will be a diversification of activity that will serve some appeal for every taste. You may participate in the sports, watch the exhibits and dancing, or relax under the shade of a tree or on the beach. If the weather should be unfavorable there is a field house sufficiently large to conduct an inside program.

Following the evening entertainment at the hotel a picnic lunch will be served.

A Matter of Policy

"A stream rises no higher than its source." I’ve forgotten who said that, but it is true and beyond controversy. Your practices will not be more osteopathic than you are. It is good policy as well as best practice for an osteopathic physician to try osteopathy first and yet, for the excellence of the client, to incline toward osteopathy, you must give them an opportunity to judge of the merits of osteopathic methods and of osteopathic treatment to the exclusion of mind confusing adjuncts.

I recently had the pleasure of listening to a sermon in which the speaker said, "No nation knows whether Christianity will work or not, because no nation has ever tried it." Osteopathic diagnosis and osteopathic treatment plus religion, the above quotation will solve most problems of human ability, if given a fair opportunity to do so.

It is impossible to get the fine flavor of a cup of coffee, if you put a spoonful of vinegar in it. You will never know the full value of osteopathic treatment if you always mix it with other types of treatment. The way to find out what a fish is, is to put it at the end of it firmly into a crevice in a rock wall and then hang your full weight upon the other end.

A prominent osteopathic physician attending our recent week of "Post Graduate Review and Clinic" said, "We do not begin to know the full value of osteopathic techniques when used to the exclusion of all things else and the great problem today is to sell osteopathy to the osteopath."

Conscientious young minister consulted his bishop, saying, "My sermons seem to lack force and effectiveness and are thoroughly discouraged." The bishop said, "I’ll come and hear you preach." The following day the young man inquired, "Do you not want me to bear the bishop’s conclusion?" The bishop said, "Just put one shot in your gun."

-Arthur D. Becker, D. O.

"Mr." Pocock—better known to us as Dr. Hubert Peter Pocock—was quoted for over half a column in a recent issue of the Toronto Daily Star. Dr. Pocock told "em" about the osteopathic situation in the Province of Ontario.

Special Clinics

All cases must first be examined in the regular convention where they are admitted to any of the special clinics. These special clinics: eye, ear, nose and throat, pediatrics, fractures of the lower extremity, and the great problem today is to sell osteopathy to the osteopath.

In the special clinics the examining physician goes over the case, explaining to the students the kinds of cases, the findings and the type of treatment that is indicated in this case, but regardless of what special treatment he recommends, he either explains the importance of the general osteopathic treatment or that is indicated in this case, but regardless of what special treatment he recommends, he either explains the importance of the general osteopathic treatment or that is indicated in this case, but regardless of what special treatment he recommends, he either explains the importance of the general osteopathic treatment. The blood and urine examinations are considered a part of the general osteopathic treatment, so do come under special clinics.

President's Letter

Dear Doctor:

As a member of the osteopathic profession you are interested in knowing just what is happening in osteopathic circles of this state. Also, as president of the Iowa Society of Osteopathic Physicians and Surgeons, I am eager to have you know and be interested in the things we are doing. So I am beginning a series of letters to all osteopathic physicians in the state in an effort to do this. Help me to make these letters interesting by sending in every item of interest you can.

Get out your records for the past year and add up the amount you have saved for insurance companies for services to injured employees. Did you know that if the Legislative Council did not know what the osteopathic profession in this state had not been on the job this source of income would have been taken away from us at the last legislative session?

Have you ever tried placing an applicator stick in the test tube while boiling with a little water; then let it boil for a few minutes? This is one of Benedict's sugar tests. It keeps the solution from boiling over.

Doesn't it seem good to have practice and collections improving as they have? Here is hoping we are going to do some good for the grasshoppers in the southern and western parts of the state next July.

Do you know of any good locations in the state? Send in the names of the towns with all possible details to me and I will see that they go to men entering practice in the state next month. Remember when you were new you were not so sure as to where to settle.

The "Log Book" has been most courteous in giving space to our society. They would appreciate it if you would send them applications in the state? Send in your applications and let us go places and do things.

Sincerely,

John M. Woods, D.O.

Vice-President, Dr. W.C. Chappell of Mason City, was appointed by Dr. H. E. Litton, the retiring chairman, and is serving as the State Publicity Officer of the O.A.O. Public and Professional Welfare Committee. It is hoped that all A.O.A. members will be interested in, and subject to provisions of the Iowa Society By-Laws, within thirty days: Mabel Andrews, Perry; B. E. Atkinson, Boone; A. C. Bumford, Council Bluffs; W. M. Burke, Harlan; L. H. Carleton, Brooklyn; E. V. Chance, Winfield; V. A. England, Des Moines; D. V. Grode, Moline; W. C. Gordon, Sioux City; H. V. Halladay, Des Moines; H. L. Hinton, Cedar Rapids; Phil McQuaid, Moline; M. D. Quirk, Audubon; Martha Morris, Clarinda; E. H. Phillips, Garner; A. G. Shook, Seymour; H. B. Stillwell, Elkhart; Nina D. Thompson, Des Moines; L. A. Utterback, Perry.

Do You Love Music?

If so, you will want to avail yourself of the opportunity which is offered for a "Festive of the Soul." Symphony concerts can be heard in Grant Park, opened Thursday, July 5, 1927, by Dr. Frederick Stock, the famous conductor of the Chicago Symphony Orchestra. These are open-air concerts, free to the public.

If you have an eye for the beautiful you will want to see the Buckingham Fountain, also in Grant Park. This is one of the outstanding attractions in Chicago and is visited by thousands, especially in the evening when the wonderful color display is operating. There you can enjoy an hour and at the same time rest your body and spirit. The fountain in action can be seen from the window of the Stevens Hotel.

Dr. H. R. Bynum—President of Mason City, sent us an announcement of his P. G. Course of Applied Foot Technic. The date of the first course is June 15, and the second course June 22. Dr. Bynum expects to conduct a class each month. Special preparation for the teaching and experimental work includes a new clinic building, completely equipped.

Mrs. R. T. Van Ness Dies

We extend our sincere sympathy to Dr. R. T. Van Ness of Columbus, Ohio, who suffered the loss of his wife on May 13. Mrs. Van Ness had been suffering for some time with cancer and operative procedures had not been able to eliminate completely the deeply seated pathology.
Successful

The 41st Annual Convention of the American Osteopathic Association, held in Chicago the week of July 4th, went into history as one of the largest and most constructive meetings in the history of our great profession.

Never were the problems of a rapidly growing and developing profession more clearly visualized or more squarely faced. Never were our obligations and responsibilities toward our profession and our patients more clearly enunciated as the need for a house organ in osteopathic literature. The need for a magazine which our members would look upon as the voice of the osteopathic profession.

New ideals for higher standards of osteopathic education have been determined. New duties have been assigned. New responsibilities and the Initiative and capacity have been discovered. New and higher horizons bring with them new inspirations. The new great convention. It will serve as a milestone in osteopathic progress.—Arthur D. Becker, D. O.

Conventions come and conventions go but the National Osteopathic Convention that met in Chicago, aside from passing, will be remembered as one of the unusual kind and worthy of note for its large attendance, the varied and extensive exhibits and the high standard of papers presented. It was evident that hours of work and study were spent in preparing the subject matter for the benefit of all present. The most spectacular informative and convincing proof of the value of osteopathic therapy was the report of the many clinics and special changes in tissue as a result of osteopathic therapy presented by Dr. Marie E. Baur, Philadelphia.

Each convention is bigger and better, longer and more intensive. In eagerness to get special features over before the big convention, many clinics and special programs are featured the week before which makes almost a two weeks grind for the earnest interested physician.

Saturday, pre-convention, was spent at a very fine "foot" program. Sunday was a hard day and nothing could be hung up the evening of the Ohio W. N. A.—9 a.m. until the finish—but what freedom to have the balance of the week for the main convention. Everyone—men and women—seemed glad to be at Chicago. There was no lack of fellowship. The Chicago group surely "put over" any big event. "Let the youth of the osteopathic world grow up!"—And, what a fine looking bunch.—Mary E. Golden, D. O.

O. W. N. A.

The Osteopathic Women's National Association met in regular session at the Stevens Hotel in Chicago, Ill., Sunday, July 4.

The purpose of this business meeting on Sunday so that the attention of our members may not be detracted from the sessions during the week.

Tuesday noon it was our privilege to have as luncheon speaker the Education Director of the B. C. Miss Judith Waller. She told us quite plainly that in the field of publicity we set up our own hurdles; that people were much more ready to listen about the osteopathic way of life than we realized, and consequently because of our own timidity we were not going places we could and should.

Tuesdays afternoon at the Women's Conference our speaker was Dr. Amy Cochran of California. Her specialty is Physiosynthesis, education of the short muscles, which is very essential to good body mechanics.

The officers for the coming year are:

Dr. Mary E. Golden, Des Moines—President.
Dr. Georgina Smith, Los Angeles—1st Vice President.
Dr. Marie E. Baur, Philadelphia—2nd Vice President.
Dr. Rachel Woods, Des Moines—Secretary-Treasurer.

The Interfraternity Council

At the ripe old age of four years the Council stands up on its hind legs; a denomination has done things and is going places. This year when the officials of ten fraternities and sororities in our profession met to decide their future, certain definite steps were taken to insure the continuation of their work and to define its field of endeavor.

At Wichita it consisted largely of a desk disjoining the regular registration. At Cleveland the desk was moved to the end of the line the second day. At New York it joined the main show and functioned as an old timer. At Chicago it was established as an institution of ancient lineage and we hope in the future that it will continue to serve with added convenience to those of you attending.

You who attended a fraternity or sorority banquet and read some of the convention of the line of workers taking your life history and money. This year at Chicago this registration covered ten such affairs, sold 519 tickets and handled $7,307.25 without an error. Never before was it possible for you to avoid the responsibility of the line. It was not at all that this group of fraternities and sororities set up our osteopathic organizations in the official register of such groups, Balfour Manual. We already have a special listing and we want every one listed there.

We want the power to regulate our osteopathic organizations gradually adding to the restrictions of membership, so that no one can join a fraternity or a sorority listed with the council will really mean something more than the possession of a pin. It will be a mark of distinction.

We are urging and insisting that our members join the state osteopathic associations. No amount of time spent in planning and organizing and we must have the power to do the job. We must have the power to do the job. We must have the power to do the job. The Interfraternity Council should begin with cooperative ideas instilled during student days.

We think that fraternities and sororities should be useful as well as ornamental and unless they prove themselves to be helpful they have no place on our roster. We will see you in Cincinnati.—H. V. Halladay, Executive Chairman.
THE LOG BOOK

D. M. S. C. O. Faculty

Dr. Arthur Becker

Dr. Arthur Becker for the past two years Dr. Becker has filled the chair of president of the college in a very able manner. Coming to Des Moines with an exceptional osteopathic background, it was expected that his initiative and integrity would institute changes, the benefits of which would be felt throughout the entire profession. The college has improved and with Dr. Becker at the helm and the continued services of a board of trustees and faculty held over intact from the past, the institution will continue to advance.

Dr. Becker graduated from the original S. S. Still College of Osteopathy in 1903. This was the first name assumed by the college in Des Moines. In 1909 and 1910 he completed his third and fourth years of training at the American School of Osteopathy and later attended post graduate courses in Chicago and Boston.

For over 30 years he has been active in osteopathic work. He has filled every major office offered by state and national associations. He was elected president of the national association in 1931 and before and since has served as a member of the board of trustees of the national association. His teaching has brought him fame also and his writings may be found in the several publications of the profession. Dr. Becker is deeply interested in civic affairs and is a regular attendant at the weekly meetings of the Kiwanis Club. Golf and touring provide him with outdoor recreation.

Dr. Becker's family reflect the osteopathic influence also. Mrs. Becker is active in local auxiliary affairs and their two sons are graduate osteopaths. Dr. Rollin Becker is practicing in Pontiac, Michigan, and Dr. Alan Becker, a graduate of the May '37 class of Still College, has an internship in one of our osteopathic hospitals.

Dr. J. P. Schwartz

Dr. J. P. Schwartz fills two very important positions at the college. As a member of the board of trustees and its treasurer he is entrusted with the funds of the college. He is also head of the department of Obstetrics, the personnel of which attends approximately 400 births each year. With an experience of over 20 years in both teaching and practice of this specialty he is considered, and properly so, one of the foremost authorities on this subject.

Dr. Bachman graduated from the Des Moines Still College of Osteopathy in 1916. He completed his post graduate work and served an internship at the Des Moines General Hospital and is a licensed surgeon in the state. He is active in state and national affairs and for the past year has been president of the American College of Osteopathic Physicians and Surgeons. He has given him an international reputation. His more recent activities in connection with the care of athletes have made him a demand speaker at many associations.

Dr. H. J. Marshall

Dr. H. J. Marshall is another very busy member of the college staff. He is head of the Eye, Ear, Nose and Throat department of the college, lecturing on the subject and superintending the clinics in this specialty. He is also a member of the board of trustees of the institution. At the Des Moines General Hospital he is one of the staff of surgeons and a member of the board.

He graduated from the Los Angeles College of Osteopathic Physicians and Surgeons in 1914 and continued with the study of his specialty with post graduate work and special courses. Since 1926 he has been a member of the faculty of the college and for the past two years a trustee. Active in all association work he has been president of the American Osteopathic Association and director of the American College of Osteopathic Physicians and Surgeons.

Dr. V. Halladay

Dr. V. Halladay is the dean of osteopathic anatomists. For over 20 years his work in anatomy has kept him constantly before the profession. His original research work on the spine and the text book which followed has given him an international reputation. His more recent activities in connection with the care of athletes have made him a demand speaker at many associations.

Dr. Halladay graduated from the American School of Osteopathy in 1916 and was immediately made a member of the faculty of the college. He also holds an intern certificate, having served two years at the A. S. O. Hospital.

During the past 20 years he has appeared on numerous state and district programs and is a consistent speaker at the national meeting of the association. His work with athletes brings him into contact with nationally known coaches and teams with whom he often meets in conference on the subject of injuries.

Dr. Halladay has for his hobbies music, photography and touring. His favorite recreational spot is Mesa Verde National Park where he is not only interested in scenery but also in archeology and from here he extends his interest throughout the southwest.

At the national convention you will find him helping to keep the osteopathic fraternities and sororities lined up with their several business and social meetings, his office being Executive Chairman.

Osteopathy Without Limitation

Duty

It is the solemn duty, as well as the opportunity of every osteopathic physician to affiliate with the American Osteopathic Association as an active member. This affiliation should be made and maintained for several important reasons.

First, affiliation is only through organized osteopathy that the big things in federal legislation and in national publicity can be accomplished. There are constantly problems arising in the osteopathic profession, as in every other profession. It is necessary to have mass movement, mass influence and mass weight. Again such affiliation is vital, because it keeps the osteopathic physician in intimate touch with problems as presented in the profession and with measures suggested and advised for the solution of such problems. It keeps the osteopathic physician apprised of the latest thought and development with osteopathy both professionally and from the scientific angle through the A. O. A. Journal and other osteopathic publications. It secures listing in the A. O. A. Directory, which listing is becoming increasingly valuable as the years go on. Such affiliation tells the public and your patients, as well as your colleagues, in practice of the fact that you are alert and interested in your unit in the great profession which you have chosen as your life's work. It works out that such affiliation is worth many times its actual cost through the reference of patients. It gives you standing with the insurance companies. It gives you the many detailed personal services through that marvelous organization which we familiarly call Central Office.

Certainly no one can afford for a minute to miss the opportunity of affiliation with the American Osteopathic Association. If you are not now a member, may we take the liberty of urging you to hurry and sign now for the privilege to apply for such membership.

It is equally a duty and a privilege to become affiliated with your state organization. Here again activities of major importance to your profession must be handled through state organizations. The state association is the divisional society unit of the national organization and furnishes the mechanism whereby individual activities become matters of vital interest in state affairs. The state society, when well and completely organized, is the contacting medium for its individual members.

It is a real privilege and an added opportunity to every osteopathic physician to become affiliated with their local group of doctors in your city, in your county and city associations. Publicity may be obtained locally for osteopathy through local associations—their educational programs and other activities.

May I repeat, "Become an active member in your national, state and local osteopathic organizations." Where humanly possible, attend their meetings, take an active part, contribute something of your own ability, put your interest and energy to work for the benefit of your profession. The osteopathic profession is doing things and going places. Certainly no osteopathic physician can afford to stay out of touch with the progress of his profession.

Contribute freely of your time, your effort, your energy, your thinking capacity, as well as your money to the great profession of which each individual is an important unit.

Arthur D. Becker, D. O.

The Corporate Board

The annual meeting of the Corporate Board of the College was held June 15th at 8:00 p.m. at the college building. Those who were familiar with the management of the college knew that this corporate board of over 60 members meets once a year and elects at that time a board of trustees who conduct the affairs of the college throughout the year.

Dr. Becker then took the floor and made an informal report on the activities of the college for the year. This included mention of added equipment, high morale of students and all associated, anticipation of a large fall class, the inauguration of the Building and Equipment Fund, the success of the Review Week, interest in recruiting new students, and the contacts, the Alumni Association and a very flattering outlook for the near future. Dr. Becker's report was received with applause.

The election of officers proved the appreciation of the board for the work of the officers during the past year. The entire list of past officials was elected by unanimous vote, these being as follows:

Dr. Arthur D. Becker, President
Mrs. K. M. Robinson, Secretary
Dr. R. B. Bachman, Treasurer

Dr. Schwartz was again elected Dean of the College at a short meeting of the trustees following the adjournment of the Corporate Board.

Dr. C. I. Gordon of the faculty was re-elected member of the Corporate Board.

Dr. T. B. Larrabee of Webster City, Iowa, made a short speech before the close of the meeting commending highly the officers of the college and making it very evident that he thought that the members of the profession should sit in on these meetings. Dr. Larrabee said he did not realize how important it was to conduct the business of a college throughout a year and in the future he would be more interested in the affairs of the school. We hope to get a short article from him in the near future as he informally told us of something of his own ability, put your interest and energy to work for the benefit of your profession.

Arthur D. Becker, D. O.

"I Think"

(Continued from page 1)

The rules. You found a hotel accommodating every feature of your comfort. It was a great city within itself for you did not have to leave the Stevens for anything. I think that the arrangements for this meeting were near perfect as we have ever experienced.

Some of you spent no time at all on this. You attended and I hope you enjoyed it. Others found some very very long hours getting ready for you. Take your program and sit down for half an hour, look over the array of names in it and try if you can, to figure the hours spent by these women and men for months before in this meeting.

Hours spent bringing the loose ends together and weaving a nearly perfect international meeting of our profession. There is a great deal of satisfaction in looking back over the week that we had. We made it impossible to attend all the going on.

We left the convention program out of the picture, the most interesting things to me, the privilege of meeting and associating with physicians who love osteopathy through local associations. Where humanly possible, attend their meetings, take an active part, contribute something of your own ability, put your interest and energy to work for the benefit of your profession. The osteopathic profession is doing things and going places. Certainly no osteopathic physician can afford to stay out of touch with the progress of his profession.

In leaving the convention program out of the picture, the most interesting things to me, the privilege of meeting and associating with physicians who love osteopathy through local associations. Where humanly possible, attend their meetings, take an active part, contribute something of your own ability, put your interest and energy to work for the benefit of your profession.

I believe, without a doubt, the most practical and successful convention ever held. Much of the credit belongs to the officers of the college in charge and to the chairman of the divisional sections for the splendid programs. A deep satisfaction should be felt by all by having the privilege of meeting and associating with outstanding specialists in the different fields of osteopathic practice.

Dr. Glenn E. Fisher

Dr. Fisher is a more recent graduate of the College, having secured his degree in 1933. His talent as an interpreter of the difficult problems in chemistry assured his position on the faculty of the college after acting as assistant in the chemistry department during his osteopathic training. He is also a member of the board of trustees.

His interest in local osteopathic problems resulted in his election to the position of secretary of the group and he extends his interest into the activities of the association in city meetings.

His frequent appearance at state and district meetings and as a speaker on the program of the national association marks him as a recognized authority in his subject.

Dr. Fisher and family enjoy the outdoors and take motor trips as often as opportunity offers.
President's Letter

This is written near the end of the A. O. A. Convention at Chicago. Many of our Iowa doctors are in attendance, and it has been a pleasure to see them, as well as to meet old and new friends from other places. I feel very proud of our profession as I view the scientific excitement, and help represent our state in the Hours of Delegates. We have come a long way for such a young organization, and are still going strong.

Your state delegates have just finished five days of almost continuous session, and have represented the Iowa Society to the best of their ability. Many problems came up and, while we might not agree with the majority, I feel that the physicians of our state can, with profit, team up with the A. O. A. program for the year. Next year, at Cincinnati drop in on the House of Delegates and listen to the various speakers, and help represent our state in the Hours of Delegates. We have come a long way for such a young organization, and are still going strong.

I wish every osteopath could have attended the Memorial services for Dr. T. Still, which he began. As a multitude of small waves augment the onrushing tide, so may our efforts affect it. I heard a lot of nice things said about Dr. Still's profession. As a profession it was necessary part of the time. With the week of Review Work Vacation Plans

In non-surgical cases of continuous vomiting have you tried giving the patient, especially an infant or small child, water in teaspoon doses every fifteen minutes? This amount usually does not provoke vomiting, is quickly absorbed, and within a few hours breast-feeding can be resumed.

This is especially valuable where a diarrhea prevents the use of food. Vomiting may be absent or lack of hospital facilities make it impossible to give water otherwise.

We are beginning to make plans for the fall district meetings. I plan to write the district presidents near future and exchange ideas with them. Meanwhile, if any of you have suggestions to offer, send

Dr. Halladay will visit Mesa Verde, the Grand Canyon and on south into Arizona, returning via California.

Dr. and Mrs. Marshall will hunt big game late in the fall.

Dr. Owen, being fond of exploring where he can find picturesque localities, Mrs. Robinson expects to drive to Canada and see the quints.

There is one more card playing. Dr. Schwartz will spend some time at his summer home at Lake Okojoji.

Dr. Gordon and family will tour the northwest and visit the Yellowstone region.

If you want to see any of these members, please get in touch with them immediately and maybe they could be stopped for a minute or two, but remember the train will drive fast and are on vacation.

Successful

(Continued from page 1)

The fraternity and sorority registration topped the same list of 378 members of which can be applied to the ordinary usage of the hotel. We have not had any complaint that seems to be general it was about the entertainment plans we have had in some other hotels. In Chicago so near, the majority of the convention and with 378 members of the various frats and sororities to attend their requirements rather than that night off and do something else. Ten fraternity and sorority banquet quets were going in full swing and the last night of the convention. We have had a lot of nice things said about them.

Dr. Golden's recreation consists of exploring the less frequent sightseeing. Her extended practice she finds freedom from our coats to be a thing was convenient so that she could be getting too big to be held in a hotel. There must be a benefit gained through this contact that cannot be obtained any other way. We are glad to see the interest of the public in the work of this convention. We hope this phase of the convention continues to grow also, and not only talk to professional people but to the public. Dr. Clark has been heard to remark that this part of the convention was getting too big to be held in a hotel. There must be a benefit gained through this contact that cannot be obtained any other way. We are glad to see the interest of the public in the work of this convention. We hope this phase of the convention continues to grow also, and many of our friends are in the process of bringing the public into the meeting. Mrs. Robinson reminds us that they were before 1929 he admitted that this was impossible at that time.

The business manager of the A. O. A. Dr. Clark, has been heard to remark that this part of the convention was getting too big to be held in a hotel. There must be a benefit gained through this contact that cannot be obtained any other way. We are glad to see the interest of the public in the work of this convention. We hope this phase of the convention continues to grow also, and not only talk to professional people but to the public. We Wandered

About this time of year we take a walk and look around. We ask
a few questions and then observe things in general. This is the
time of year when all of us seem to be pretty busy. Vacations are
about over and we are counting the days until the gang will
return. We are getting ready for this gang preparation and see
them but we are busy and not parked, waiting for the seventh of
September.

On the first floor of the college building the chemistry lab was
being renovated. Bottles that had been tainted with the summer dust
were being polished and arranged and back in the dissection room
more cleaning was in progress. One body was on the cooling board and the tank was ready
for the fall task in store.

The office on the second floor was too busy. There were 24 patients in the waiting room and numerous student doctors and exam-
ining physicians were putting over to their wants. The new X-A
System installed late in the spring term was in use almost const-
antly.

Charlie was at work on the third floor getting the walls cleaned and the chairs back in place in preparation for their
winter coat of smoke and as for the chairs, they are neatly ar-
ranged for only short periods of time.

On the fourth floor work was being done in the labs. Cleaning and checking to be sure that sup-
plies and slides are ready.

The labs on the fifth floor have been cleaned and everything is in some, desolate place. We took
one glance into the darkened projection room and hurried down.

A short drive and we are at the Des Moines General Hospital.
Dr. J. P. Schwartz, surgeon-in-chief, was at the scrubbing basin getting ready for a cataract opera-
tion. Dr. Graney, his assistant, was looking over the tools that
Dolly had so neatly arranged. Dr. J. L. Schwartz was in another
room getting ready to take out tonsils. Dr. Dennis, his assistant,
was nearby. Dr. H. J. Marshall was sticking a wicked looking hypo in a girl's tonsillar region. Dr. McNerney was holding her head—or was it her hand?

Dr Bos was checking over some kind of a report. Dr. Hammond arrived with a suspicious looking test tube. Dr. Bachman was in
the nursery looking over last week's crop of new American citi-
enz and Dr. Cash was hidden in the developing room, having fin-
ished a series of X-Rays of the chest. We walked down the three

O. W. N. A.

The O. W. N. A. Business Meeting at the National Convention
was very well attended. The Tuesday noon luncheon presided
over by our beloved Fannie Carpenter proved an inspiration to everyone. Dr. and Mrs. Stow Baur presented Amy Cochran for

two hours of fascinating

The O. W. N. A. membership returned home with the deter-
mination that osteopathic womanhood would not be shall be by any
other professional group of women either in devotion to purpose or percent of members with dual affilia-
tions.

The outlook for the new year is bright. Many new members have come into the organization and many auxiliaries have real-
ized the tremendous effect of group effort. The Osteopathic Woman's National Association will accomplish outstanding re-
sults whereas the individual woman or club must be limited in contacts.

Let every professional woman and each osteopathic group of women join in a determined effort to make 1937-38 a great year for
osteopathic influence through united cooperation.

Mary E. Golden, D. O.,
President, O. W. N. A.

“I Think.”

The Chicago Osteopathic pro-

fession and the Chicago Osteo-
pathic Hospital are to be congratu-
lated and glad indeed that the proc-

ed that was held there

recently. The officers and mem-
bers of the International Society

of Ophthalmology and Otology
and the American Society of Ophthalmology and Oto Laryn-
gology were very well pleased

with the general arrangements at
the hotel for examination of pa-
tients, the lecture and conference rooms and for the large num-
ber of clinic patients. The hospital
gave us splendid cadaveric mate-
rial to do our work on, splendid rooms for us to work in and the
hospital was very generous with
their nurses and interns assisting us.

The weather man was kind and gave us cool weather during the
I. S. O. and O. & O. L. con-
ventions.

The new officers of the I. S. O.
and O. & O. L. are making great
plans for the convention in Cin-

cinnati and we hope to make
Eye, Ear, Nose and Throat work
will be greatly compensated by
attending the convention next year.

H. J. Marshall, D. O.,
Vice President I. S. O.

GRAND OFFICERS

Those of you who were unable to attend your fraternity or sorority reunion in Chicago this summer will be glad to know who your Grand Officers are so that you can keep in touch with the affairs of your organization. If you are lost from the fold and not on the roll of your frat or sorority please advise the secretary. One more urge. We want 100% A. O. A. membership among our Council members. Your neglect may place your organization at the bottom of the list.—H. V. H.

LOCAL

The five fraternities and the one sorority active in Des Moines are really alive. We checked these organizations at the close of the college year and found them all to be in good condition financially and all having had a good year. Now these young men and women are preparing to return to school and are also making plans to receive the membership of the new class. Des Moines is proud to list this group, with their officers. They are all in good standing with their respective national chapters. We had the pleasure of working with the grand officers of these fraternities and sororities at the convention this year. Now these young men and women are really alive. We checked all to be in good condition financially.

ΦΣΑ

ΦΩΓ

Dr. L. L. Facto

Dr. L. L. Facto graduated from the Des Moines Still College in 1926 and immediately went to London, England, for a year’s clinical work. Since then he has attended special post graduate courses with Blanchard and others. This wide range of clinical observance has especially fitted him for the position of superintendent of clinics at the college.

He is an able speaker and an authority on nervous disorders, his appearance on many programs being evidence of his popularity along this line.

Being interested in athletics since a small boy, he and his family enjoy the seasonal sports and take advantage of vacation days by making auto trips into various parts of the country.

Dr. Byron L. Cash

Dr. Byron L. Cash graduated from the Des Moines Still College of Osteopathy in 1917. Has served his internship at the Des Moines General Hospital. During the war was assigned to laboratory work with the Army and since has taken post graduate work in Chicago and at the University of Michigan.

As Roentgenologist and chief laboratory technologist at the Des Moines General Hospital, Dr. Cash is thoroughly conversant with the X-Ray and all forms of Physio- and PhysicalTherapy. These subjects are presented by him during the Senior year at the college.

Dr. Cash and his family enjoy touring and an occasional weekend at the lakes.

Dr. John M. Woods

For the past 14 years Dr. Woods has been a popular member of the faculty of the college. He is an able teacher in several subjects, having recently devoted more time to the teaching of the practice of osteopathy. He has always been active in all association work, having recently been reelected to the presidency of the state association. For the past several years he has been associated closely with the Internists Section of the national association.

Dr. Woods graduated from the Des Moines Still College of Osteopathy in 1929 and has since that time been a member of the faculty and also conducted a busy practice of the general type, all of which makes him especially well fitted to lecture on the subject of Osteopathy.

Dr. Rachel Woods, his wife, is also a graduate of the college and has added to the family prestige by her office as secretary of the Osteopathic Women’s National Association.

As a family they enjoy motoring and a trip to the lakes in Minnesota.

Dr. C. I. Gordon

Dr. C. I. Gordon graduated from the Des Moines Still College of Osteopathy in 1931. Dr. Gordon is active in association work, being a member of the local, state and national associations. He has filled all of the offices of the local group, being recently elevated to the presidency. He is also deeply interested in club and young people's work, speaking before them frequently.

Appreciation

We have many reasons to feel that the first great objective in our program of advancement has been accomplished. The work and effort and planning of the past two years have crowned with success. We can now look forward to new effort with the calm assurance that we have an organized and effective alumni group marching with us in our determination to accomplish bigger and still more constructive things for Des Moines Still College of Osteopathy and, through this institution's development, for the great science of osteopathy.

Work loses its concomitant fatigue and exhaustion when the bright rewards of success become clearly evident. Vision is made increasing, and fruition lights the way. We find ourselves definitely around the corner and squared away for new steps in progress and development.

Our many friends and well wishers in the profession and in our own student group have crystallized their good will into tangible assets by referring qualified prospective students and by subscription to our Building, Equipment and Extension Fund. We may, at this time, look forward with confidence with the certainty that the future of Des Moines Still College of Osteopathy as an integral and important factor in the steady and continuous expansion of the march of osteopathy as a science and as a profession.

Are you ambitious to be with us and to take your full fair share in our development? We would be glad to have you as a co-worker in our plans. We are taking new steps, setting new standards, visualizing new opportunities. We will need your enthusiastic backing if we realize our highest objectives. We are on the way to great accomplishment and we want you with us to further guarantee unqualified success.

The American Osteopathic Association at its annual convention in Chicago met the entrance requirements for all osteopathic educational institutions at the same time, exactly one year ago as the platform of our college, viz, one year of college work as a prerequisite for entrance for the September Class of 1938 and two years of college work as entrance requirement for the September Class of 1940. This 1937 September Class is the last fall class to be enrolled previous to the step up in entrance requirements, and the January 1938 Class will be the last class to be so enrolled. Be sure your prospective students understand it. We would be glad to have you refer students.

Alumni !!!

There is one thing that we left out of the report of our wandering around at Chicago. This was touched on when we made mention of the college breakfast and Dr. Becker this month mentions it. This is not enough.

Last year those of you who can be found were made conscious of a definite effort on the part of Drs. Clybourne and Homan to do your responsibilities to your Alma Mater. These same busy doctors have again assumed offices they carefully filled last year. Dr. Clybourne is president of your Alumni Association and Dr. Homan is secretary. You will hear from them occasionally and we hope you will respond when they write you.

The great colleges of our country have been improved and maintained largely by the appreciative cooperation of their graduates, and many of these leaders were all small schools. Their growth and increase in usefulness has been made possible by concentrated efforts through a strong alumni association which had faith in the future of the institution. Money is not everything. Your support can be shown by sending a student each year and that is not asking too much of you. You already know the need for more osteopathic physicians throughout the country. You know several young men and women who are qualified but have not been approached in the right way. If so, they would be enthusiastic supporters of our science and would be glad of a chance to enter a college of osteopathy where osteopathic training is stressed.

You have plenty of raw material within your own territory. We have the plant that will turn that raw material into practiced osteopathic physicians.

We had the pleasure of talking to an alumnus of our college this summer who is more than a thousand miles from Des Moines.

"The more contacts I make the more I realize that Still College gave me more than I thought I was getting. I know how much I know and how much more I know than some others I have heard.

In our line of duty we often have to do things that we would rather not do. This is a duty that certain people like. We know you are proud of D. M. S. C. O. August that pride with the tangible evidence of a new student from your eligible list.

Write to Drs. Clybourne and Homan and tell them you want to help make D. M. S. C. O. bigger and better.

We heard many nice things said about these two leaders of our group when we were in Chicago. We heard many fine compliments on the college. We know you are awake to the opportunities and we are ready for that big class you are helping to send to us this fall. E. H.
Dr. E. F. Leininger

This year sees the addition of another graduate of the college to our regular faculty. Dr. Leininger, having served internship and proved his ability in the management of the Gynecological Clinic and laboratory, now joins the professional staff. This change will concentrate this department under one physician and bring the lectures and laboratory into closer relationship.

Resume

Some of you like to go fishing. I do not. I like to get in the wagon and hit the trail for the S. W., meet old friends and see what is being done with national parks and monuments. I would much rather fish and hunt with a camera and a spade than the usual outfit. Here was my fishing trip.

Mesa Verde National Park—gorgeous. Too bad there is not too much—no thrill to drive the Knife Edge. Glad to see Mr. Nusbaum, the Franks, Ted, Lynn, and the others. Sorry to find Jim out of the horse-rangler game and sedimentary in a delightful camp at Durango. Time changes the old trail too much.

Chaco Canyon—first venture into a territory that is harder to get than the map indicates. Beautiful masonry and some very poor roads. Pueblo Bonita should be protected more.

Painted Desert and Petrified Forest both lovely and beautiful. Too bad that we can't steal all the petrified wood we want. You should be able to fine petroglyphs at the forest.

Sunset Mountain and the Ice Caves as interesting as before.

The Canyon—The Grand Canyon of course. No words are adequate to describe it. Certainly did enjoy seeing Herb and Harry again.

Prescott, Ariz. — One of the most friendly cities you will find. Prescott Peak which is about 8,000 feet high and it is in the north. Fine forest on the south. Drop over to the ice company and meet a fine gentelman who also runs the bottling works. You will be convinced that they make the best ice in the country and you will see how clean the beverage business is there.

The Desert—110 in the car but what a thrill to drive it again. In anticipation of anti-ford Pinkley at the Ruins. (Casa Grande near Coolidge, Ariz.) Our visit was cut short by a strange and we are all happy over the finish last year to be here on the dot, ready for a full year of hard work beginning September seventh.

We met Virg Halladay in the hall. "I hope we get a few good students in the new class." And that's all.

—E. H.

Drive up the Rio Grande from Las Cruces to Albuquerque and you will find a fertile valley all the way. Elephant Butte Dam is not spectacular but is worth a side trip.

Virgil Bostman at Santa Fe had me billed to speak before the 20-30 Club and that was enjoyed. Back to the Springs and Denver and a talk to the group at Dr. C. C. Reid's Poly Clinic. What a fine home he now has for his post course and what a large group were there. It was a pleasure to talk to them for a few minutes. Osteopaths were there from coast to coast.

Home again. What did I bring back? A good coat of tan, five beautiful arrow heads and some odd rocks. There were showers while I was away but the snow and ice covers our streets and when I am doing my deepest wishing that it were vacation time again.

VIRG.
We Wandered Again

Last month we took a walk around the college building and over to the hospital and it proved so interesting to us that we thought we would look the ground over again this week. The stage was then being set for the fall rush of students, new and old. These students are now here at work, and when we say "at work" we mean it, for five minutes after the bell rang Wednesday, September 8th, every teacher was in his place and not a student was seen loafing in the halls. We have never seen the bunch come back ready for work like they did this year, hence the observation trip.

At the last minute, due to the increased registration in the new class, the trustees decided to enlarge several of our labs. The Bacteriology lab on the fifth floor has been doubled in size. A new Pathology lab has been built on the fourth floor occupying the unused large floor space adjacent to the Biology lab. The Biology and Physiology labs on the fourth floor have been enlarged 50 percent. With this new rearrangement and increase in size of the labs, we are using every square inch of the five floors of the college building. New equipment is ready to go into these enlarged laboratories and we are prepared to take care of the anticipated increase in students during the next several years.

Every room on the third floor was occupied by a class. Standing in the hall we could hear the voices of several of the faculty conversing with the students and pet subjects. Some of the doors were open and the seats were filled with the old and the new, and all attentive—glad to be back after three months of vacation. It sounded like the teachers were also glad to be back, and for they had that peppy ring to the voice. Maybe it has been the cool weather. For we have not enjoyed the usual heat of the first two weeks of the fall term.

We visited the office to see how percentages were running in the new classes. Of course we got the usual rebuttal that the registration was not complete but the day we checked it was satisfactory. For there was an increase over last year at the same time. We did sneak a few figures that might interest you. Michigan leads, Ohio is running a close second, Iowa is third (note that, you fellows in Iowa), Minnesota, Wisconsin, Illinois, Maine, Nebraska, Wyoming, North and South Dakota were all taking, and last, and a large number of that class is not completed. Next month we will give you some (Continued on page 4)

State Fair Clinic

The sixth annual Osteopathic Health Clinic, held at the State Fair, showed a very significant trend, a trend that should make every doctor take notice.

Persons who took the examination during the first two or three years, through curiosity or to kill time, have "Gone with the Wind." The clientele now is seriously seeking knowledge and help in the treatment of their physical ailments. Many times they tell of seeking help with osteopathic and medical problems for any satisfaction. Some friends told them about how thorough our examinations are and they came to find out what we could do for them. I talked with practically everyone as they left, and everyone was well pleased with the examination, because they had gotten some facts about their condition and advice that appealed to their reason and common sense.

This clinic is being recognized by Iowa people as a fact finding body. It is bringing to the light the fact that osteopathy searches for the cause of their physical ills, as no other system does. They are learning that osteopathy is not just rubbing or a series of motions without any definite thought in the operator's mind. They are learning that osteopathy is not only reasonable, but that it has a real scientific foundation, and that it understands and is applicable to all physical conditions or types of cases.

As I have said before, this is a fact finding clinic. We have held it straight to the course of the beginning and shall continue to do so, so the wisdom of this is demonstrated by this trend of the serious minded, truth seeking, sick individuals coming to the clinic in greater numbers each year. This trend is of much more importance to the future standing of osteopathy in Iowa than the number examined would be.

A few days spent at this clinic observing taking patients through their entire examination, or conversing with those previously examined, will be an education well worth while, and will convince any unprejudiced man that constructive work, worthy of the staunchest support, is being done.

-Della B. Caldwell.

Nota Bene

All secretaries or other official representatives of all qualified organizations of the A. O. A. are hereby requested to send their reports for the requirements for facilities at the 1938 A. O. A. Convention to the Chairman of Facilities, Dr. Walter H. Siehl, 602 Traction Bldg., Cincinnati, Ohio.

OUR DEPARTMENT OF OSTEOPATHY

It will be impossible in the small space we have for this article, to adequately cover this department of our college. We feel that we want you to think with us in the problems that arise in the management of our college and with this in mind we are going to review a department each month and ask you for comment. We want constructive criticism that will enable us to graduate better representatives of your profession.

In our college the man largely responsible for the osteopathic technic and clinical training of the student is Dr. L. L. Facto. He does not assume full responsibility for the complete osteopathic training of the student but he is the major contacting physician between the student and the patient. Each member of the faculty takes part in the training of the completed physician and each department stresses the osteopathic concept above every other therapeutic measure. Dr. Facto teaches Nervous Physiology, Communicable Diseases, Physical Diagnosis and Technic and is in charge of the Clinic. This is a full-time job and an important one in the development of our future osteopaths.

Dr. A. D. Becker is the able leader in training the students in the Principles of Osteopathy. The entire profession knows that with this subject in the hands of Dr. Becker students at D. M. S. C. O. will have a true osteopathic foundation and appreciation of the basic facts of our science. Dr. Becker also brings into the subjects of Nervous Diseases and Differential Diagnosis the many osteopathic truths that he knows from years of contacts.

Dr. H. V. Halladay pounds osteopathic Anatomy into his students as you well know. His work with the spine and along other practical therapeutic lines is well known. His course in Mechanics which precedes the lectures and demonstrations of Technic is purely (Continued on page 3)

The LOG BOOK

PUBLISHED MONTHLY BY THE DES MOINES STILL COLLEGE OF OSTEOPATHY

Volume 14

September 15, 1937

Number 8

Accepted for mailing at special rates of postage provided for in Act of Oct. 3rd, 1917, authorized Feb. 3rd, 1923.

Entered as second class matter, February 3rd, 1923 at the post office at Des Moines, Iowa, under the act of August 24th, 1912
Vacation time being over, the members of Phi Sigma Gamma take this opportunity to greet the faculty and new students, and wish to all a successful year.

The fraternity house has been undergoing repair inside and out; new furniture and rugs have been added.

We are sure that everyone studied and really got the fundamental stuff. Sun-burned toasts may speak of many hours under Old Sol, but soft hands show it was not at labor. Thus time was spent.

When questioned as to their summer's accomplishments, silly winks and sheepish grins spoke louder than words.

How were the Indians Arley? Cliff might tell us all about the Black Hills, but it must have been less exciting living around alone—or were you?

We wish to congratulate two of our members who have been accepted by the State Board to undergo repair inside and out; one of whom is an intern at the City Hospital in Lawrence, Massachusetts.

The members of the Sigma Sigma Phi wish to extend their greetings to the new and returning students and wish to extend congratulations on their choice of osteopathy as their life's work.

We are looking forward to an enjoyable and active semester in this new sponsoring school activity, and feel with the cooperation of the student body our goal will be attained.

We take great pleasure in welcoming to our house at the home of Dr. Halladay and voted in coming all the new freshmen into our fraternity, which will enable the new and old students and faculty to become more closely acquainted.

Des Moines Interfraternity Council

Last year the several organizations of the college took a decided forward step in the formation of a local group affiliated with the National Osteopathic Interfraternity Council. This council consists of a representative from each of the recognized fraternities and sororities united for the major purpose of bettering the status of each of the organizations, this group met Thursday evening, September 6th, at the home of Dr. Halladay and voted unanimously on several issues that will be carried out for the good of all of our social and honorary organizations. The membership this term, with officers, will be as follows:

Spork President Iota Tau Sigma
Freeman, Secretary - Treasurer, Delta Omega
Munroe, Atlas Club
Obertski, Psi Sigma Alpha
Miller, Sigma Sigma Phi
Zyzelewski, Phi Sigma Gamma

N. O. I. C.

(National Osteopathic Interfraternity Council)

Early this month letters were sent to the new selected presiding officers of our group. Plans will start in the immediate future for the reunion and banquet that each of these organizations sponsors at the annual convention of the profession. Other measures that will tend to increase the standing and usefulness of our fraternities and sororities have been adopted and will be presented for their ratification.

Due to delays in the mail we were unable to complete the list of grand officers for the entire group, but below is the list given.

Iota Tau Sigma—
President, W. V. Goodfellow, Los Angeles.
Secretary, J. C. Treony, Los Angeles.
Axis Club—
President, Georgiana B. Smith, Los Angeles.
Vice-President, Julia Kline, Jacksonville, Florida.
Treasurer, Elizabeth Mochrie, Sioux City, Iowa.

Assembly September 10th

A precedent established years ago rules the first assembly of the year. It is put on display on the platform and each made to speak for a few minutes. Little do you realize how difficult it is to get a member of the faculty up there on the stage but this effort is not half the power needed to get him up once he is started on his oratorical marathon. Ordinarily any member of the faculty can hear the bell ring five minutes before the putton is punched in the office, but on an occasion like this try to stop him and then see how far he gets.

We wish to remind the freshmen that their first thoughts this year should be of study — Study and make this a successful year for all. Remember: "one's brain is his only friend."—A. T. Still.

ITs

Iota Tau Sigma extends its greetings to the faculty and the new freshman class. We are happy to have the progress and attainments of Des Moines Still College for the coming year.

Dr. Vic Pohl has finished his internship at Des Moines General Hospital and plans to open an office in Ohio. Dr. Bob Gerow is starting his second year of internship in the Detroit Osteopathic Hospital as senior interne. Harold Dresser is opening a practice in Belle Plaine, Iowa. Gono Bechtel is in DeKalb, Illinois, but expects to practice in eastern Iowa soon. Francis Yuley is in Boston, Massachusetts. Tony Sison has returned to school after several years' absence. Howard Sprank spent a profitable summer as an insurance executive in Pittsburgh, Pennsylvania.

Ed Jeronson spent most of the summer fishing in and near Evelyn, Minnesota, and the members of our eminent heart specialist, helped in the Clinic and visited the home folks way down south in Elizabeth City, N. C. George Boston made the Chicago Convention, Des Moines Clinic and Daventry.

Osteopathy Without Limitation

Pioneer Spirit

To many thousands of intelligent people, osteopathy as a science and as a system of practical procedure is still frontier ground. In fact, I think the great mass of people could be divided in the following groups: Those who know nothing about it (far too many), those who are more or less interested but are uninformed (a large group confusing osteopathy with other systems which to them appear similar), those who know a little about it and use it but have limited knowledge of the broad scope of its possible applications (many of your patients in this group), those that are out and out antagonistic (usually consisting of persons who are in other collateral fields of practice), those who know about it, use it and keep informed respecting its development, its success and its possibilities (a large and growing group but still too limited).

Most of my readers could add to these five groups but they are sufficient for our present purpose. The fact remains that osteopathy is still new ground in the therapeutic world. It is a little over 63 years since Dr. Still enunciated the basic truths upon which all osteopathic procedure is founded. Drs. Facto and Fisher and Mrs. Robinson. They took time off and came back from the trip with a line when easier methods are at hand. Do we as individuals know enough about fundamental osteopathic principles to secure our place in the great march of osteopathic progress? Can the osteopathic colleges sift the wheat from the chaff to the end that students will be able to properly evaluate osteopathic reasoning and osteopathic thinking?

We still need pioneer spirit in osteopathic education, in our osteopathic literature, in our osteopathic publicty.

—Arthur D. Becker, D. O.

Cheerio

The one member of the faculty that claims that the Southwest is the land of some new unproved theories. Can we meet straight in the face of determined opponents? Can we think straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents?

We do claim that with the osteopathic concept Pathology is something new and that claims that the Southwest is the land of some new unproved theories. Can we meet straight in the face of determined opponents? Can we think straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents?

Osteopathic. Dr. Halladay also teaches Orthopedics, a specialty practice that could not exist without the basic principles of Osteopathy. Orthopedic patients in medical institutions are given more osteopathy than any other type of therapy.

Dr. J. M. Woods teaches Osteopathic Therapeutics. His contribution to the osteopathic training of the student is extremely important, for here is where Diagnosis, Prognosis and Treatment must meet. We feel that we have an obligation to discharge in the training of a student. We must provide in Osteopathic Therapeutics an improvement on other methods of therapy. Dr. Woods is capable of carrying out this duty and also that of putting the finishing touches to the line when easier methods are at hand.

We do claim that with the osteopathic concept Pathology is something new and that claims that the Southwest is the land of some new unproved theories. Can we meet straight in the face of determined opponents? Can we think straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents?

The matter of making an accurate diagnosis and checking on it to determine the results of Osteopathic treatment by laboratory methods is in the hands of our Chemist and Laboratory Diagnostics, Dr. G. E. Fisher. Laboratory methods of diagnosis rapidly change but the old is not discarded until the new has been proven by satisfactory results.

We still need pioneer spirit in osteopathic education, in our osteopathic literature, in our osteopathic publicty. The one member of the faculty that claims that the Southwest is the land of some new unproved theories. Can we meet straight in the face of determined opponents? Can we think straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents?

Osteopathy is an integral part of the teaching of every member of the faculty. Surgery, Obstetrics, Gynecology, Pediatrics, Eye, Ear, Nose and Throat and other practical subjects are taught with the stressing of osteopathic principles that are necessary for a successful practice.

THE OSTEOPATHIC COLLEGE OF CLINICAL OPPORTUNITIES

Conventional Dates

Dr. Arthur D. Becker will meet with the Montana State Association, Missoula 20-22, and with the Pennsylvania Association at Erie, October 8-9.

Dr. L. L. Facto is booked to give a course in the teaching of Surgery at Lincoln, September 21, and with the state group at Fond du Lac, Wisconsin, October 9.

Dr. Mary Golden addresses the Missouri State Osteopathic Association at Joplin, October 6-8.

Miss Ava Johnson traveled to New York City to meet with the New York State Association October 2-3.

Osteopathic. Dr. Halladay also teaches Orthopedics, a specialty practice that could not exist without the basic principles of Osteopathy. Orthopedic patients in medical institutions are given more osteopathy than any other type of therapy.

Dr. J. M. Woods teaches Osteopathic Therapeutics. His contribution to the osteopathic training of the student is extremely important, for here is where Diagnosis, Prognosis and Treatment must meet. We feel that we have an obligation to discharge in the training of a student. We must provide in Osteopathic Therapeutics an improvement on other methods of therapy. Dr. Woods is capable of carrying out this duty and also that of putting the finishing touches to the line when easier methods are at hand.

We do claim that with the osteopathic concept Pathology is something new and that claims that the Southwest is the land of some new unproved theories. Can we meet straight in the face of determined opponents? Can we think straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents? Can we meet straight in the face of determined opponents?

Osteopathy is an integral part of the teaching of every member of the faculty. Surgery, Obstetrics, Gynecology, Pediatrics, Eye, Ear, Nose and Throat and other practical subjects are taught with the stressing of osteopathic principles that are necessary for a successful practice.

THE W. VA. BULLETIN—arrived not long ago and we were glad to see so many of our old graduates mentioned. Dr. Harry E. McNeil is president of the society. Remember Newton, Graham, Smith, Jones, Sparks, Cudden and King? Certainly.

Dr. C. C. Teall—died on October 22, and we heard of it only after it was done and he knew of it before he died. His occasional letter was always constructive. We will miss "C. C."

MISS AVA JOHNSON—a former member of the faculty, left the last of August for an extended trip to Europe to complete some work she initiated last year for the Bulgarian government. Dr. Zoe Mungell of Cedar Rapids, Iowa, accompanied Miss Johnson but expected to return to her practice about the first of November.
August 31, 1937.

Dr. John M. Woods, President,
Iowa Society Osteopathic Physicians and Surgeons,
Des Moines, Iowa.

My Dear Dr. Woods:

Your request of August 30th for an article dealing with the legal status of osteopathy in Iowa has been received. This important subject is of primary interest to us and we appreciate your request for an article dealing with the status of osteopathy in Iowa.

Your correspondent feels that the membership of the Iowa Society Osteopathic Physicians and Surgeons have been well advised from time to time as to their rights and privileges while such information was pertinent and not after it became history. The non-members however are pretty much in the dark with reference to the wholesale changes which have taken place as to privileges during the past few years. Numerous letters are received daily from this latter group requesting information relative to the legal status of osteopathy in Iowa and for interpretations of the law as it pertains to the problems in their respective communities.

Agreement by all committees of the State it is necessary that such requests from non-members be confined to the waste basket, because I think rightly so, that it would be eminently unfair to the membership who underwrite the expenses of their legal status of osteopathy in Iowa and for interpretations of the law as it pertains to the problems in their respective communities.

One of the letters received recently advises that such requests be confined to the waste basket, because I think rightly so, that it would be eminently unfair to the membership who underwrite the expenses of their legal status of osteopathy in Iowa and for interpretations of the law as it pertains to the problems in their respective communities.

A movement now in process of fulfillment promises to be the greatest achievement ever attempted for the members of our Society in the state of Iowa. Only paid-up members will be in a position to reap the benefit of this program. It is therefore up to each and every member of the Society to do all in his power to encourage such membership and to join the various osteopathic associations, county, district, and national.

The thousands of scientific facts that are poured into the heads of the students are not looked real after all. We felt repaid for the time we, another body was in the process of being prepared for that work. The thousands of scientific facts that are poured into the heads of the students are not looked real after all.

The Polk County Osteopathic Association held its first meeting Friday, September 10th, at Hotel Chamberlin, at 6:30 p.m. The meeting being in the form of a banquet.

Progressive plans for the year were presented and discussed. The local associations of all districts will attempt to do their share in keeping osteopathy before the public eye. The local and professional liaison committee will cooperate with the national organization.

Interesting programs are planned for the monthly meetings. We are going to try to do things in such a way that every osteopathic physician to the benefit of this community.

The Polk County Osteopathic Association has been appointed by the president, Dr. Harry Barquist:

Program: Bruce Farmer, Chairman.

Entertainment: James Humphrey, Chairman.

Publicity: Benjamin Devine, Chairman.

Membership: Benjamin Devine and James F. McCallister, Ethics: John Woods, Chairman.

Public Relations: Arthur D. Brunger, Chairman.

Chaplain: Lester P. Fagan.

Legislative: Saul Klein, Chairman.

Student Recruiting: Harry Marshall, Chairman.

The present officers of the group are as follows: Dr. Bruce Farmer; vice president, Bruce Farmer; treasurer, Carl Seabrand; secretary, Jack Berek.

Dr. H. V. Halladay—judged an amateur contest at the recent meeting in Des Moines.

In the iudres’ stand.

We wonder if osteopathy—the study of the body—is not demanding closer attention and more concentration than ever before. It seems to us that we have been a little more of a state of things in the past and we are a little more of a state of things in the past. We are looking ahead and we are looking ahead. We are looking ahead and we are looking ahead. The thousands of scientific facts that are poured into the heads of the students are not looked real after all.

The Outlook
We are all quite happy over the outlook at the beginning of the school year. We are not satisfied. We do feel that we can handle more students to advantage. We have the equipment, the faculty and a clinic that taxes our time constantly, but we are adding each semester to our total enrollment and we know that Osteopathy is not slipping in the matter of new recruits.

Our new class exceeds in size the one entering at the same time last year! Fifty-five students entered the graduating group and consists of as fine a group of young men as you will ever find. We regret that there is not one member of the fair sex enrolled in this new class. We need in Osteopathy and here in Des Moines more young women to meet the growing demand for women osteopaths.

We are delighted that we have a number of our old students return after an absence of one or more semesters. We know that they are still interested in finishing in the course in Osteopathy and some of them are making great sacrifices to continue.

We are proud to have with us several transfers from other colleges of Osteopathy. These students are already fitting into the theme of our college and have expressed their delight at having made the change.

This is a good place to add this item: Next January we matriculate.

(Continued on page 4)

Dr. P. T. Wilson

The college enjoyed a visit the 15th of September from Dr. Perley T. Wilson of Cambridge, Mass. Dr. Wilson appeared before the student body and gave them a talk that can be classified only as "highly inspirational." His main topic was, "Pneumonia," which he illustrated with a series of slides bringing out the benefits derived from our methods of treatment. He also took time to bring into his address many of the major principles of Osteopathy as applied to the care of the general type of patient.

A luncheon given in his honor by the local osteopathic group was attended by the majority of the profession in the district. Dr. Wilson at this time briefly reviewed some of the difficulties we meet with in practice.

During the afternoon he made a trip to the hospital and visited the clinic at the college, examining several of the patients. We all will consider it a great privilege to entertain a physician of this type. Dr. Wilson and we hope he will find the time to again stop and spend a day with us.

Our Department of Anatomy

In 1892 Dr. A. T. Still opened the first college of Osteopathy. Anatomy was the first subject to be taught. Dr. Still had been for many years a deep student of this subject and knew from his own experience that the greater the appreciation of Anatomy, the better the physician would be in diagnosis, prognosis and treatment. Combining all of this, the trustees of this college have made every effort to not only keep up with, but ahead of the legal demands in this department. We feel that Anatomy is still the major basis for a complete understanding of our science and every effort is made to teach the subject in conformity with the principles of Osteopathy.

Dr. H. V. Halladay, the department head, is well known throughout the profession to need an introduction. He has been teaching this subject for twenty-two years. His reorganization of laboratory methods increased the interest in and enabled the student to gain more knowledge from the laboratory work. His research on the spine stands out as a unique piece of work and his interpretations are constantly in demand. Dr. Halladay is a consistent speaker and labored the year usually being one intimately connected with the subject of Anatomy.

Dr. John M. Woods assumes part of the responsibility in the department also. Since his graduation in 1923, Dr. Woods has been a member of the faculty of the college and has taught at least one division of the Anatomy each semester. The presentation of the subject of Applied Anatomy is a difficult one in that the teacher must draw largely on his own personal experience as well as a detailed anatomical knowledge. Dr. Woods is also active in general practice and this fits him especially well for the teaching of Osteopathic Applied Anatomy.

The general subject of Anatomy includes two other named subjects that are a necessary part of the anatomical training of every student. These are Embryology and Histology.

Dr. O. E. Owen very capably takes the classes through these two subjects and adds to the regulation text the explanations necessary for application to the science of Osteopathy. Embryology deals with the structure of the body from a developmental standpoint and many of the diseases and pathological facts called upon to treat must be traced back to development before we can have a proper understanding of the methods of treatment and the response. Histology takes each tissue of the body and places it under the microscope so we can have a clear understanding of the physiological processes and by comparison understand the pathological changes.

Histology and Embryology are taught in the Freshman year. Anatomy beginning in the Freshman year extends through the Sophomore year and is again taught during the Senior year at which time the more practical osteopathic facts are intergraded. This didactic part of the course extends through seven semesters or for a total of six hundred and thirty hours.

Each of these subjects is more clearly demonstrated to the student through laboratory methods. A total of three hundred and ninety hours is spent by each student in this department, covering the examination of slides and specimen and the dissection of the entire human body. Dry bone and specially prepared anatomical specimens are frequently used by the professors for demonstration and each laboratory requires the careful preparation of a manual from each student.

An exhibit of anatomical alterations has recently been added to the museum. These specimens were a part of the offering of the college at the recent convention in Chicago and depicted clearly the effect of osteopathic lesions.

Football

With the World Series out of the way and football about to cross the half-way mark, we can look back and see just what is going on in our own locality. Still College is playing its usual role in the care of approximately 500 boys playing this game. North, East, Roosevelt and Lincoln High schools with Dowing High (Catholic), the Drake freshman team and the Comets, a commercial team in the city—all are being cared for by seniors of Still College.

This means that last semester these students were given a special course in the training and care of athletes. They were ready at the call this fall to go out and take their places in the gym and on the bench with osteopathic prophylactic and therapeutic plans anticipating the traumatic injuries these boys meet in football. With this sport put away at Thanksgiving the seniors will be called to care for basketball, baseball, swimming and wrestling and in the spring the track teams and baseball to finish the year.

At the present writing the following seniors are hard at work every afternoon—Miller, Zywekiewski, Hume, Fagen, Johnson, Houghan, Irvin, Hull, Leubers, Sargent, Wicke, Leslie, Haight, Harwell, Hoffman, Oberski and Griffith. This is only a part of their clinical training at the college this group will be called in shortly to receive the list sent out so that before the end of the season every member of the class will have had the opportunity to learn by direct contact what must be done in the prevention and care of athletic injuries.

I.O.W.A.

Mrs. Burl Elliott, President of the Iowa Osteopathic Women’s Auxiliary announces the list of committees of the current year as follows: Ways and Means—Mrs. Paul Park, Des Moines; Public Health—Mrs. Charles Potter, Forest City; Social—Mrs. J. P. Schwartz, Des Moines; Program—Mrs. J. F. Shaffer, Des Moines; Publicity—Mrs. Foree A. Gordon, Marshalltown.

Membership Chairmen—1st District, Mrs. Paul French, Cedar Rapids; 2nd District, Mrs. Rolla Hook, Logan; 3rd District, Mrs. C. C. Jackson, Keokuk; 4th District, Mrs. W. W. Widen, Forest City; Social—Mrs. J. P. Schwartz, Des Moines; Program—Mrs. J. F. Shaffer, Des Moines; Publicity—Mrs. Foree A. Gordon, Marshalltown.

Accepted for mailing at special rates of postage provided for in Section 1103, Act of Oct. 3rd, 1917, authorized Feb. 3rd, 1923.
THE LOG BOOK

ATLASS CLUB
H. A. J.

With one month behind us the students are already impressed with the higher scholastic stand- 
dards as set up by the Des Moines Still College of Osteopathy.

We are pleased to have as additional house guests the following new students: Al- 
dard McGill, Shenandoah, Iowa; Chase Matthews, Cincinnati, Ohio; Herbert Ridings, Cincin- 
нати, Ohio.

During the past month there has been activity to the highest degree, the high spot being the 
smoker in honor of the new pres- 
ts at school. The surgical 
film appealed to all, especially, "O. B." Ridings, who was decided to specialize in obstetrics "with- 
out" surgery.

The house is the proud posses- 
or of a new picture which was 
unveiled the evening of the 
smoker and which displays the 
faculty members who are life time members of the Atlas Club.

Our house guest for this month was Dr. Fedson of Ames, Iowa.

Our deepest sympathy is with 
brother Henry Leslie, whose 
party.

Vacation memories are a thing 
four times a year.

Supplement to the A. O. A. Journal 
will get a personal letter that you 
will not like so well.

The Sigma Sigma Phi had a 
bouquet at the Davis Grill on the 
ord and introduced, shot for 
the active and pledges, with Dr. H. 
Halladay as the guest and 
speakers, speaking on the origin of the Sigma Sigma Phi and the 
reasons for its being originated.

On September 25th the Sigma Sigma Phi held its initiation, and the following 
active members: W. F. Costello, 
L. B. Sanchez, H. A. Spork, H. I. 
Smith, C. S. Lemon, C. N. 
Mays, and A. B. Schiffer. We were 
honored by having Dr. Binnie 
Dowden as reporter.

The Sigma Sigma Phi held its 
ball at the Rose Lorenz Studio, located in the Roosevelt 
Center at 21st, for the 
active and pledges, with Dr. H. 
R. Lamb as the guest and 
speaker, and George Boston as the 
active members.

The sorority had a picnic at 
Greenwood Park September 16th. 

(Continued on page 4)
Fortieth Anniversary

The class of January, 1938, will be the last class to be enrolled in which graduation from high school is a requisite for entrance to the School. This entrance requirement is adequate in 36 states as a preliminary for preparation for the boards for practice. All members of the recognized osteopathic colleges are prepared under the rules and regulations of the American Osteopathic Association. In the past, the requirements for entrance have been adequate for those states where the A. O. A. has a minimum requirement for entrance. It is hoped that the course of study, as presented by the School of Osteopathy and Osteopathic Education, is inadequate in 36 states as a preliminary for preparation for the boards for practice. All members of the recognized osteopathic colleges are prepared under the rules and regulations of the American Osteopathic Association. In the past, the requirements for entrance have been adequate for those states where the A. O. A. has a minimum requirement for entrance.

We want the class of January, 1938, to be the last class to be enrolled in which graduation from high school is a requisite for entrance to the School. This entrance requirement is adequate in 36 states as a preliminary for preparation for the boards for practice. All members of the recognized osteopathic colleges are prepared under the rules and regulations of the American Osteopathic Association. In the past, the requirements for entrance have been adequate for those states where the A. O. A. has a minimum requirement for entrance. It is hoped that the course of study, as presented by the School of Osteopathy and Osteopathic Education, is adequate in 36 states as a preliminary for preparation for the boards for practice. All members of the recognized osteopathic colleges are prepared under the rules and regulations of the American Osteopathic Association. In the past, the requirements for entrance have been adequate for those states where the A. O. A. has a minimum requirement for entrance.
The Executive Committee of the Iowa Society is indeed to be congratulated for the finding of the Iowa Legislature definitely stating the position of osteopathy as a career. This is a fine piece of educational effort on these programs. We appreciate their having this one opportunity only to visit this college without the one-time entrance fee to become a part of the college. We have one year, college work before he or she can enter our college.

The educational dinner meeting was attended by about sixty nurses and doctors from Polk County.

Beginning next September every student will have one year of college work before he or she can enter our college.

The gate closes on High School graduates only, after January, 1938.

Sounds like the New Deal or the initials of a railroad but to you it should have every usual title on Public and Professional Welfare.

We do not want to be one who will bore you with frequent appeals. We do want to be one of the means of bringing to you the important information that this committee of yours is doing everything that we thought it would do and more. We want you to feel a proud share in this great triumph that has not contributed and quite proud if you have. This is your committee that questions come to our mind when we have the opportunity to sit and review the outstanding results. We have had the privilege of being one of the problems that this committee is working on. You have the answer to this question if you do a little figuring. We think the answer is in the past years the concerted effort of the opposition has been to bring a forceful medical message to the people. They have used every means available to keep the dying spark of allopathic medicine alive. They have filled the air, our newspapers and our magazines with little stories of the greatness of the medical profession, using every care to leave out any reference to any practice other than their own. We have been snowed under by this shower of spoken and printed words.

Our committee is not aping this propaganda but it is effectively educating the public about osteopathy. The public is willing to listen. They listen and they read. We want you to know that your Committee on Public and Professional Welfare is offering to the eyes and ears of the public, information about our profession. Their work in connection with the recent national meeting and since, prove that we need this service now.

In the same breath we may add that they need your support now.

E. H.

THE OUTLOOK

(Continued from page 1)

late our last class under the preliminary High School requirement. This means that your students have this one opportunity only to enter this college without the one-year college requirement. Think this over. We know that you or some boys or girls in mind that should become a part of our profession. You must get in touch with them immediately and see that they have a complete understanding of this ruling passed this year by the A. O. A.
Activity Committee

Last year near the close of school the physical therapy department had a small activity fee to be paid each semester. This money, collected by the office, has been turned over to the Student Committee, and we have here their report to date. Each class is represented on this committee, the membership being as follows: William Costello, Erwin Emory, Glantz, Johnson, Ketman, LaLagque, McKay and Simpson. At a recent meeting of the group, money was voted to provide the college orchestra with music and necessary equipment, the remainder of the sum to be expended to provide instruction and amusement on what is to students.

"Before the close of school last semester, the students voted in favor of an all-night fee to be used for school activities. A member of each class has been appointed as a member of the committee to decide upon the expenditure of this money for the present semester.

"We, the Student committee, in conjunction with the faculty of the college, after considerable discussion have decided to set aside one day and one evening of this semester, to be known as Osteopathic Activity Day. The following report is from the committee:

"We are inviting all osteopathic physicians to attend our annual meeting of the osteopathic physicians of the State of Iowa. The meeting will be held at the Hotel Adolphus, Dallas, Texas, on October 14 and 15, with 75 or 80 in attendance.

Dr. Sam Sparks, program chairman, had obtained as speakers for the convention, Dr. Sterrett, of Philadelphia, Penn., Dr. Bashline, of Grove City, Penn., and Dr. Factor, of Des Moines, Iowa.

Dr. Sterrett, lectured on the various phases of urology and some of his clinical work was supplemented with moving pictures. Dr. Bashline, Case History Taking and Abdominal Surgery, stressing the acute abdomen. Dr. Factor discussed backache, showed a film on the irregularities of the heart and gave a lecture on the endocrine glands.

Another fine out-of-town trip to a convention was started after lunch Wednesday, October 27. The traffic problem between the hotels and for several miles east of Gary held up the parade but finally arrived in Grand Rapids early in the morning of Thursday. Billed for some interesting talks to coaches and with Howard Messmore in charge it went over with encore repeatedly. A talk on the program was finished and then a chance to wash some. Chicago next day visiting the A.O.A. offices and then out to the botanical gardens in Garfield Park and on to Ray Hulbert's dinner. Arrived very much. Home Saturday afternoon late and back to Michigan.

Michigan
Phi Sigma Gamma’s house warming Sunday, October thirty-first which took part on the roof, damaged bed clothing and greatly overshadowed other events of the month. The house is under repair and temporary sleeping quarters have been set up in the recreation room. Phi Sigma Gamma wishes to thank its many friends for their kind offers of assistance. It is a pleasure to know we have so many friends on the campus in a time of need.

Dr. and Mrs. Gordon were guests at Sunday dinner, October seventeenth. Dr. Gordon’s conversation on secondary education was very interesting as well as enlightening.

Jack Miller, of Dayton, Ohio, and John Hardy, of Seattle, Washington, were informally initiated into the fraternity on the night of Saturday, October twenty-third—it is rumored that they violated the chapter’s visitor’s hours and brought in a non-member. They were formally initiated Sunday, October twenty-fourth. Dr. Shafer and Dr. E. O. Owens were present for the initiation and stayed for the banquet given at the fraternity house. Dr. Shafer and Dr. Owens both gave short speeches. Dr. Shafer talked on the obstacles to be passed to overcome them, Dr. E. O. Owens discussed the opportunities of the new members to the organization.

It is a pleasure for Phi Sigma Gamma to announce the following: Harold Seals, of Milwaukee, Wisconsin; Jack Boucher of Kirkville, Mo., John Edgerton of Boone, Iowa; Harry Kreuger of Highland Park, Mich., and Tom Kaebling of Milwaukee, Wisconsin. The Detroit members are a bit non-plussed at the percentage of Milwaukee pledges. It might be added that Jack Yagoobian is also a bit non-plussed at the various ways his name is pronounced.

Members, pledges, of Phi Sigma Gamma and their guests had an exceptionally good time at the Halloween party held at the chapter house, Saturday, October thirtieth. Dr. Burgau and Dr. Owens were on the guest list.

In closing Phi Sigma Gamma wishes to impart a bit of useful information to its members regardless of their affiliations. In the words of Dr. Owens, who remarked at the recent initiation banquet, “In dealing with the fraternity, it is well for the pledge to remember that the fraternity is always right, and the pledge is always wrong.”

We're Thankful

Next week we are happy to pause for a day and look back over the past year. What a wonderful year it has been and how much to be thankful for and we have little to complain about. We are not going down—on the contrary, we are slowly going up.

To You

We are thankful that we have merited your support and that you have so many fine young men to choose from for the recent class. We assure you that every member of the faculty and board of trustees appreciates the responsibility of educating this group.

We are thankful for the many cards and letters expressing the pleasure of receiving the Log Book. We know that more of you feel the same way but do not take the time to write and say so.

We are thankful for your many requests for our faculty to visit the new location and how every member of the force at the Central Office. It is an inspiration to visit the new location and to see what is being done and what is planned and will be done in the future.

To Our Students

We are thankful for the wonderful morale that permeates the entire student body. As we look over the classes and as we see you in the halls and as we meet you at the frat or on the street we see a radiance that is enjoying life and work that we have not seen in years past. A short while ago something happened that seems to be making us all happier. It must be that inner feeling that tells us that we are really doing things and going places.

To Our Faculty

We are thankful for the fine work you are doing. It is our pleasure occasionally to loaf down the halls and listen in on a lecture for a short while. We have not found slow, dragging periods with sleepy, nodding students. We have seen and heard the enthusiasm of the awake class being kept that way by the practical, sure-fire lecture work of our faculty.

To Our Board

We are thankful for the improvements you have made in the college this past year. We have expanded, and you are meeting this by keeping ahead of the student body. We appreciate everything that everything that has been done at once and we are confident that those things yet to be done will be done.

A CORNER OF THE NURSERY

(Continued from Page 1)

as well as the obstetrical laboratory, train the graduate completely to fulfill his duties as a family physician when obstetrical cases present themselves.

There is only one idea we would like to add: this efficient department of the college is one of the several in which your student body. As we look over the classes and as we see a radiance of living and alertness of a wide-awake period with sleepy, nodding students. We have not seen in years past. A short while ago something happened that seems to be making us all happier. It must be that inner feeling that tells us that we are really doing things and going places.

We are thankful for the fine work you are doing. It is our pleasure occasionally to loaf down the halls and listen in on a lecture for a short while. YOU HAD BETTER—

take a few minutes and read some good osteopathic articles in the following medical journals. We just had time to catch up on these references that the state librarian is so kind as to lay aside for us.

Southern Medical Journal, August, 1937.
Journal of Bone and Joint Surgery, April, 1937.

'CHOCOLATE' AGAIN—

is quoted in the Toronto Daily Star and Evening Telegram. These are both good articles but it is up to us to see Hubert titled "CM."

SEND US—

Items of interest that happen in your community that reflect the progress of Osteopathy. Others like to know what you are doing.

DO YOU HEAR—

Dr. Harry Hagen's remarks about Osteopathy during his spelling bee Sunday P.M., August 8? Thanks, Doctor, for "them kind words".

THE SACRO-ILIAC TECHNICIANS—

are getting their program planned in plenty of time. The society will meet at Hotel Stinson, Cincinna on July 9 and 10, Dr. George Goode of Boston is president and Dr. Walter Shy of Sturgis, Mich. is program chairman.

DR. ROY G. TRIMBLE—

of Montezuma is in California taking a years work under Dr. T. J. Ruddy. Roy writes that Harry Taylor is also out there but will soon be in Denver with the Lamb Hospital.

At the Half-Way Mark

We have finished half of this first semester of the college year. The time has gone altogether too fast for most of us. There is always much to be done yet. Every class in the college has been hard at work. We all begin to feel just a little the strain of a deeply concentrated mental gymnastics. But we can take it and we will. We are not going to let down now with such a good record for the first half. We are not going to let the months of Thanksgiving creep in when we have our mind on Chemistry. We are not letting our mind wander to the obligation of a date for that good picture show that we are studying Physical Diagnosis. We are not taking time off to plan for a big dance when we are settled with a Physiology on the desk. We are not planning to rid ourselves of five or six patients during the Xmas season for we know the other fellow cannot do as well by them as we. We are working harder than ever during these next several weeks in spite of the red figures indicating vacations.

Or are we?

DR. WALTER HOPKINS—

of London recently sent us a picture of himself taking part in a stag hunt. All we have to say is that if we dressed that way to hunt stags they would be different stags from what he means. Thanx Hoppe for the good picture and we hope you got a stag.

DR. H. V. HALLADAY—

will make the Ohio Lyceum Circuit Beginning December 6.
I.O.A. Bulletin

President's Letter

As Thanksgiving Day comes nearer and the farmers gather in their year's harvest, I like to think of the spirit of Andrew Taylor Still watching the riepening of the third century planted years ago. Like many another husbandman, he would not be entirely satisfied with the harvest. He thought the incompetency of the toilers in his field had prevented the gathering of the perfect crop. Not necessarily, let us hope that as he gazes over the Osteopathic fields he will say, "Well done!" And let us say, like the good farmer always does, "We will do better next year.

Not much state news this month; we hope it is the silence of a hard-working profession rather than the silence of inactivity. This month saw the entry into our library of a volume and then to drop a line to the Log Book and let us know the showing of the pictures. A report in the local paper shows that the United Airways is in truth the safest way to travel. In the last ten years there have been only four accidents resulting in loss of life. Mr. Butler gave us these figures but did not tell about the low percentage of accidents and the picture showed some of the many incidents that are and attention every detail is given before a flight is OK. You should see this picture.

October 22

The United Airways now show a Matinee trip from New York to San Francisco was the treat in movies for the day. Mr. Davis made a local office call and added interesting aries about air travel (through the showing of the picture. A report in the local paper says that the United Airways is in truth the safest way to travel.

October 29

Years ago a popular form of entertainment was the "Chalk Talk." Some of you old timers may remember Ross Crambo who was one of the original chatauqua chalk talkers. On this Friday night we have the privilege of seeing just what the old timers that was a pretty high class entertainment. We all know that this kind of amusement can be brought up to date and he certainly deserves the fine compliments we heard. We were indebted to Dr. Pagen for his appearance.

November 5

One of those days when everything went along right. The Emeem is sometimes a little nervous over the outcome of an occasion which may have been just along like the new Rocket. Sigma Phi has again stepped into this picture and has taken over the planning of the majority of the Friday programs. Howard Sporck brought Jo Lilly, our local big game hunter, to the assembly. Jo has hunted big game of all kinds all over the world and has a picture of his last hunt which was up near the North pole and he was after whales. Got them too and presented him with enough Sporck a package. It proved to be one of those straw hats with colored balls of silk around the brim. Sporck donned it amid cheers and acknowledged it with thanks speaking perfect broken Pennsylvania Dutch. A number by the band closed the assembly.

Try to find another institution where we can have such a fine movie and enjoy a good talk and some good food in the student body. The band as usual was present and is now well organized that encores are demanded.

October 15

Entertainment at the Friday assemblies is always planned to take the student body away from the usual day's work into an recreation or into realms of that not closely related to our course of study. On this day we took into New Mexico and Texas visiting the famous Carlsbad Cavern, the White Sands of Alamogordo, Santa Fe, Taos and into Texas to take a quick bus trip thru the exposition grounds.

THE LOG BOOK

A son who occupies the presidency of the college for another year was called Dr. Becker to the platform and in the name of the Iota Tau Sigma presented the program with copy of Osteopathic Mechanics. Not to be outdone by the Iota Tau Sigma, the advantage of Dr. Becker's presence on the day and presented him with enough new waste baskets to equip each classroom with one and to there stood Dr. Becker with a book in one hand and a waste basket in the other. He jumped up with another presentation. For some deep dark secretive reason he made a few words and then we were manifoldly surprised to find that the library of Dr. Halladay take us to all parts of the country and are thoroughly enjoyed by the entire student body. The band as usual was present and is now well organized that encores are demanded.

A good talk and some good food in the student body. The band as usual was present and is now well organized that encores are demanded.

Assemblies

Cincinnati

The annual meeting of the osteopathic profession planned for next year under the direction of Ohio osteopaths has been announced and has started to function. The dates have been set from July 11 to 15. The headquarters hotel will be the Netherlands Plaza. Below we list the membership of the local group that are most likely to want to get in touch with. This is not a complete listing of the profession that will help to make your next convention bigger and better. A group of conventions we hope to give you last minute news of what this committee is doing, so watch for "Cincinnati!"

News from Arkansas

Many of you who have graduated school, 1926, will remember and you may have treated a colored boy by the name of Leonard. I believe he is a member of the college in a little wagon. Leonard was not wasting his time fishing for quinces after stopping at several stands and now we have some quinces preserved as a reminder of the trip. The weather turned out well. Driving back I had to have the car windows open and it was like a preacher except for the Fall colors everywhere. The letters received since indicate that a return trip is to be at some future date. These meetings with coaches seem to be getting stronger for them all the time.

H.V.H.

After taking excellent osteopathic treatments for approximately ten years I have acquired some of the technique of manipulation of muscles and have been using this on the athletes here in the Arkansas State College.

The boys respond and we have had only one serious injury since I have been here, that being to a player. My experience in training has been very valuable to me and the boys are in the peak of condition and are ready for the Southern Championship.

All of which proves that Leonard was not wasting his time fishing for quinces after stopping at several stands and now we have some quinces preserved as a reminder of the trip.

DR. E. M. HUBBELL
D.M.S.C.O. 25, died May 22.

D.S.C.O. 25, died May 22 of general cause and just recently received this information from Mrs. Hubbell. Following his graduation he was a member of the college in a little wagon. Leonard was not wasting his time fishing for quinces. I have some quinces preserved as a reminder of the trip. The weather turned out well. Driving back I had to have the car windows open and it was like a preacher except for the Fall colors everywhere. The letters received since indicate that a return trip is to be at some future date. These meetings with coaches seem to be getting stronger for them all the time.

H.V.H.
Activity Day

On Friday, December 19, the Osteopathic Activity Day was held at the College, and was a complete success in every respect. About twenty-five practicing physicians attended the morning lectures, and it was the consensus of opinion among these men that the information obtained, and the pleasant visit, were well worth their time.

The clinics in the afternoon were well attended, and much interest was shown in the examination of the patients. Dr. Becker presented a case of mitral stenosis following rheumatic fever, in a boy of seven. Also in his clinic there was presented a very interesting case of multiple sclerosis in a young man age 30. Both of these cases have been in the clinic for some time, and of very definite interest was the improvement they are making under osteopathic care and treatment. Dr. Facto’s clinic was also of real interest and equally well attended.

Dr. Hannan of Perry was the guest speaker for the assembly. Rather than make a formal address, he chose to present to the group some measures he has found to be of definite value in general treatment and practice, which he said are not to be found in class rooms or textbooks, but in the field of actual experience. A great deal of interest was given him and we are very grateful for his help in making the morning of value to us all.

After and before the clinics our guests visited the improved and enlarged laboratories. Dr. Owen arranged the same display (Continued on Page 4)

The Des Moines Still College family extends the Season’s Greetings and wishes for you and those whose happiness is yours, a full measure of Christmas Joy and Success for the New Year.

Christmas Plans

What will they be doing Christmas is answered below as fully as we could get it from the wives, and they should know. It looks as if plans have been made, and with a white Christmas quite likely, Des Moines decorated, and the smiles already appearing, this should be one of the most joyous.

Dr. and Mrs. Arthur D. Becker—will drive to Florida to enjoy a Christmas without the danger of slipping on the ice of Des Moines. (Look in the trunk compartment and maybe you will find us too.)

Dr. and Mrs. R. B. Bachman—have planned a family reunion at home.

Dr. and Mrs. B. L. Cash—will be at home with the four youngsters.

Dr. and Mrs. Ira L. Facto—will be at home, and expect relatives to join in the celebration.

Dr. and Mrs. Glenn E. Fisher—will drive to Oskaloosa and Gibson to visit with relatives.

Dr. and Mrs. Ira Gordon—will be at home entertaining their two boys, who are both in college out of town.

Dr. and Mrs. Howard Graney—will drive to Perry to visit with relatives.

Dr. Mary Golden—will drive to Oskaloosa and Gibson to visit with relatives.

Dr. and Mrs. H. J. Halladay—will entertain at home.

Dr. and Mrs. H. J. Marshall—will be at home. A big family dinner is planned.

Dr. O. E. Owen—expects to spend Christmas at Indianola.

Mrs. K. M. Robinson—will remain in Des Moines attending a family dinner.

Dr. and Mrs. E. F. Leininger—will remain at home during the holiday season.

Dr. and Mrs. J. P. Schwartz—will enjoy a big family dinner at the home of J. P.

Dr. and Mrs. John M. Woods—expect to be at home Christmas, and during the vacation will visit with relatives out of town.

CINCINNATI

Next July
The Xiphoid Chapter of the Atlas Club during the past month has seen activity at its chapter house, 2141 Grand Avenue, and invited guests had an enjoyable evening.

The plans for deferring pledging laid down by the Inter-Fraternity Council at its September meeting were laid out as arranged, to the satisfaction of all fraternities. The Council approves the plan to extend the cooperation and fine sportsmanship shown by the members of all the organizations, and extends its congratulations to the fraternity members, pledges, faculty, and friends.

Local Council

On November 10, the Sigma Sigma Phi held a Dutch lunch in the Log Cabin room of the Hotel St. Anthony, and had as visitors Dr. McNerney and Dr. DeVine.

We are pleased to announce that the following students have been pledged to the Sigma Sigma Phi honorary fraternity: Tori- olo, Geoken, Hrynek, Scott Fisher, Wooliscroft, Barnes, Woodruff, and Calvert.

Following the memorial assembly for Dr. A. T. Still, Dr. Geo- Still, and Dr. S. S. Still, on Friday, December 3rd, the members of Sigma Sigma Phi placed a wreath on the grave of Dr. S. S. Still, in the Woodland cemetery; and also attended the Osteopathic Day held at Still College of Osteopathy, in memory of his great acts and foresight in the interest of Osteopathy.

The Sigma Sigma Phi has planned a great day for Friday, December 3rd, for the members of the association. The program, under the leadership of the chairman, Honorary Fraternity. His paper on the "Duties and Qualifications of an Intern" was outstanding and beneficial.

The last banquet of Psi Sigma Alpha was held November 23 in Royce's Uptown, where we heard a very practical talk on "Infant Feeding" by Dr. Mary Golden.

We, the members of Psi Sigma Alpha, take this opportunity to extend our wishes and warm greetings to the faculty, students and alumni of Des Moines Still College, and to alumni and friends.

N.O.I.C.

We are in a much better mood than last month. We at long last have the student list of local representatives for each of the ten frats and sororities that make up the Council. The last one was hard one to get, but no list would be complete without his help. Those of you belonging to the Oddfellow's will keep your Cincinnati representative in mind, and if there is anything special you want at the convention, let him know.

Delta Omega sends Christmas greetings and best wishes for a Happy and Prosperous New Year to alumni and friends.

Most of the active members will spend Christmas at home. Anna Slocum, Ruth Paul, Malcolm Gould, and Evelyn Ketman and Velma Gehman in Des Moines. Gertrude Gandell and Bannister Moeller will spend the holidays in Iowa City. Georgiann Harris, Dorothy Holton and Louise Michael will be in Ohio, and Rebecca Richardson will go to Kansas.

Everyone has good intentions of getting caught up either in school or work, and probably will not get nothing done. We do hope everyone will be rested enough to get back to school January 3.

The past month has been a very full one, a lot of "happening" and a lot of "resting". The last one was a hard one to get, but no list would be complete without his help. Those of you belonging to the Oddfellow's will keep your Cincinnati representative in mind, and if there is anything special you want at the convention, let him know.

Oddfellow's N.O.I.C.

Please send your present address as soon as possible to the chapter house, 2141 Grand Avenue, or the secretary, KMD.

Bet chapter wishes to take this opportunity through the medium of the "Log Book" to extend greetings to the faculty, students and alumni and friends of Still College.

The past few weeks have been filled with activities, and the members of the fraternity are looking forward to the next meeting of the Council, which will be held Thursday, November 18.

Delta Omega-Gertrude Helmieke, Cincinnati.

Tota Beta-W. W. Curtis, Dayton, Ohio.

Phi Sigma Gamma-J. C. Spence, Cincinnati.

Psi Sigma Alpha-J. W. Hayes, East Liverpool, Ohio.

Sigma Sigma Phi-W. E. Bailey, Livonia, Michigan.

Theta Psi-K. P. Jones, Middletown, Ohio.

Next month: We are too out of this trenched before Christmas, it is a pleasure to wish all of you a very Merry Christmas and Happy New Year.

H. V. Halladay, Exe. Chm.
Yo-ho, Ohio!

A Merry Christmas and a Happy
Prosperous New Year

There may be those to whom this sentiment has become trite and lacking in originality, but to the careful and rather critical observation of people, however, leading me to believe that it expressed more genuinely good will and kindly wishes than almost any other statement in written or spoken language.

Before another issue of the Log Book is in the mail, the New Year will have been ushered in with mirth, jest, with joyous shout, with toast and sentiment; and with much serious thought. I firmly believe in the jest, the shout, the toast and the sentiment and heartily approve of the serious thought.

Do you still make New Year's resolutions? I am free to confess that I do. I would deplore a New Year without a brief but thoughtful glance into the past year to note trends and errors. I would feel negligent if I did not take a serious look into the future and make plans for myself to do better work, to be more analytical in my thinking and reading, and to place more kindly interest in my associates, my neighbors and my casual acquaintances.

And then, too, at this time of the year find it easy to crystallize my thinking on the somewhat longer view—something more than just from year to year. I believe in the five-year program and the ten-year program. Here in the Des Moines Still College of Osteopathy we are asking big things of ourselves. We are setting up a program of development and expansion which will require not only the long view but will require work and effort and accomplishment that only the long view will make possible. We are happy in the evidence of real and measurable progress in 1927. Such encouragement serves as a torch to light the way to new heights and clearer vision.

Again, in all sincerity, may we extend to each of you our cordial wishes for A MERRY CHRISTMAS AND A HAPPY NEW YEAR.

Assemblies

November 12

It was a little hard to come back to work the day after the Thanksgiving with the always watch the parade. However, we were on hand and enjoyed another surgical film, thru the courtesy of LaPorte County Hospital. Following the film was the management of a normal breech presentation, and the discussion was very complete in detail, with the addition of animated draw-ings to make the subject matter clearer. We understood that Dr. R. V. Vinol had taken a movie of a Caesarian operation at the Des Moines General Hospital and we were able to see this as soon as it is edited.

November 17

The increased interest in photography made it necessary to have an expert meet the student body and explain about the use of the so-called candid camera. Mr. Vinol of the Des Moines Kodak store in Des Moines brought in a number of different sized and colored films and explained the many variables found in size, price and utility. He stated that unfortunately the instruments he displayed were not samples to be given away, and we regretted it also, for one of the several would have made a fine souvenir of the occasion. We hope to have Mr. Vinol back again so that he can take two hours to give details of the art of photography.

Freshman Reception

October 12 was designated this year as the date for the Fall Reception welcoming the members of the new class. With Hoyt Sherman Place as the setting, and a nice crisp night (no rain) the majority of the student body were there, with their escorts or friends.

Dancing and cards were the major items of entertainment following the introduction as the new students were met at the door by members of the Board and Faculty. The comfortable chairs in the reception room were occupied most of the time, conversation being in order.

The first dance following the introduction was held in honor of the new students, who were called to the Seniors' platform and given small paper mortar board caps and a horn. The caps were to signify their start toward the wearing of the real article, and the horns were to blow in self-defense as they met upperclassmen.

The time passed all too quickly, and all expressed their appreciation of a very enjoyable evening, all furnished by Mark Gerlach and his band, using four members of the student body. It was excellent, and the direction of several nearly stopped the dancing.

NEXT CLASS MATRICULATES SATURDAY, JANUARY 22
Faculty Entertained

Inspired by the acquisition of a new male member to the faculty of the college, Dr. J. P. Schwartz arrived early and made use of the house, making use of Dr. Max Bergau as an alibi for getting the faculty together for a well-earned and much-needed evening, so we hear. We did sneak out for a few minutes about ten, when the singing started, and caught a glimpse of the peak from the house to past the end window. Dr. Schwartz was at the piano leading the vocal efforts of Drs. Bachman, Forsman and Marshall. We had not suspected that these dignified physicians were so talented, and we still do not believe it. Our ears told us so. Whatever happened at the meeting, the same story has been told by every member present, so it must be true, or as a whole they have a remarkable memory for written instructions. Here it is:

The invitation said Buffet Dinner at 7. At 6:45 the hungry bunch was present. They were received in the he-men den, complete even to a real fireplace. At the bell, there was a rush upstairs, where each was served with food and was seated on a table that must have been reinforced concrete. Our party was on the second floor, and we were served from a table that has everything in the way of cold fish, cheeses, pickles and other relishes. Then to the living room, where large mahogany tables in the form of luncheon tables for four. No use to elaborate on the food, for it was delicious and dessert were served later, and so an excellent meal was disposed of, second helpings being in order.

Dr. Becker took the initiative and opened the meeting for some business to be transacted, and then introduced Dr. Max Bergau of Hawaii. Dr. Bergau briefly spoke of the educational duties at the College. He was greeted and served from a table. The meeting was called to order, and the regular business was transacted with the usual teaching plans of our university.

The remainder of the evening was taken with conversation and the musical efforts mentioned above, and at a late hour the guests departed with sincere thanks to Dr. J. P. for an evening that will not be forgotten, but will re-echo in our minds until the echo answers "encore".

DR. J. J. HERRIN—
of Purcell, Okla., sent us a clipping from the paper showing local high school teams with Dr. Herrin as official physician. John reports no serious injuries this season, and wishes him the best of luck. Another proof of the efficiency of Osteopathy.

DR. AND MRS. H. C. TOEPFER—
of Fort Dodge, Ia., announce the birth of H. Charles Toepfer, Fort Dodge, Ia., December 11 at Denver, Colorado. Congratulations.

Max Bergau

Sigama Sigma Phi made and carried out the plans as usual for the annual Memorial Assembly. This day is planned to give us the opportunity to pay tribute to the three members of the Still faculty who have left us, and are missed so much to our own welfare.

Dr. Arthur D. Becker spoke briefly on the life and work of Dr. D. J. P. Schwartz in our college. We are happy that this is the twentieth year since his death. He stressed the fact that Dr. Schwartz was a great man and a great teacher. Dr. A. T. Still before the medical profession had recognized him.

Dr. J. P. Schwartz eulogized the work of Dr. George Still, who died fifteen years ago. In his talk he not only told of his great skill as a surgeon, but emphasized his recognition of the value of osteopathy in the care of surgical cases.

Dr. Halliday told of the life and work of Dr. S. S. Still, founder of the college. Dr. Halliday has been a member of our faculty for many years as one of our authorities on Anatomy.

Dr. Cuthbert Smith was a visiting physician to our college, and was called upon to talk for a few minutes. He referred mainly to the work of his famous father, Dr. William Smith, and displayed the body the first osteopathic diploma was issued. He was indeed, for this valuable document is hand engrossed and signed by the physician, Doctor, and issued to Dr. William Smith.

Following the assembly at the college, the Sigama Sigma Phi fraternity placed a wreath on the grave of Dr. S. S. Still, our founder, who is buried in Woodland Cemetery in Des Moines.

Activity Day

(Continued from Page 1)

The college had at the 1937 convocation.

The dance at the Fort Des Moines was attended by well over 100 couples, all of whom were evidently enjoyed the evening to its or their fullest capacity.

The student committee wishes to extend its sincere appreciation to the faculty, student body, Polk County Association, and visiting physicians, for their cooperation in making this an instructive and entertaining day. Owing to the success and enthusiasm afforded the program, it is highly probable that it will be made an annual affair. An earlier time in the year would have been more desirable, but unfortunately many men of all ages from all over the state would like to come if driving conditions were favorable.

Max Bergau

B. S. M. A., Ph. D.

After several years of research and study in the sciences and more time spent in clinical laboratories, Dr. Max Bergau of Honolulu, Hawaii, decided to study Osteopathy as the most scientific of the known types of therapy. He also decided to attend the Des Moines Still College of Osteopathy, feeling that it is superior in work and opportunities. We are glad indeed to have Dr. Bergau with us, and we feel that the new man of science has turned to Osteopathy believing that it offers the ultimate in therapy.

Dr. Bergau was born in Hawaii, and is, therefore, a native of the United States. His early years were spent there, but he came to the States later to attend Dayton University and the Junior College of Pasadena, majoring in chemistry. He then went abroad and spent five years at the University of Freiburg, much of this time in biochemistry and personal tutelage of Prof. Reichow. Dr. Bergau's sixth year in Europe was spent in connection with the Chinese Medical College, and it was there which he did research work in the Tropical Hospital at Hamburg.

Following his graduation with the degree Ph. D., he returned to the Hawaiian Islands in charge of the laboratory work, and later did research work for the American Sugar Co. This paper which was a result of this experience was read at the trip to Des Moines to enter our college.

Dr. Bergau is assisting this year on the faculty, teaching the subjects of Bacteriology, Serology, and Public Health and Sanitation.

Polk County

Polk County Osteopathic Association held a monthly meeting at Hotel Chamberlin Friday, November 12, at 6:30 P. M. Mr. Emery and Mr. LaRoque, students of the college, were present. The guests described plans for an "All Still College Activity". The program con- sisted of Post-Graduate work at the College will be followed by dancing in the evening at Hotel Fort Des Moines. It was moved to the president appoint a Booster Committee to assist in this undertaking. The program of the evening consisted of a talk by Dr. B. L. Cash on "The Diagnosis of Gall Bladder and Calculi by X-Ray". The distribution of the "Osteopathic Magazine" was discussed by the group.

Following the meeting the members adjourned to Hoyt Sher- man Place to participate in the College Freshman Reception.

J. Lawrence Berck, D. O.

DR. S. W. MEYER—
of Algona, Ia., and of the staff of Algona General Hospital, spoke before the Rotary Club of Algona recently on "The Anatomy of the Digestive Organs".

O. W. N. A.

A woman from Europe speaking in Des Moines this past week told of her experience at the Congress of Women which met in Chicago recently. She had taken enough money as she thought for her actual expenses, but her exchange was such her needs were more limited than she had anticipated. She found herself actually starving among strangers in a foreign land. At this time her husband has been exiled and she and her two children are in this country with the door shut in the Futherland. She was a thrifty, upright, law-abiding citizen. In the far East home Tuesday night for the annual Christmas party of two Des Moines osteopathic women's groups. She was assisted by Mrs. Harry L. Faust, president, and Mrs. Robert Fagen and Mrs. Garth Anderson from the college staff. She was given a trip to Des Moines to enter social activities. Each guest brought a gift for the baby clinic of the college.

The MARIETTA OSTEOPATHIC HOSPITAL—

against retinablastoma, Ohio, filled a complete section of the Marietta Daily Times issued December First. It marked the tenth birth-day of the institution and is certainly a notable piece of educational literature. The group at this hospital deserve to be congratulated for the fine work they have done in the past and we hope the institution continues to grow and expand in its every service!

DR. JOHN H. STYLES—
of Oakland, Calif., died recently. Dr. Styles will be remembered for his work at the College and his efforts in the Log Book and as an officer in the college for fifteen years ago. To his family his passing is a rude shock. Dr. Styles was born in Des Moines, May 11, 1923. For the last several years Dr. Styles has been associated with the Cantilever Shoe Co.
