Our Department of Diagnosis

When a patient places his case in the hands of a physician he is expressing a confidence in that physician’s ability to do a number of things. The patient feels that the doctor is capable of finding the cause of the trouble as well as recognizing the effects. He also feels that the physician is capable of administering the proper treatment based on the clinical findings in the case. Students attending the Des Moines Still College of Osteopathy are trained to use the many methods of diagnosis. They personally make the tests necessary to determine the pathology. Their contact with the patient begins with his or her registration for examination, and treatment is continued until the case is dismissed. Patients can be confident when they consult a graduate of our college.

This department of Diagnosis is under the direction of Dr. Arthur D. Beeker, who teaches Differential Diagnosis and operates the Electro-cardiograph, expertly reading its zig-zags into an accurate diagnosis.

Dr. G. E. Fisher directs the Laboratory Diagnosis, didactic and demonstrative, checking the student’s work in blood, urine, gastric and fecal examination. This routine check-up is made to correct any incorrect diagnosis. Dr. Reves and Ed Zyzelewski make the tests necessary to determine the pathology. The faculty, in general, is prepared to go out graduate of our college.

The Christmas Assembly

School closed for the holidays with a real bang. Sigma Sigma Phi came across with one of the best programs that we have ever witnessed and the only complaint was that it was all too brief. Look over this array of entertainers and you will know exactly what humor the gang left for home.

(1) The orchestra under the baton of the old maestro followed thru perfectly on “Roses in December” without a precept. This new class to enter under the present preliminary regulation. This new class coming to us is the last of this National Monument and we are experienced osteopathic physicians now. The class as a whole has put in a great deal of time and demonstrative, checking the student’s work in blood, urine, gastric and fecal examination. This routine check-up is made to correct any incorrect diagnosis. Dr. Reves and Ed Zyzelewski make the tests necessary to determine the pathology. The faculty, in general, is prepared to go out graduate of our college.

(2) A Movie of the White Sands near Alamogordo, N. Mex. This is a film furnished by the Department of the Interior.

(3) A New Class

Our last reminder.

Some of you will receive this issue of the Log Book before the graduation of the Seniors and the enrollment of the new class. We wonder if the full import of this registration day is appreciated by the majority of you. When the registration for this class closes the Des Moines Still College cannot register another student unless he or she comes to us with one preliminary regulation. This new class entering January 24 is the last class to enter under the present preliminary regulation. This new class coming to us is the last of this National Monument and we are experienced osteopathic physicians now. This new class coming to us is the last of this National Monument and we are experienced osteopathic physicians now. The class as a whole has put in a great deal of time and demonstrative, checking the student’s work in blood, urine, gastric and fecal examination. This routine check-up is made to correct any incorrect diagnosis. Dr. Reves and Ed Zyzelewski make the tests necessary to determine the pathology. The faculty, in general, is prepared to go out graduate of our college.

The evening of January 20 will be devoted to the Senior Banquet. This is being held at Youngers Tea Room and is given.

The Log Book

Atla Clum
H. A. J.

With the return of the members from their homes during the Christmas holidays being a pleasant memory, the climax of the semester is drawing to a close.

The fraternity senior banquet is to be held on the evening of January 21, and although we have no graduating members in this class we are all looking forward to a gala event.

The election of officers held on the 16th finds the following the following men in office for the ensuing term. Noble Skull, Brenton Schiffer, Occupial, Jon Hay, Receptaculum, Howard Johnston, Sacrum, Wilson Simmons, Stylus, Dale Widmer, and Styloid, Marcus Gerlach.

Many new kits are adorning the lunelight now as our proud Juniors prepare for their advent into the clinic, and the limelight now as our proud juniors prepare for their four years here, and have school and fraternity life during the Christmas holidays being a pleasant memory.

Many new kits are justly recast for the ensuing term are included in this program. For these affairs we so hope the next coming semester as recently announced upon his arrival back from his four years in the South (North Carolina) and to the hospital the marble day. So far everything is moving along in a most satisfactory manner. We now rest the few remaining minutes of the evening so perfect.

The next meeting of the West Virginia Board of Osteopathy will be held February 14 and 15, in the offices of Dr. Halladay, 524 Empire Bank Bldg., Clarksburg, W. Va. Applications blanks may be secured by writing Dr. Ed. Theilking, 412 Empire Bank Bldg., Clarksburg, W. Va.

Applications should be filed not later than February 1, 1938.

Osteopathy Without Limitation

Milestones

Admittedly, we are rather profoundly impressed by the fact that 1938 marks the fortieth anniversary of our institution. It is our plan to make 1938 a banner year in the history of Des Moines Still College of Osteopathy.

Birthdays serve a useful purpose in that they tend to crystallize one's thinking. It is a time of checking up and taking stock. It is an occasion for looking back through the years to note trends and progress, and of looking forward to the establishment of new aims, new ideals and new goals.

We are happy and proud in the fact that we have made definite and steady progress in the program of improvement which we set up for ourselves two and a half years ago. It was an ambitious program and we have given unwavering and untiring effort in making it effectual. The many improvements in facilities and equipment, the accomplishments in organization, the raising of scholastic standards, the many evidences of superior morale in the student body are only a few of the steps upward and forward that we have been able to take.

We are beginning to plan and prepare for our week of post-graduate review and clinical sessions to be held about the middle of June as an outstanding birthday party. We plan to make the post-graduate week this year as largely practical as possible with case presentations and case study the predominant note.

The Fall Class of 1938 will be known as the Anniversary Class. It's progress will be a matter of especial interest. It will be the first class enrolled under the new and advanced entrance requirement. We anticipate that many of our friends and alumni will want to be personally represented by having a student in that class. Begin planning now for your candidate for the 40th Anniversary.

We feel that we are well squared away for new visions and higher levels of educational achievement. The ambition is to make Des Moines Still College of Osteopathy more than ever THE COLLEGE OF CLINICAL OPPORTUNITY.

Arthur D. Becker, D. O.

DES MOINES STILL COLLEGE
OF OSTEOPATHY

President ------- ... stopped in Des Moines for a day during the Christmas season visiting with Dr. H. V. Halladay and friends.

Board and Faculty

The last two meetings of this group have been held on December 11, with the close of the semester near at hand it is to be expected that the standing of the student body was given first consideration. Our college seems to be no exception when it comes to some few members of the student body being bid "back to school." The percentage is not very high but we do have enough of them to cause a few worries to some of the professors.

Graduation plans and the matters of business pertaining to the milestone of our institution. It is our plan and purpose to make 1938 a banner year in the history of Des Moines Still College of Osteopathy.

That is not to say, of course, that our students are not living up to their responsibilities. The Becker Trip

Dr. and Mrs. Arthur D. Becker visited friends in Chattanooga, Tennessee, Jacksonville, Florida, Eustice, Florida, and Baton Rouge, Louisiana, during the holiday vacation. They traveled by autoobile and report a fine trip in every way—good roads, beautiful weather, and a pleasant and restful vacation.

Odd McIntyre Again

Odd quite often prints something very pointed. We quote below from one of his recent Sunday columns.

In the waiting room of a prominent Madison ave. physician hangs this enlarged photostat of a recent statement of Dr. Robert Hutchinson, head of a large English hospital, and appearing in the London Lancet:

"So few of the students for whom we set up for ourselves two and a half years ago, are showing signs of any substantial upward progress. It is an occasion for demonstrating the validity of this thesis, Dr. McGraw let his twin develop like a traditional baby. Twin Jimmy cannot skate, refuses to climb down from any stand even two feet high. When in any predicament, his only way of escape is to beat his head against older people for help."—Des Moines Tribune.

Polk County

The Polk County Osteopathic Association will hold their monthly dinner meeting January 10, at 6:45 p.m. at the Des Moines General Hospital. The program for the evening will consist of an interesting illustration discussion on the importance of the endorines in studies. Dr. Freda Lotz-Kellogg, of Wichita, Kansas, will be the speaker. Dr. Freda Lotz-Kellogg's name is familiar to us all. She has been a member of the Osteopathic Health Institute since its inauguration. She is an outstanding woman who has made many contributions to the field of medicine. She is a leader in the movement for improved standards in osteopathic education and practice. She is a true friend of the osteopathic profession and her work is widely recognized.

each semester to the graduating class by the Board of Trustees of the college.

Cincinnati

The year has started. It is time for you to make a start also. Your program committees is at work. Your other committees are organized and the preliminary plans having been made, the 1938 Convention is on its way.

Cincinnati has much to offer you in the way of educational facilities and entertainment and its central location. We know you will enjoy the historic sites, the fine buildings and the beautiful parks. We do not attend a convention solely for the purpose of being filled with highly seasoned technical information. We go to enjoy the trip to and from and at the city itself and we expect to find many interesting things in Cincinnati aside from the fine program and entertainment being planned. We want to see you there and we want you to partake in another big year for Osteopathy.

Begin planning now for Cincinnati July 11-15.

DR. FREEDA LOTZ-KELLOGG—of Denver issued invitations for the opening of her new Osteopathic Health Institute January 1. Denver is rapidly developing from an Osteopathic stand point. We congratulate Dr. Lotz-Kellogg and wish her continued success.

DR. J. W. HALLADAY—of Afton, Okla., stopped in Des Moines for a day during the Christmas season visiting with Dr. H. V. Halladay and friends.
At this beginning of the New Year instead of giving the conventional greetings I merely wish to say "Amen" to the New Year's resolutions on the front of the current A. O. A. Journal. May we all in our bit to fulfill those objectives.

The annual state meeting will be held at the Hotel Savery in Des Moines, May 3 and 4.

The program chairman, Dr. Laura Miller of Adel, is building a very instructive and practical program for those days.

Tentative plans for a circuit of the various districts about March 1 are being carried out by the members of the various districts will be appreciated.

The following applications for state membership have been received:
- Dr. Dale S. House, Dubuque, Iowa
- Dr. E. S. Leininger, Des Moines, Iowa

O. W. A.
A Healthy Afterglow to a Great Convention

It is very interesting to note the reaction in a professional group following a National Convention. Those of the Osteopathic profession in the State of Illinois should be very proud of the reaction of their own group. Perhaps a direct result of their highest national Convention was the contribution of two splendid Auxiliaries to the organization of osteopathic womenhood. This is one of the finest tributes the workers in Illinois can receive.

As part of the Osteopathic Women's National Association I desire in this public way to congratulate these Illinois women for their splendid professional spirit and welcome the Chicago Osteopathic Hospital Auxiliary into the National group.

In one sense of the word Illinois stands for Osteopathic leadership in the profession and it is most fitting that the womanhood of Chicago should take their position in organized leadership.

Mary E. Golden, D. O.

DR. ROBERT BACHMAN—will not be out-done by his children. During the Christmas vacation the son could not get out and the daughter of the band and the orchestra did not have the same quality of the other gathering at that time of the year and the band and orchestra were invited to play for the young lady nearly fainted during this demonstration.

The office force on the second floor was ready with information and literature and the many patients and bank of treatment appointments or we would still be listening.

The Sophomores provided us with the interest in courses and the Xylophone which was accompanied by Miss Fagan.

The Freshmen under the guidance of Johnson put on a program that brought out a lot of laughs.

Dr. Halladay, plugging for the Southwest, then present, with his wife and member of the faculty with a cactus and a sample of the White Sand, the Sigma Sigma Phi pledges helping with the distribution of presents.

A number of the orchestra featuring Mac on the piano is something to remember too.

Dr. Becker took the floor and following the announcement of the Open House January 10, complimented the program and expressed the good wishes of the college faculty. He added admonition to drive carefully was timely and we hope will be heeded by every student and the college wishes to express its appreciation to the Student Committee and Dr. James Sharon of the Board of Health for their part in making our Open House a success.

The Sophomore Pledge Class had been awarded a new set of marching uniforms and the four groups in the Orchestrathon were in high spirits. The band and orchestra were invited to play for the Young ladies and the band and orchestra were invited to play for the Young ladies.

The success of the program has already been sufficiently improved to have started another before the end of school. In order to take care of those in the city who wish to visit the city the orchestra has some duties aside for this purpose. It is not wise to let visitors in at any time during the day. Classes are disburdened the visitor is often left with the wrong impression of what the great work is being done in the work of the osteopathic physician. We are certain that the time and program in this case secured the results we wished.

The Christmas Assembly

(Continued from Page 1)

(3) Carl Ellis and gang furnished some nifty melodies that took up too little time. Bill Jacobs of Younters Tea Room orchestra, Chuck Pray of WHO, Hubert Ellis of Harold Morgan, Larry Brant of WHO and Carl put on several numbers that were much encored. The boys had to hurry away to other appointments or we would still be listening.

Lang Syne for the Old Seniors for their part of the program a dancer from East High. Miss Corey proved her ability and Miss Banks was a double accompanist. An encore was demanded.

(5) The Juniors put Don Lang with rope on with Benny Devine fooled so it had to be hard to solve.

(6) The Sophomores provided us with a five by Ten Taylor doing some difficult numbers on the Xylophone among which was the one Dec. She was accompanied by Miss Fagan.

(7) The Freshmen under the guidance of Johnson put on a program that brought out a lot of laughs.

(8) Dr. Halladay, plugging for the Southwest, then present, with his wife and member of the faculty with a cactus and a sample of the White Sand, the Sigma Sigma Phi pledges helping with the distribution of presents.

(9) A number of the orchestra featuring Mac on the piano is something to remember too.

(10) Dr. Becker took the floor and following the announcement of the Open House January 10, complimented the program and expressed the good wishes of the college faculty. He added admonition to drive carefully was timely and we hope will be heeded by every student and the college wishes to express its appreciation to the Student Committee and Dr. James Sharon of the Board of Health for their part in making our Open House a success.

(11) The closing number consisted of Jingle Bells and Auld Lang Syne by the audience and orchestra.

Dr. Jennie Devine, of the city, acted as Emcee and gave the right answer when it was needed. The college is to be congratulated upon having in its midst and among its alumni a talent that can plan and put over a fine Christmas program like the one this year. It is a good thing that it is better to be alive and belong to the Still College Gang.

Dr. AND MRS. P. J. GEPPARTH
Of Waterville, Me., announce the arrival of Paul, Jr., December 11. Weight 7.

They Say—

I make it a practice to do a certain amount of reading each month. Now I am interested in what is new in my specialty but I like to keep up with other lines also and you whoever and whereever you are should be doing the same.

Mock and Brown have a fine article in the January issue of the Journal of Surgery, Gynecology and Obstetrics, titled "The Conservative Treatment of Gall-bladder Disease." The conclusions of these articles are especially notable. We quote.

"(1) We believe that the present conceptions of the medical management of Gall-bladder disease using low fat, low choi
dine and the sacro-tail in the latter are a correction of the physiologic basis.

(2) On the basis of our studies and work, we believe chronic gall-bladder disease, we have found that the hourly feeds decrease the gall-bladder and emptying of the gall-bladder, ketchonomy acids to stimulate flow of hepatic bile and an easy digestion to diminish the irritability of the gastro-intestinal tract, effectively relieves symptoms and reduces the incidence of the disease in the majority of cases."

J. P. Schwartz, D. O.

I have recently read of vital attributes of internal seed used in many forms that are affected by lesions. These lesions exert an influence on the specific manufacture of Reladex in the ovaries that causes relaxation of the ligaments of the symphyses pubes and diminish the irritability of the tube. The greatest relaxation has been demonstrated in guinea pigs. The symphysis pubes of more than one inch has been obtained.

Also in Pulmonary Meniscus due to the symptoms vary from those of mild respiratory infection to severe forms resembling tuberculosis. It is evident that the hormones are important causes of pulmonary disease. Dr. Max Borgau.

The first article in the January issue of Texas Medicine is interesting and of an expositionary nature. I still wonder why this growing patient did not drop in and see one of our osteopathic physicians there in New York. His probable trouble is a lesion, but he could have had the fun of finding out about the ten M. D.'s that he writes about. I hope by this time that he found a doctor who in turn has found the cause and removed it rather than treated the effect.

E. Harwood.
The New Class

At the time of writing the final registration date for the incoming class has not arrived. We are happy to report that as it stands the number is more than double the registration at the same time last year. Early returns indicate that Iowa will lead in number of new students but that Michigan is well in tow with their usual generous contribution. We see one from Wyoming and another from New York so the East and West meet. A more complete classification will be given next issue.

So far the class has been busy with the usual smokers and other entertaining features planned to acquaint them with the organization of the student body.

This increase in student personnel is augmented by the return of several old timers who had dropped out for a time. We welcome both the new members to our student body and the ones who have staged a real comeback.

Board and Faculty

The usual monthly meeting of the board and faculty was held February 4. Preliminary to the general discussion the board met and took under consideration several items having to do with the increase in efficiency of the college and plans for the 40th Anniversary Review and Post-graduate Week to be held early in June.

At the faculty meeting Dr. Gordon gave an informal paper on Arthritis bringing out some personal observations that are not found in the text books. This enigma of pathology has never been completely solved and much detrimental treatment is being used as was plainly pointed out by Dr. Gordon.

Dr. Becker, in closing the meeting complimented the faculty on the fine work of the past semester and urged the group to “keep bearing down.” We are running a college of osteopathy and not a playground. The profession expects us to graduate trained osteopathic physicians and we will do it,” he said.

Dr. Ernest Powell, of St. Paul, Minn., was featured on the front page January 28 all dressed up as King Boreas, at the 1938 Paul Winter Carnival. This is certainly a high honor for one of our profession.

Our Department of Physiology

The study of any therapeutic method must take into consideration a number of basic sciences the thorou understanding of which is necessary in the development of a physician. Physiology is one of these and, since it deals with the normal functions of the body, must be studied in all the detail that is possible. There are many things going on within the body that are not well understood by even our most learned scientists and also the science of physiology is many years old there is constant research in progress and the teachers in this department must keep in constant touch with the latest ideas and must be able to present this new material to the students to aid in solving the mysteries of disease.

Dr. O. E. Owen is responsible for the first two semesters of this work under the heading of General Physiology. This course, extending over the entire year, includes the study of the cell, its metabolic processes, the digestive, endocrine, muscle, circulatory and respiratory physiology. Laboratory periods each week cover the didactic course and enable the student to see and apply the principles discussed in the lectures.

Dr. L. L. Facto spends an entire semester with the subject of Nervous Physiology. This is a course consisting of a great deal of detail in the exposition of the nervous system. Those who know Dr. Facto appreciate the fact that he leaves no stone unturned in this study and its application to the principles of Osteopathy. From a standpoint of diagnosis, prognosis and treatment the nervous system must certainly be the starting point. It is a well known fact that our profession boasts of a clearer understanding and a greater appreciation of this system and it then becomes necessary for us to enter into this study realizing its importance in our therapy.

The Physiology Laboratory at the college has recently been enlarged and the equipment augmented with the latest instruments for the complete demonstration of physiological processes. Material for this work in the form of frogs, turtles, etc., is supplied in ample quantity for the completion of all experiments and each student is given the opportunity to see these reactions repeated until fully understood. The course includes the preparation of a note book that must be completed satisfactorily.

Our Department of Chemistry

Chemistry is another of the basic sciences that is an integral part of the training of any physician. It may seem strange that physicians being trained for osteopathic practice should be required to follow thru the progressive subjects under this heading. It must be remembered that the modern physician must not only understand but must be able to make many diagnostic tests in the determination of the disease. The physician, by means of his

Senior Affairs

The three important ceremonies in honor of the graduating seniors were carried out as usual but with the unusual features that always make one class differ from any other.

Class Day, held January 14 opened with music by the college band. Then President Reves took the floor. In his talk he pointed out the many advantages of the college and in the name of the class promised to uphold the principles and aims of the college. Taking advantage of his role as a prophet, he talked of the future of osteopathy and the necessity of the students to work for a larger enrollment at the college. Reves then introduced Fagen.

Bob Fagen, the historian of the class, reviewed the class from its initial start four years ago and the original membership and adding and subtracting as the semesters progressed. In this case most of the originals were graduating.

Reves, again appearing, this time in the role of a prophet, made the rounds with predictions for the class. If the degree of success predicted comes true we will all be proud of having known the group.

Zyzelewski then offered the Will which was filled with the customary legal phrases deftly hiding the real value of the bequest. It was evident that the class desired to leave their lower classmates only those things that might cause them some embarrassment as they went on their way. We hope the intent, which seemed to be directed to their best friends, does not cause the latter to lose sleep.

Reves, again with the reins, called Dr. Becker to the front and presented him with a beautiful knife as a remembrance of the good will of the class. Dr. Becker responded appropriately.

Taking advantage of his position on the stage, Dr. Becker made the awards to the class. The college awards for extra time in the departments were to Clifford Barry for his additional time in the Clinic and to Ed Zyzelewski and to J. B. Miller for their aid in the Anatomy laboratory. The Sigma Sigma Phi awards were made to Robert Fagen for his service to the college and to J. B. Miller for superior work in osteopathy.

Class Day for the January, 1938 Class closed with music by the band.

On the evening of January 20 the class with their friends and relatives attended the Senior Banquet met at Younkers for the Class Banquet.
This past month letters have been sent from this office to each of the local representatives of the ten organizations making up the Council. I am sure that there will be no delay in getting all arrangements made in plenty of time. Each frat or sorority is planning a banquet and program for a part of their reunion and of course the regular business meeting held at some convenient time and place during convention week. Tuesday night is the official night for the social organizations.

The Atlas Club is probably making more extensive plans than any other fraternity due to this year being its 40th birthday. Dr. Charles Ross is in charge locally and the officers of the Club, H. V. Halladay and Dr. C. R. Starks, have the plans well in hand. Dr. Ross reports contacts have already been made and the reunion will be held in the Gibson Hotel Roof Garden. This hotel is one block from the Netherlands Plaza and is semi-official since the Scientific Exhibit and some other features of the convention will be housed there. The program is not complete at this time but will be highly entertaining that one should miss.

Dr. Walter Bailey of the Sigma Sigma Phi, reports that the annual meeting will be held Monday evening at the Netherlands Plaza. This will not intercede with any of the other meetings planned for that night and will be over in plenty of time for any official entertainment on the program.

Dr. E. E. Ruby, in charge for the Alpha Tau Sigma, writes that he is getting things lined up and the boys will have a good feed and entertainment that no one should miss.

Dr. John W. Hayes, acting for the Phi Sigma Alpha, reports progress but plans are not complete at the present.

Dr. P. R. Jones of these Psi has reserved the Cincinnati Club at the present.

The membership of the Interfraternity Council this semester is composed of Jerry O'Berski (Phi Sigma Alpha), president, Beryl Freeman (Delta Omega), secretary-treasurer, Armand Frank (Beta Chapter), P. N. Munroe (Atlas), Bill Daniels (Iota Tau Sigma), and Gordon Foreman (Phi Sigma Gamma).

Smokers for the new freshmen were held on Tuesday evening, February 2, by the Atlas Club and February 5, by the Phi Sigma Gamma, at their respective houses, and on Thursday evening, February 9, by Iota Tau Sigma at Boyce's Up-Town. Results of pledges are not available at this time.

Dr. Halladay was host to the members of the Council at 6 o'clock dinner at his home on Kingman Boulevard, Friday, February 11, after which bids were extended to the prospective pledges. -B. P.

THE LOG BOOK
N. O. I. C.

This past month letters have been sent from this office to each of the local representatives of "Hobbies." On January 26 she addressed the Junior Chamber of Commerce Women on the subject of "Syphilis."

Dr. Walter Bailey of the Sigma Sigma Phi, reports that the annual meeting will be held Monday evening at the Netherlands Plaza. This will not interfere with any of the other meetings planned for that night and will be over in plenty of time for any official entertainment on the program.

Dr. E. E. Ruby, in charge of the Alpha Tau Sigma, writes that he is getting things lined up and the boys will have a good feed and entertainment that no one should miss.

Dr. John W. Hayes, acting for the Phi Sigma Alpha, reports progress but plans are not complete at the present.

Dr. P. R. Jones of these Psi has reserved the Cincinnati Club for the fraternity's Reunion on the night of July 12. The program will be completed shortly.

By the first of April we will have most of these fraternities and sororities in their new officers and keeping each days assignments taken care of as prescribed by the various instructions. This semester promises to be one that will go down in history.

The senior banquet held at Boyce's Uptown was well attended and everything moved smoothly under the capable direction of Dr. H. V. Halladay.

High lights of the banquet included the presentation of a plaque to the retiring Noble Skull and Crossed, Leslie, by the present Noble Skull, A. R. Schiffer. Another outstanding feature was the delivery of the address by Dr. Templeton and O'Berski; Trum- per, LaRogue and Johnson; Trombwood, Russell and Calvird; Bass, Hutson and Drums, Ger- lich.

To Chicago

Dr. Arthur D. Becker, president of Des Moines, filled three addresses in Chicago: "The role of osteopathic bands for many years, shaves the baton over the bunch vigorously and sometimes almost peevishly.

Piano, McQhill: Violins, Simpson, Kelsey and Morey; Banjo, Ferrandino, Young; Tubas, Templeton and O'Berski; Trum- per, LaRogue and Johnson; Trombwood, Russell and Calvird; Bass, Hutson and Drums, Ger- lich.

Dr. Mary E. Golden—of Des Moines filled three important speaking dates during January. On January 29, she talked to the Washington Grade school and on the 26th to the P. T. A. of West Des Moines. She was the High on the subject of "Hobbies."

On January 26 she addressed the Junior Chamber of Commerce Women on the subject of "Syphillis."
It's Too Bad

I sat in my parked car the other day watching five young men who were sitting on the back porch of a beer joint near the college. They were occupied in the important business of displaying their talents in smoking. None were well dressed, fact, they were unkempt in appearance but they were certainly adept at the art of manipulating smoke. One seemed to have all the tricks and glazed in his prowess. A drag from the cigarette, a deep inhalation, a fairly long hold with a smile in the mouth and a little coal smoke (Molasses a little coal smoke too) and then the pyrotechnics. He could blow smoke rings that looked like small auto tires or, as we sometimes see in the ads, a mile or so of them coming down through getting smaller in the distance. He could blow smoke out of both nostrils and his mouth at the same time, he could create a little brick of tough smoke, his lips together in the midline and then blowing from both the mouth and nose so that count ‘em-streams of smoke spurted forth much like the fabled dragons of old.

Another could do the extremely difficult trick of reversing his cigarette in his mouth and blowing a veritable bonfire of smoke and sparks from his lips and, still seeming to have all the tricks so far he seemed to be letting the smoke slowly ooze from the mouth to be taken in by the nostril and then to the nare, disappear, later to come to the surface via the oral opening.

I do not know why I should moralize on this remarkable display of talent. I am a smoker myself but I do not work at it or at least I do not think I do. Perhaps I can only say to you that if a young man or woman can take the time to study out these tricks and do as well as this group then I would say that the art and industry applied to something really useful would produce some worthwhile results. Science can concentrate on anything useful for even a little while while each day he or she can within a reasonable time do much that is better than someone who is blowing smoke rings. Even several years in the future I cannot picture these young fellows filling any responsible positions. Having seen their expertise at smoking I can only think of them as virtuosos in a field that is pretty well crowded and one that is not likely to produce much investigation of any kind. It is too bad that we cannot rate these young men by this talent for they would stand high.

I must loaf in the halls of the college some day and make a few observations about smoking. Statistics are popular and I shall study it with those who use their ability along constructive lines other than making smoke rings. I know I shall be reminded of this smoker but I hope that the other things I plan to do will be primarily in the thots of others when my name is mentioned.

R. H.

Assemblies

The first assembly of the new class is planned for a display of the faculty. With the usual hurry and with so many things to do I do not think I can have any sympathy. There is no indication of a happy medium or perhaps a little leaning to the more awkward and selfconscious way and I think it will never be noticed. Smoking is a very minor thing when we associate with those who use this ability along constructive lines other than making smoke rings. I know I shall be reminded of this smoker but I hope that the other things I plan to do will be primarily in the thots of others when my name is mentioned.

Assemblies

Our DEPARTMENT OF CHEMISTRY

(Continued from Page 1)

chemical diagnostic laboratory, steps into the role of a detective and, by the use of known formulae eliminates or proves the presence of pathological changes in the body fluids and other tissues.

Dr. G. E. Fisher is at the head of this department and is ably assisted by Dr. I. Gordon. The course begins with the study of Inorganic Chemistry. The class is followed by the more complicated subject of Organic Chemistry and to complete the course and make it apply to the functions of the body the third section is given under Pathological Chemistry. Two hundred seventy hours are spent in didactic and demonstrative class work with two hundred six hours of experimental work in the laboratory. As the student progresses from the more simple reactions to more complicated ones the laboratory keeps pace with demonstrations that enable the student to see what chemical changes and reactions really mean.

The chemistry subject that is not completely understood by our best trained chemists and new ideas and better and more accurate methods of diagnosis are constantly being perfected. Those associated with this department must keep pace with the recognized modern methods of diagnosis.

New equipment, finer graduation and more detail in different methods keep prodding the teacher in this department. As we engineers have found a fertile field in applying their intricate knowledge to body functions so also physicians take advantage of this knowledge in a practical way in tracing the causes and effects of disease. Our plans to combat these hidden factors to find out how we doctors can be effective in this new role if we are familiar with our modern diagnostic methods.

Freshman B. Awards

Dr. Halladay gives the Freshman B. Class the 00 in more ways than one. At the end of the study of Osteology they are given an examination direct from the skeleton. At this time they are required to turn in their weaknesses and the answers fired at them in quick order, the object of the question being pointed to on the specimen. Any class making over 95 in this test is awarded a key, the significance of which will be discussed in class. There is one disadvantage. These boys have set for themselves a mark that they must keep even at the expense of midnight le-

treality and broken dates. We extend our congratulations and sympathy.

To the introduction of the new class. It is not necessary for us to describe this scene to those who have been a part of it. The usual cheers and boos were heard at the announcement of certain states and this year there are two for us to describe this scene to those returning to the college. Dr. Park, a new member of the faculty, made his first appearance and promised cooperation even with classes not under his tutorage. Dr. Park is a graduate of the school and has been racing in the city for several years. We are indeed glad to welcome him to the faculty group and I am sure the students present will be a part of this new group.

Sigma Sigma Phi will have the planning of the assemblies as usual and have already laid out their programs. The responsibility for these weekly meetings during the Spring semester rests largely on the several organizations and with plenty of early warning we may expect some interesting and instructive programs throughout the entire period.
They Say—

Polk County

The members of the Polk County Osteopathic Association were guests on January 14 of Dr. J. P. Schwartz at the Des Moines General Hospital. This was a meeting that the membership would not be surprised to find that they were not disappointed in any part of the fine program.

Dinner was served at seven and when the group filed into the dining room they were met by their host who was serving. The fish and everything that went with it were presented perfectly and the silence that followed the serving of those present evidenced their relish of the meal.

Dr. Ray McFarland of Wichita, Kansas, a former intern at the Des Moines General Hospital was the main speaker and talked on "Endocarditis." Dr. McFarland’s discourse was exceedingly interesting and instructional. The instructor gave some of the facts he believes are important to be able to identify the disease and knew his subject in every detail.

A general discussion followed and the meeting closed after a short business session. The association is highly appreciative of the contribution of the guest. The papers were written by William L. Daniels of Los Angeles. -Mary E. Golden, D. O.

Senior Affairs

(Continued from Page 1)

Three of the eight members of the graduating class failed to appear but each had excellent excuses. Delayed trains bringing relatives and illness prevented them from attending this affair.

Following a fine meal Dr. Becker took the floor and called upon Drs. Bachman, Halliday, Fisher and Mr. Reves who as president of the class spoke in behalf. The feature to be remembered by those who attend these affairs each year was that the weather was mild. Our usual experience at a Senior banquet is that the temperature is below zero and a storm is hard at work. We hope the fine weather indicates easy sailing for the graduates.

Graduation was held at the college auditorium the evening of January 21 and the weather favored us again. The large group of friends, the excellent music by Mr. Cleveland and the fine address by Dr. Weeris made an ideal combination for the final ceremony that transferred this class from the student body to the alumni. The faculty and class appeared in cap and gown and occupied the seats near front yard.

We hope that Wooden will be back in his old form at an early date and if not able to carry on at the college that he will pay us an occasional visit.

The Log Book

They Say—

Angina Pectoris With Special Reference To Its Mechanical Causes

(Ed. Note—The above subject was given to the Senior students by Dr. C. I. Gordon. The prize winning paper was selected by a committee which included Dr. E. S. Leininger.)

Oserl (1) defines Angina Pectoris as, "A symptom complex characterized by paroxysmal anginal pain, with radiation to the arm, and with vascular changes." This definition is the best I can find, but it can be taken ambiguously that it does not state where the vascular changes occur. I take it, that he means the vascular changes occur in the heart.

In order to discuss the subject properly I will give a resume of the nervous anatomy of the heart which I believe will help clarify the material presented later.

The parasympathetics (2-3) arise from the Vagus. These are the inhibitory fibers and the vaso-constrictors of the coronary artery's arterioles. To the left of the Vagus give off three nerves to the heart; the superior, middle and inferior cardiac branches. These vagus help form the cardiac plexus. The vagus, through the juxtagaanginal ganglion, communicate with the accessory nerve, the cervical ganglion of the glosso-pharyngeal, with the facial nerve and with the sympathetics by means of an ascending filament from the superior cervical ganglion. Through the ganglion nodosum there is communication with the hypoglossal, the superior cervical ganglion of the sympathetic and of the sympathetic to the hypoglossal by the cranial nerves which must be present before the attack, i.e., in the absence of the presence of Angina Pectoris. Hence, hypoxia or hypoglycemia or cardiac fatique naturally suggest themselves. The difficulty with such theories is that it is hard to see how they can be either proved or disproved."

(Continued Next Issue)

Dr. and Mrs. J. P. Schwartz—

and Miss Virginia Campbell, of Des Moines, toured to Florida late in January for a three weeks vacation. Dr. Schwartz reported the trip very unpleasant, as he was constantly having to do with the weather. He stated that he had to come back to his old home in Lodi, Calif., announce the arrival of William Allen, January 24, weight seven and one-half pounds.

Dr. and Mrs. C. M. Parkinson—

of Highmore, S. Dak., announce the arrival of Lawrence Hunter II, November 27, 1937. Weight six pounds.

Hopping of London sends us a card from St. Mortiz. We think he looks better on skis than in that silly hunting habit.

Liberty—

of January 29 issue carried something of interest to you in question No. 11. The answer was the longest in the list.
The Des Moines Still College of Osteopathy presents a full week of
POST GRADUATE REVIEW and CLINIC
MAY 30th to JUNE 4th, Inclusive
available to osteopathic physicians only.

SPECIAL GUEST SPEAKER:
DR. L. D. ANDERSON, Boise, Idaho
Outstanding teacher and demonstrator in osteopathic technic.

NO TUITION CHARGE
Every offering of the entire course directed to the interests and problems of the general practitioner.

The Faculty
Dr. Arthur D. Becker,
President and Cardiologist.
Dr. J. P. Schwartz,
Dean and Surgeon-in-chief.
Dr. R. R. Bachman,
Treasurer and Obstetrician.
Dr. H. V. Halladay,
Trustee and Anatomist.
Dr. H. J. Marshall,
Trustee and Oto-Laryngologist.
Dr. G. E. Fisher,
Trustee and Chemist.
Dr. Mary E. Golden,
Pediatrician.
Dr. L. L. Facto,
Clinician.

Our Department of Pathology
A complete understanding of Pathology is one of the basic factors in the therapeutic plan of any physician. He must be able to picture in his mind the abnormal processes that are taking place within the body. He must be able to devise a plan that will stop the progress of this lesion and return the injured tissue to its normal use again. He must have a knowledge of the serious effects not only at the seat of the primary pathology but also extending into the surrounding organs and by the blood or lymph streams into more remote parts of the body. The physician must be able to judge the seriousness of the condition and the possible permanent damage after healing takes place. This means that the study of Pathology reaches intimately into, not only the diagnosis of a disease but also influences the prognosis and is a basis for the treatment plan. It is with these important factors in mind that the college has arranged a complete course covering this subject, offering more hours in didactic and laboratory than is required or given in many other colleges. The study of Pathology is another that is a constantly changing picture. Our scientists appreciate the need for a better and clearer understanding of the abnormal processes that invade the body and they are diligently searching for causes and methods of cure. These new facts are incorporated with the course as soon as they have been announced. The osteopath must be alert to proven scientific data and we feel the responsibility of keeping
(Continued on Page 3)

The Faculty
Dr. C. I. Gordon,
Bio-chemist.
Dr. B. L. Cash,
Roentgenologist.
Dr. J. L. Schwartz,
Proctologist.
Dr. O. E. Owen,
Pathologist.
Dr. H. A. Gramey,
Assistant Surgeon.
Dr. E. F. Leininger,
Gynecologist.
Dr. Max Bergau,
Bacteriologist.

FACULTY ASSISTANTS
Paul Kimberly.
Neil Kitchen.
This is a warning. Time is flying rapidly. Some of our members have not reported even the license.

Reports indicate that there will be a large attendance at the meeting this year. Dr. Corrodi and others are hard at work keeping their records straight and making every effort to give you what you want. The regular plan for ticket sales and information will be carried out as has been done for the last several conventions. Make your plans now, and attend your fraternity or sorority meeting and make it a record.

ATLAS CLUB

Fifteen men turned out for the first basketball practice of the season, which furnished plenty of Cliff Millard's Fighting Forces and generally lowers body resistance. Then, the bacteria always present in the throat get to work.

Dr. Alphonse Raymond Dochez and his colleagues also reasoned that if a virus did get in the throat of a patient, it would cause only mild colds and that it would not cause severe ones because the body would be prepared to kill off the virus. They found the solution to colds tells us that the virus gets in the nose and throat passages. It inflames tissues, occludes the blood vessels fights ing forces and generally lowers body resistance. Therefore, the bacteria always present in the throat get to work.

Miss "Dolly" Burkholder, Surgical Nurse, of the Des Moines General Hospital.

With Spring in the air, the young man's fancies not only grow, but so do their Bills. With Winter, however, some interest is also shown in Bowling. We have a team composed of John Hagy, Bud Heidenman, Erwin Iverson, Howard Johnstone, Otto Drews, and P. N. Munroe. We were successful in winning our first game, and we hope our "luck" holds out.

Dr. and Mrs. Becker were the Honor Guests of the Club, at a Doty Tea Room, Wednesday, March 6th, at the Doty Tea Room.

The Log Book

Your Order, Doctor

Last year at our Post Graduate and Review Week we had the privilege of dissecting on the abdominal wall and the foot. This year the department of Anatomy in the magazine offer something in the way of special demonstrations on the cadaver. What you would like to see? Our graduates may not be the best in what we should have prepared ahead so we are asking those of you who will attend the course to write immediately and let us know what you would like to see displayed. Our Review Week is for you. It is possible we want to have those things ready that you would like to see. It takes time to do the kind of work that is being done. We must bring out the special interest of those who have been here. We must cover these selected bits that may be requested but with plenty of time to get ready, anything within reason may be prepared. We have a corps of trained dissecters ready to go to work on a subject and we anxiously await your orders.

DR. H. V. Halladay, Professor of Anatomy.

Osteopathy Without Limitation

Advance

Des Moines Still College of Osteopathy is interested in having a part in the postgraduate work. This move is a progressive one and is a wholesome indicator of osteopathic educational progress.

We do not believe, however, in resting on our laurels. It is hardly safe nowadays to stop long enough to even indulge in a little self-satisfaction. We believe in using the gains made as platforms for future efforts along lines of improvement.

It is true that we have many reasons to feel happy and encouraged with the accomplishments thus far in our program of development. The good work and the loyal attitude of the student body is most pleasing. The fine cooperation of our entire faculty group is a matter for sincere appreciation. The many letters received from previous students in our alumni group have been a source of real joy. It certainly warms the whole day when our enthusiastic friends in practice write in and say to us, "We are hearing good reports over here about the work that is being done here at the college, and I want to congratulate you."

We are particularly interested in the fact that many prospective students for next fall's class are already writing to us and some have already matriculated. We sense your interest. We think we appreciate fully the problems associated with the advance in entrance requirements.

We are planning to designate our September class as the "Anniversary Class" in honor of the 40th Anniversary of Des Moines Still College of Osteopathy. We want our many loyal friends and well-wishers to have representatives in that class. The fact that we have grown this past year in total enrollment does not lure us into a false sense of complacency. Send us the names of qualified prospective students for the September class and let us help you obtain them in starting their osteopathic education.

Arthur D. Becker, D. O.

Dr. and Mrs. J. L. Schwartz—returned recently from a winter vacation trip to Guatemala. A visit to relatives was made, as well as a visit to what we heard the relatives figured very little in the delightful events of the months trip. New Orleans, the boat trip across the Gulf, Guatemala harbor, the city, a trip into the inland, fishing, sightseeing, manufacturing, baskets, pottery and everything that goes to make an ideal vacation trip into a new land were really the things that gave the time. A month is too little to get a good start in such a fascinating land. The travelers returned loaded with gifts and treasured souvenirs. And both had acquired a coat of tan that was the envy of all the folks we stay-at-homers—WE guatacactus from Guatemala.

Dr. Emanuel Jacobson—of Philadelphia sent us a card from Rio De Janeiro. We envy him this fine Winter vacation trip. Hope you arrived back home safely Jake.

Dr. L. D. Anderson

We are fortunate in being able to add Dr. Anderson of Boise, Idaho, to our Post Graduate Faculty for this year. Among the various plans for this intensive week of Post Graduate Review Week are clinics illustrating osteopathic diagnosis and osteopathic technique a major part of the program. Dr. Anderson has a well earned reputation as a teacher and demonstrator of these most important subjects.

Our department of pathology is interested in having a part in the postgraduate work. This move is a progressive one and is a wholesome indicator of osteopathic educational progress.

For purposes of study the course is divided into three semesters—ninety hours each. The student is required to take the study of General Pathology including the degenerations, circulatory disturbances, inflammation and repair, tumors and the pathology of the osteopathic lesion follow under this general heading. The special pathogenes of the organs given during the second semester. This, in connection with the several tracts of the body includes a study of the effect of the osteopathic lesion on structure and function.

The third semester covers a more exhaustive study of the vital organs and the ductless gland system together with a review of the entire course.

The department correlated with the various divisions, a complete laboratory schedule is maintained which takes the student thereby the preparation and definition of the tissues. The laboratory space and equipment in the way of slides and microscopes and a special preparation laboratory for new material that is constantly coming in. An important feature of the laboratory is the microscope. Here the student may study the many specimens prepared and mounted in glass jars and each with a case history explaining the change from the normal. The specimens in the museum together with the microscopic laboratory bring vividly to the student both the gross and microscopic phases of the abnormalities that the human body may suffer.

Drs. Owen and Gordon are responsible for the lecture and laboratory work in anatomy and we are particularly interested in the newer facts related to the Department of Pathology.

Assemblies

For the past month, with the aid of the Sigma Sigma Phi, the medical men have run on schedule with the usual variety and interest. A movie from the collection of Dr. Halladay, involving a trip on the thru the East, proved of great historical value. Students who have not been to any historical spots of interest coming from Washington up into Maine enjoyed the opportunity via the picture route.

February 18 the student body and visitors attending the Sixth District meeting witnessed a fine surgical film from the lips of Dr. Davis and E. G. Davis.

The Atlas Club sponsored the program of February 25 and provided the assembly with outside talent of note. Mark Gerlach, taking the stand, announced the Drake Quartette, an exceptional musical organization with which the majority of us are acquainted. Dr. Anderson followed with a series of imitations that could not be mistaken. A feature of the program was a prize offered by the French Way Cleaners, this being won by Paul Kimball. The Atlas Club in turn congratulated for securing such high grade entertainment for our program.

March 4 was given over to the Plane Winter vacation trip. Over 200 inches of snow fell. The plane was operational and the friends visited the courts and saw the drivers. The plane was operational and the friends visited the courts and saw the drivers. The plane was operational and the friends visited the courts and saw the drivers. The plane was operational and the friends visited the courts and saw the drivers. The plane was operational and the friends visited the courts and saw the drivers.

April 13 and 14 was a beautiful day and the Dolphin Club was able to programme the national meeting. The day was a perfect day and the Dolphin Club was able to programme the national meeting.

To Chicago

Dr. Arthur D. Becker, president of the college, attended a committee meeting of the Associated Colleges in Chicago on February 26th, having to do with the consideration of a curricular survey.

The O. A. C. presented us a report of the publicity thrust out the country following Dr. Halladay's Ohio trip. Over 200 inches were printed in 21 states extending across the country. About half of this space was in the state of Ohio, and this was the favor in which osteopathy is held in this section. To Cincinnati,

Dr. Charlie Gahan—of Kirksville and well known thruout the profession died February 26. We do not have the details. Skipper was a friend to all and will be missed by many. Since his graduation he has been proprietor of the A. S. O. Book Store.

Dr. J. P. Schwartz—of the hospital and college, is billed to appear at the Oklahoma State Osteopathic Convention April 15 and 16.

Prof. in Ethics: "I will lecture today on love. How many of you have read the twenty-fifth chapter?"

Nearly all raised their hands. Prof. "That’s fine. You’re the very group to whom I wish to speak. There is no twenty-fifth chapter."
THE LOG BOOK

State Tournaments

March 3, 4, 5 will be remembered by some of the Senior girls as exciting days. The finals in the Iowa State Girls Basketball Association were played at the Drake Field House and five of our girls took part, not in the capacity of players but physicians. Ruth Paul, Bertha MoeB- lior, Louise Michael, Velma Geh- man and Beryl Freeman were on hand during the tournament to administer any treatment necessary. The girls report very little to do in the way of first aid or serious injury, but they enjoyed the meet and the hospitality of Mrs. Johnson, the official hostess. Sixteen girls teams from all the state areas competed these three days and when the final shot was fired the team from West Bend stood out in front. Lenox had a great scoring trio but were kept at bay by some clever work by the West Bend centers. Centerville, coached by the brother of an osteopath, did not show the strength usually brought to the tournament. The next year, as usual, we expect to see the oder of players but physiology in Des Moines.

Angina Pectoris With Special Reference To Its Mechanicall Causes

I agree with Cabot from a medical point of view, I believe he would have found the cause had he had the Osteopathic concept with which to work. In Osler’s Practice and Principles of Medicine there is the statement that there is no definite lesion which can be associated entirely or regarded as responsible. I intend to disregard in this paper such diseases of the heart itself which may bring on Anginal attacks. I intend to remain on the subject in relation to the mechanical causes. Castillo says that lesions from the first cervical and downward through the sixth vertebrals may have influence on heart action.

Downing (7) states, “A parietal or costal neuralgia, when caused by lesion involvement of the upper six ribs, is not uncommonly the major factor in pseudo Angina Pectoris. Many cases of true angina are accompanied by lesions of the thoracic vertebrae and ribs, and in several cases where the clinical diagnosis has been confused by positive X-ray and electro-cardiographic findings, the author has found osteopathic corrective manipulation to give greater relief from pain and quicker release from coronary vascular spasm, than could be seemingly accomplished by medication. Osteopathic procedure has a very definite place in the treatment of these conditions, both in the symptomatic phase and for the probable prolongation of life. Rib and vertebral lesions should never be overlooked in any of the so-called nervous affections of the heart, nor should they be under-emphasized as a trophiic consideration, particularly in the case of myocardial impairment, since they directly or indirectly affect the nerve feed to the heart.

The nervous effects of a rib lesion are complicated through disturbed structural relations. It may involve both anterior and posterior primary divisions and their ramifications. The intercostal nerves are specifically involved. The ganglionic cord passes in close proximity to the heads of the ribs and is markedly endangered. The rami communicantes, spinal ganglia, recurrent meningeal and other sympathetic filaments may be likewise affected.

The nervous effects of the lesion may definitely entail inneraction to vertebrae, ligaments, cord, meninges and visera.

The intercostal blood vessels supply the immediately muscles and branch passes through the intervertebral canal to supply, in part, the cord. The lesion may lead to congestion of both spinal muscles and cord.

SIR James Mackenzie partly explains Angina thusly, “It requires no effort of imagination to recognize that when the heart’s power becomes limited, the first sign of the limitation will appear at those periods when the heart is called upon to exercise its full powers. On effort, the muscles of the body require a greatly increased supply of blood, a blood purified of waste products. If the blood is not purified, then the organs of the body will not be able to exercise their function efficiently. The limitation is brought to the knowledge of the individual by a sensation of distress which occurs in the performance of some duty he was want to do in comfort.”

From the above facts and statements I wish to advance the following deductions as the causes in many cases of angina Pectoris.

FRATERNITY NOTES

O. N. I. C.

On to Cincinnati. The committee are
perfectly ready and are up right to the
scratch at this date. Follow thru the list below and locate
yourself now. More information
will come later but not much more
is needed. A few little errors
that caused us some worry have
been straightened out and here is the result hot from the
office of Dr. Corrodi who is the
last word in these arrangements.
Acacia Club—July 12, 7:00 p.m.
Room P, Netherland Plaza.
Alpha Tau Sigma—July 12, 7:00 p.m.
Rooms A & B Gibson
Hotel.
Atlas Club—July 12, 7:00 p.m.
Roof Garden, Gibson Hotel.
Axis Club—July 12, 7:00 p.m.
Room E, 4th Floor Netherland
Plaza.
Delta Omega—July 12, 7:00 p.m.
Parlor H, Netherland Plaza.
Iota Tau Sigma—July 12, 7:00 p.m.
Parlors A, B & C, Netherland Plaza.
Psi Sigma Alpha—July 12, 12 noon.
Rooms A & B Mezzanine
Hotel Gibson.
Phi Sigma Gamma—July 12, 7:00 p.m.
Italian Room, Gibson Hotel.
Sigma Phi—the—July 11, 6:30 p.m.
Rooms A & B Netherland Plaza.
Theta Psi—July 12, 7:30 p.m.
White Villa Country Club
across the river in Kentucky.
Busses will call for members.

Special
Acacia members note change in
room from announcement last
month.
 Psi Sigma Alpha note your noon luncheon.
Sigmu Sigma Phi members
note your early time on Monday
evening.
Theta Psi members will have
detail about the trip to your
dinner and reunion in the
next issue.
National Osteopathic Inter-
fraternity Council membership
will be notified by letter but your
luncheon will be at the Nether-
land Plaza Room C, Monday
noon, July 11.

There will be more informa-
tion for you next month. Some
of the prices have not been fixed
but we have the dope on ent-
tertainment and whatever the price
you will be getting a fine meal
and excellent entertainment. It
looks to us like the organizations are
being well represented.
H. V. Halladay

LAMDA OMIOMIC GAMMA

April second marked the happy culmination of the efforts of
a fine group of Jewish boys in establishing in Des Moines a
chapter of the L. O. O. M. national oto-ophthalmic fraternity. Formal
Installation of the Skull Chapter took place beginning at 8:30
p.m. in the Kirkwood Hotel
this was followed by a banquet. The group in Des Moines was
pressed by the presence of Dr. David J. Bachrach of New
York City, one of the founders of L. O. O. M. in 1924, who made the
trip especially to visit this chapter and get the boys started
right.

William Weiss, the newly elected president, presided over the
chapter officiated at the banquet and called upon the guests for
short talks. Responses were
made by Dr. Arthur D. Becker,
president of the college, Dr. D. J. Bachrach, installing officer,
and William Weiss, chaplain, as
officer. Elected members are
Paul Green, Samuel Gross, Les-
lie Andrews, Edward D. Weil,
Archer, Arrows and Gerald
Zafron. Dr. Jack Berck
of Des Moines was also initiated
and will act as District Advisor.

ATLAS CLUB

Monday night, March 14, the club had dinner at the
Grill, after the dinner Dr. East-
aman gave a very instructive lecture
on "Occll Infections."
The Atlas Club wishes to
extend its hearty congratulations to Lambda Omicron Gamma
which has just recently established
itself in the center of interest being the
school is making and we wish to take this means of extending to the LOG our best wishes.
The pledges are breathing a little easier now that "Hell Week" is out of the way. With
a little encouragement from the
active members, the pledges did a very nice job cleaning the house from
dorm to garage so that a very practical and enjoyable week was spent by the club. The week
ended by a steak fry Saturday, 26 given in honor of the new pledges. Formal Initiation
will take place April 10.

The bowling season was closed last Friday. Our team won in
the final championship of the sig-
ma Gamma and thereby won poss-
session of the Sigma Gamma Pri
Bowlig trophy for the coming year.

Dr. Donald Evans and Kenny
Bates of Detroit spent the week-
end in Des Moines on business.
They were glad to see us again.
Don is interning at the Detroit Osteopathic Hospital.

A dinner was held by the club at the Doty Tea Room, April 3.
Guests included Dr. H. V. Halla-
day, his son, Morrey and Mrs.
Berger of Franklin, Ohio, who
spent the week-end in Des
Moines with his son Robert.

Phi Sigma Gamma wishes to
congratulate Brothers Hardy and
Bahlung on being pledged to Phi
Sigma Alpha and Jack Miller
being pledged to Sigma Sig-
ma Phi.

We wish to thank our frater-
nity brother, Dr. C. L. Naylor
of Ravenna, Ohio for his corre-
spondence. Would others Alum-
ni please send their addresses
and names to the secretary at 2141 Grand
Ave., Des Moines?

Further congratulations to the
Atlas Club for their bowling
ability.

The results were as follows for
the entire tournament:

The last banquet of the Fra-
ternity was held at the Uptown
Boyce's Cafe with Dr. R. E.
Bachrach the principle speaker of the evening. As his foundation stones Dr. Bachrach
chose the letters S. S., Science,
Syster, and Service, and built his entire speech around these key
pillars.

The speech was most interest-
ing to those of us who are
making the transition from the
freshman class and especially
to the senior brothers, who
are soon to graduate.

Because of senior qualifying
conditions, the regular schedule Fraternity meeting has been postponed till April 12th at
which time general election of
officers will be held.

J. P. G.

The monthly meeting of the
Sorority was held at the apartment
of Rebecca Richardson and
Dorothy Hollem, Wednesday even-
ing, April 6. Dr. Genevieve
Baudin spoke on "Gynecology
and Obstetrics, cases of which
will be found in the College
library.

The Sorority has renewed its subscriber for five years to the
American Journal of Gynecology and Obstetrics, which will be
enjoyed by those present.

Dr. Evelyn Ketman, class of
January, 1938, has opened her office with Dr. Joe Dykstra in
the Shops Building. Alumni are requested to send their
addresses to Rebecca Rich-
son, Secretary.

B. F.

Local Council

Plans are progressing for the
first Interfraternity Banquet
which will be held at Wayside
Inn, April 27. Approximately
graduating seniors who are members of any
of the seven fraternities are
honored guests, reservations
which will be made by each fraternity
through its Council representa-
tive. Details will be announced
later.

The Council welcomes Alvin
Yarrows as a new member, rep-
resenting the newly organized
fraternity.

B. F.

THE Log BOok
Every year, about this season, Dr. Wm. Osler was an enthusiastic advocate of what he pleased to call “brain dusting.” It refers to a mental house cleaning and refurbishing. It was his idea that it should come at more or less regular intervals. Mental furnishings need to be turned over and re-evaluated. New ideas and new discoveries must be incorporated. Certain things may need to be discarded.

We are inviting you to join us in our Week of Graduate Review and Clincie. We will be glad to have you here. We believe if you come, you will be glad. Get in the habit of an annual “brain dusting.”

Arthur D. Becker, D. O.

Osteopathy Without Limitation

“The Log Book

FOR YOUR SAFETY

You have just gone thru a hard Winter season of practice. There are three things that you must plan for: three months. You are entitled to three periods of diversion. Two of these periods should be the motor- man’s holiday but you want them and need them. The other is your vacation.

The first time on your Summer program is attendance at our Fortieth Anniversary Post Graduate Clinic and Clinic Week so make a point of checking your calendar, May 30th to June 4th and plan to be here.

The second is your trip to Cincinnati which will be with your family and will be partly a vacation and partly intensive scientific work. Mark down July 11th to 15th for this.

Third you will take some time off and get into the old clothes and old routine. It is not for you to guess at what you will do with the last minute that you have, but for the next few weeks later in the season and come back from this rest ready to face the next two months.

Let’s get back to our week with you for a moment. It is only one week but a fast one and one that has much of interest for every student. From the many letters of fine comment we received last year we have selected the subjects that have been the most popular. Look over the daily program on the front page and check off the ones you want to hear and we will bet there will be very few blanks on the page.

Have you looked at the calendar to see just how far in the future this week comes? Look ahead and note that it is only six weeks from this that you will probably get this Log Book.

On Tuesday, March 22 we were honored by having with us Dr. J. E. Rogers, former president of the American Osteopathic Association and Inspector of the colleges. After a strenuous period of inspection he felt it was right to give the good doctor a good talk in Des Moines and talk to the student body.

Dr. Rogers is a graduate of our college, and when he comes to Des Moines he owes us that much real personal attention and we were happy to hear him talk on the theme of “Conquest.” The attention given this talk was evidence of the interest of the student body and we again thank President T. Still for the inspiration he left with us.

A double feature on Friday March 5th made the assembly men of considerable note. The Sigma Sigma Phi had already planned the assembly but with the opportunity of seeing Dr. Becker they managed to split the time between the two features. Entertainment was provided from the American Institute of Business in the form of a fine quartette and a young lady accordionist.

These numbers until the show had to be stopped instead of going on. We hope at some future date we can have our groupings and have them all together and allow them more time. The film presented by Sigma Sigma Phi and Phi Delta was thru the kindness of Dr. Ernest Bashor was unique. The rare case discovered by him and his operation on a patient with pathology was something to be seen only once in an age. The photography was excellent and being in natural colors made it much more impressive and realistic. A great debt of gratitude is owed to Dr. Bashor for bringing the unusual case and giving us the privilege of practically being present at the operation.

April first proved somewhat of a disappointment to Dr. Omega had in all sincerity planned a speaker for the occasion. The speaker, a legislative body of the state, found at the last minute that he had to meet with a committee and called to extend his regrets. With this short notice the band put on a rehearsal and we had a lot of fun anyway. Virg resurrected an old band march and with the piano and banjo faking it thru with gusto and an applause that probably for an encore soon. “Whistle While You Work’ and ‘Ten Little Girls’ went over with assistance of the accordion Trioro. Dr. Becker added to the joy of the occasion by announcing the Easter Vacation dates and the Haystack Picnic. No one left the assembly in a bad humor. For all of the hard work done on the job and as usual adding to the hilarity with an occasional blue note.

DR. AND MRS. DAVID MECKON

of Battle Creek, Mich. are the proud parents of a fine baby girl born recently. She has been named Mary Ellen.

6:30—Banquet, Dr. J. P. Schwartz, Toastmaster.

Boys State Basketball

The recent State Basketball Tournament, which furnished much work and considerable emergency experience for several of the Senior boys. Those who were assigned to this work carried out their part of the program perfectly and they are to be complimented on the fine service they gave in every respect. They were on the job and proved their efficiency by taking care of some injuries that if neglected would have proved serious and given the opposing teams an advantage.

Many cases of Charlie Horse were treated. This is the common injury and to be expected especially since this year the play is much faster and more exhausting. Floor burns, bad sprains, infected fingers, blisters and several knee and ankle sprains were frequent. Headaches, minor infections and disturbances were on the list. One of the boys on the championship team developed a rash and by judgment treatment he was able to play when most needed and aided materially in winning the state championship for his team. A fine piece of work and a very spectacular one was that of Pete Simpich during the last of play when he went on the floor and worked out a bad cramp in the star player’s leg. He enabled us to go on and continue the game. Our Seniors were complimented highly by the coaches and others we meet and we are proud of their fine record this year.

The clinical experience is only a small part of the actual contact—with—cases plan in the education of our student body. The fact that these Seniors were able to act in the capacity of physianes proves the efficiency of our clinical methods of instruction didactic and practical. Our students learn by contact.

Polk County

Polk County Osteopathic Association held its March meeting Friday, the 11th at Hotel Chamberlain at 6:30 p.m.

Dr. Hannan of Perry was a guest of the evening. The highlight of the evening was Dr. James Sharon, Director of Iowa for the control of smallpox disease, Dr. Sharon outlined the diagnosis and treatment of these diseases and asked for the cooperation of the association in their control and eventual eradication.

Polk County Association passed resolution assuring Dr. Sharon of its support in this work.

Mareota was announced that Dr. R. Tinley, Pediatrician of Philadelphia, Penn., would be guest at the April meeting.

J. L. Berck, D. O., Sec'y.

Students Activities

At a meeting of the committee held Friday, April 1, it was reported that arrangements had been completed for the spring dance and that written notice of same shall be given in early April edition of THE LOG.

The dance will be held at the PLA-LAN ballroom—corner of 7th and Grand—on the night of Friday, April 22nd. Several door prizes will be awarded. The strains of melodies to be heard will be rendered by that “incomparable student stheblast,” Carl Ellis and his orchestra. Students ten that you should not exclude yourself from this entertainment. Free to all students.

Iowa Osteopathic Women’s Auxiliary

Applications for Membership in The Iowa State Osteopathic Physicians & Surgeons, Inc. Dr. Charles Wyman, 1444 Thompson Ave., Des Moines; Dr. U. S. Parish, Storm Lake; Dr. John Agnew, 1500 Washington Ave., Des Moines.

X-Ray films, brought out some exceedingly important points in diagnosis.

With the semester coming to a close and the time getting short Dr. Becker took advantage of the opportunity to admit the faculty that there are many things to be done yet before the close of another successful year at the college.

Three Queens

Dr. P. M. Crawford (DMSCO ’32) of Parma, Mo., beyond the unique experience of delivering triplets February 21 and 22. Two of the girls were born before midnight and the other after, which right now brings up the question of how the birthdays will be celebrated. Dr. Crawford reports the total weight 18 1/2 pounds and adds the good news that the mother and babies are all in perfect condition. We hope Marion looked carefully in all the corners so as not to miss a couple. We congratulate Dr. Crawford and hope he will be able to report a little increase each year.

Appointments

Put the following important dates where you can see them and take advantage of all that you can possibly mark on your calendar.

Easter vacation—April 15, 16, 17, 18.

College dance—April 22.
College picnic—May 5.
State Association at Des Moines—May 3, 4, 5.
Graduation—May 27.
Review and Post Graduate Week—May 30 to June 4.
A. O. A. Convention at Cincinnati—July 11 to 15.
Our Seniors

We introduce to you the members of the graduating class of May, 1938. The classes at our college are not large. This means that each member of this class has had the advantage of a great deal of real personal contact with the teaching staff. They have had more patients than they could take care of and they have had actual experience with a great variety of diseases. We are proud to send them out into the field of practice for we know they are prepared to meet patients and take care of them the osteopathic way. At this time the grades are not all in for the semester has not quite ended but we predict that this class will show an average above par. One or two may not be called to the platform for their diplomas. If this happens the proverbial slip registered. May we present:

Garth Anderson who will take Iowa and New Mexico state boards and will locate in one of these states.

Clive Ayers will take the Iowa board.

George Boston will take Iowa and Oklahoma boards.

Eldon Corey will take the Michigan board.

William Daniels will take the Minnesota board.

Robert Dawe will take the Michigan board.

Arnul Frank will take the Texas board and intern at the McAllister Hospital in Houston.

Marcus Gerlach will take Iowa and Michigan boards and expects to intern.

F. M. GeMeiner will take the Iowa board.

L. G. Heckathorn will take Minnesota and West Virginia boards.

Edward Hensel will take the Michigan board.

H. Heldeman will take the Iowa board.

Arthur Haight will take the Michigan board and intern at the Detroit Osteopathic Hospital.

Charles Hougham will take the Iowa and Colorado boards and will intern at the Rocky Mountain Hospital.

Joseph Hull will take the Iowa board.

Robert Irwin will take the Minnesota board.

Neal Johnson will take the Michigan board.

Leslie Joseph will take the Michigan board.

Pat Kelsey will take the Iowa board.

Henry Leslie will take the Michigan board.

(Continued on Page Four)

Dinner and Dance

History was really made at Still College on April 22. For the first time in our image seven organizations under the leadership of the local Interfraternity Council drove five miles to the Wayside Inn and enjoyed, as briefly, a fine chicken dinner at their own individual expense. One hundred sixty-one students sat down together at 6:30 and had an excellent dinner and thoroughly enjoyed being together. Jerry Oberkert, president of the local Council presided and agreed upon, Becker, Halladay and Owen of the faculty. Responses were also made by Velma Gehman of Delta Omega, Bill Weiss of Lambda Omicron Gamma, Bill Daniels of Iota Tau Sigma, Armin Frank of Sigma Sigma, Gordon Fisher of Phi Sigma Gamma, Brenton Schiffer of Alpha and Neil Kitchen of Phi Sigma Alpha. All expressed the wish that the Interfraternity Dinners be continued and at a time when the program could be extended some. All seemed to enjoy the affair too much to want to leave early which was necessary for another important function was planned for the remainder of the evening. We doubt if there is another college in the country where the organizations get together and sincerely enjoy it. Howard Sporck, who was in charge of the time, place and menu, is to be congratulated.

The same evening was dedicated by the Student Committee as the night of the second All-student Dance. This was held at the Des-lan Ball Room and was dedicated to a dance and an intermission Lindquist brought out about 15 fine prizes and with Dick Simpson holding the hat, Dr. Halladay drew out numbers awarding these trophies to as many lucky students. Leo Sanchez nearly broke a leg hurrying forward for the grand prize, a table radio. The generosity of several of our Des Moines merchants will be remembered and the hard work of the committee is to be commended. We looked for that promised Big Athletic circus something of a like nature to that of the Interfraternity Council but was not found. It will be looked forward to another affair of a like nature to that of the Interfraternity Council.

We like it here at Still College.
THE LOG BOOK

N. O. I. C.

Every member of the National Osteopathic Interfraternity Council is set for the Cincinnati meeting. We are ready right now. All reservations have been made. The menus have been selected. Entertainment has been contracted for. The business meetings have been timed to the program. The prices have been set. All you members in the field have to do now is to step up to the plate at the end of the line in Cincinnati and get your ticket and you will have the best reunion and dinner you ever attended. The Cincinnati committee has worked perfectly and the local representatives have done the job every minute until this was done. In my several years experience with this group of organizations this work has never been done with so little effort and with such willing cooperation. This bunch has me on the spot the whole time for I have nothing to fuss about. It is something. My skin is black and blue where I have been pinching something. My skin is black and blue where I have been pinching something. My skin is black and blue where I have been pinching something. My skin is black and blue where I have been pinching something. My skin is black and blue where I have been pinching something.

My sincere thanks to all of you and we know it can be done because you have done it.

H. V. Halladay.

The close relationship between the organizations of Stoll College, as was shown at the Interfraternity convention last January, is very much appreciated. The Interfraternity Council has received a great amount of enthusiasm for more gatherings of that character. Every fraternity council should be congratulated for connecting the organizations in such a manner. Our fraternity is very much interested in its success. We look forward to the next meeting of this group.

Dr. Halladay deserves much credit for his official capacity as Chairman of the National Osteopathic Interfraternity Council, and he has done much to promote unity and harmony among the various organizations.

Lambda Omicron Gamma extends its sincere thanks to: the Des Moines Still College Interfraternity Council for their pledge of cooperation; the Delta Club for their fine Fraternal congratulations; Drs. Lou and Hi Bungard, P. S. G. and Still College Alumni, of Flint, Michigan Hospital, for their encouraging well wishes; the Astra chapter of L. O. G. located at the California Osteopathic College for their Fraternal greetings.

Ed. S. Kantor was elected to a second term as President of the Council of L. O. G. at the National Convention, held the 24th of April at Philadelphia.

There is a baseball game scheduled for this coming Sunday, L. O. G.'s vs. A. E. P. of D. S.

Monday night, May 9, following the election of officers for the coming term, there will be a stag dinner in honor of Graduating President, Wm. Weiss.

M. N. Greenhouse

At the last meeting of the fraternity the election and installation of the new officers had taken place.

Those elected were: Archon—J. Robertson; Sargeon—A. Ferris; Secretary—H. Pflanz; Exarchase—G. Pease; Philus—K. Fowler; Charon—F. J. W. Weddell.

These men go into office next semester. May they have the best of success.

Our organization wishes you a happy vacation, may we see you all again next semester.

H. C. P.

Lambda Omicron Gamma takes this opportunity to congratulate the Council on the successful outcome of the first Fraternity banquet, held at the Wayside Inn, in honor of graduating seniors. Fifty dollars is under the name in.

Dr. Halladay deserves much credit for his official capacity as Chairman of the National Osteopathic Interfraternity Council, and he has done much to promote unity and harmony among the various organizations.

Every fraternity council should be congratulated for connecting the organizations in such a manner. Our fraternity is very much interested in its success. We look forward to the next meeting of this group.

Dr. Halladay deserves much credit for his official capacity as Chairman of the National Osteopathic Interfraternity Council, and he has done much to promote unity and harmony among the various organizations.

Lambda Omicron Gamma extends its sincere thanks to: the Des Moines Still College Interfraternity council for their pledge of cooperation; the Delta Club for their fine Fraternal congratulations; Drs. Lou and Hi Bungard, P. S. G. and Still College Alumni, of Flint, Michigan Hospital, for their encouraging well wishes; the Astra chapter of L. O. G. located at the California Osteopathic College for their Fraternal greetings.

Ed. S. Kantor was elected to a second term as President of the Council of L. O. G. at the National Convention, held the 24th of April at Philadelphia.

There is a baseball game scheduled for this coming Sunday, L. O. G.'s vs. A. E. P. of D. S.

Monday night, May 9, following the election of officers for the coming term, there will be a stag dinner in honor of Graduating President, Wm. Weiss.

M. N. Greenhouse

The chapter held election of officers for the coming term, there will be a stag dinner in honor of Graduating President, Wm. Weiss.

Bota Chapter is bringing to a close one of the most successful periods in the last few years. We deply regret the loss of three of the brothers by graduation, namely: William Daniels, George B. Bostow and Patrick (Kelly) Kelsoy. We feel confident these men will attain a high place in the profession.

At our last regular meeting the following officers were elected for the coming semester: Barnes, president; Scott Fisher, vice-president; Charles Hay, secretary and Robert Lindquist, treasurer.

Tony Sloan was chosen as our official delegate to the National Convention and Robert Lindquist alternate. From advance information all our brothers at the convention will have the opportunity of meeting both these men in the summertime.

The Senior trip to Macon, Missouri was most educational and enjoyable, and our visit with Alpha Chapter in Kirksville was very enlightening—giving us an inside view of some of the activities among the members. Both chapters will have many interesting experiences to remember. We also wish to extend our congratulations to Brother Haligh who has been recently appointed as Internes to the Detroit Osteopathic Hospital.

Plans are under way for the closing weeks of school. The date for the Senior banquet has been set for May the twentieth; to be held at the U. S. D. A. Club. Several out of town alumni are planning to attend. We wonder what that hammering and sawing in the basement? Can you explain Bunge?

We wonder why the "LUGS" are held in such high esteem, even among their rivals from down the stream.

D. L. W.

We wonder if Henerson will start for Pittsburgh—When Hagy will move to Knoxville—What Kewaneer has for Beamer and Ford, that Des Moines hasn't—Where Hewleston and Clapper- ton go to study. What's that hammering and sawing in the basement? Can you explain Bunge?

We wonder why the "LUGS" are held in such high esteem, even among their rivals from down the stream.

D. L. W.

The honorary members of Beta chapter were honored at luncheon given at Younger's Tea Room on Tuesday, April 28 honoring Wm. Tinley, head of the Department of Pediatrics at the Philadelphia College of Osteopathy. The girls of the College, overdo it for this fine citizen.

Anecdotcials of the splendid work cared on in her clinic and of the contributions made to it by her local fr. O. W. N. A. and Auxiliaries.

Members and pledges again enjoyed the hospitality of Anna Sioucou in her home where they met Wednesday evening, May 11 for "pot luck" supper. These famous cinnamon rolls of Anna's were the chief items of interest in the menu. Rememberances were given to the graduating seniors of Anna Sioucou, Ruth Paul, and Bernice Moeller. We extend to these our sincere best wishes for success.

B. F.

At the last meeting the following men were initiated: Messers. Arthur Borchardt, Eldon Blackwood, Kenneth Dirks, Alfred Ferris, Robert McKay, Glenn Walker and Harry Wing. We welcome these new men and hope they will do well in the future as the men who have gone before.

The following men were elected to head the fraternity for the coming year, Neil Kitchner, president; Paul Kimbrell, vice president; Tony Sloan, secretary; Jerry Hooper, treasurer, and Joseph Robertson, corresponding secretary.

The next meeting of the West Virginia Board of Osteopathy will be held in Clarksburg, June 13 and 14, 1938.

Applications to be considered at this meeting should be filed not later than June 1, 1938.

Application blanks may be secured by writing the Secretary, Dr. Guy E. Morris, 542 Empire Bank Building, Clarksburg, W. Va.

DR. H. J. MARSHALL—of the faculty will meet with the West Virginia State Convention May 7.
The Log Book

Assemblies

The Iota Tau Sigma fraternity sponsored the assembly April 8 providing Sargent Jasper of the School of Music. This is the second visit of Mr. Jasper to the college and his talks on safety are always interesting and instructive. His manner of speaking is faultless and methods of elimination was especially interesting. It was of special importance preceding the Easter Vacation because so many accidents occur due to speed and carelessness.

The Easter Vacation beginning Thursday noon, April 14 eliminated an assembly that week but the day was enjoyed by many who took advantage of the four days closure of the college to drive to many scattered points. No serious accidents were reported and all were back at work Tuesday, April 19.

Sigma Sigma Phi, following the custom of collecting under the names of the officers, had a rather informal gathering for part of our assemblies. Presented Rev. Gruhn of the Lutheran church on Friday, April 22, who talked on the horizon working beyond the confines of their own small sphere. Success depends knowledge broadened from the individual to the scope of the universe. We hope to hear from our other denominations as well as the various religious organizations. It looked like the year is about to close with a bang that will scatter our musicians into other fields. Dr. Halladay said we will be looking for some saxophones, a drummer and a couple of pianists. Keep us in mind, brothers.

The Primacy of Osteopathic Concepts

The major premise in osteopathic principles, in osteopathic thinking, and in osteopathic treatment is that disturbance in function and impairment in functional capacity and resources, is predicated upon a loss of structural integrity. That premise is the key note in physiological harmony.

The principle behind many types of osteopathic treatment is that of modifying the symptoms, blowing away the smoke, covering up the effects of or diminishing the sensorium at the point where the patient is no longer aware of the disability. In other words, if too much of this type of treatment has for its objective the blotting out of the evidence, then the well trained and properly qualified osteopathic physician pins his faith on the principle that the logical procedure in cases of disturbed function is to discover the cause (find the lesion) and to remove the cause (normalize lesion pathology).

The pathology associated with the area of osteopathic lesions is not only pernicious tissue function, but even more important, it actually lessens the capacity of tissues, neurologically in segmental relation, to function. The functional capacity of tissues are actually depleted.

In the interesting type of spinal lesions, designated as the visceralogenic or reflex spinal lesions, occurring as a result of visceral irritation or inflammation, there is a good illustration of the effect of lesion pathology in the role of impairing functional resources. These reflex lesions occur and act as an indicator of the tissue pathology that produced them. Correction or normalization of this condition releases the recuperative powers of the involved tissues and restores normal functional capacity and full functional resources.

There are many measures used in treatments that will modify function. Normalization pathology not only will modify function but it enhances the capacity of tissue to function. Normalization of lesion pathology makes available to the patient his own utmost inherent resources.

In osteopathic practice we give primacy to osteopathic principles. Arthur D. Becker, D. O.

The Picnic

Another All-scholar affair was planned and carried out. Thursday, May 5, in the form of a picnic. The Student Committee was a sunny day but they had not consulted the erratic Spring that is upon us and at the last minute had to change their plans from Grandview Park to one of the buildings at the State Fair Grounds. Your busy student did not arrive until nearly everyone was seated and inhaling food but it seemed to be a jovial and comfy gang and it was not quiet enough to hear even a coupling pin drop. If students have nothing but old clothes they must have railed the neighbors attiré for the costumes they exhibited. Nearly everything in the way of fancy picnic outfits was on display. Sumptuous lunches were provided consisting of chicken, a salad, beans, bread and butter and a soft drink. The garbage can was not needed.

Previous to the serving of the lunch the gang enjoyed soft ball, golf and horse shoe pitching and continued with these games and others as soon as they could pry themselves off the benches in the dining room. Reports are not available as to who won the contests but the next day we did see who lost in the contest with Old Mother Nature. Plenty were limping and sitting down easy and the next week at least two more of these Friday afternoon meetings will result in the development of a group of workers that will be cooperation for the point where the patient is no longer aware of the disability. In other words, if too much of this type of treatment has for its objective the blotting out of the evidence, then the well trained and properly qualified osteopathic physician pins his faith on the principle that the logical procedure in cases of disturbed function is to discover the cause (find the lesion) and to remove the cause (normalize lesion pathology).

The pathology associated with the area of osteopathic lesions is not only pernicious tissue function, but even more important, it actually lessens the capacity of tissues, neurologically in segmental relation, to function. The functional capacity of tissues are actually depleted.

In osteopathic practice we give primacy to osteopathic principles. Arthur D. Becker, D. O.

South Dakota

The Osteopathic Board will hold the next examination at Huron June 15 and 16. Write to the secretary, Dr. C. Rebekka Strom at Sioux Falls for information.

Calendar

Class Day—May 20.
Senior Banquet—May 26.
Graduation—May 27.
Post Graduate and Review Week—May 30 to June 4.
A. O. A. Convention at Cincinnati—September 6.
A NEW CLASS MATRICULATES SEPTEMBER 6.

MRS. Z. A. INNES—former member of the faculty is now the proprietor of a book store at 6352 N Maplewood in Chicago.

DR. AND MRS. W. C. RANKIN—of Cadiz, Ohio announce the arrival of Robert Riddle recently.

WE WILL SEE YOU AT DES MOINES—May 30 to June 4 CINCINNATI—July 11 to 15.
I. S. O. P. S.

Iowa osteopathic physicians met in convention at the Savery Hotel, Des Moines, May 3 and 4. We have no official report of this convention but we have heard some comment, on it, from meetings and read an item or two in the Des Moines papers. The program as published was as carried out was good. It offered variety and there were some notable speakers from out-state as well as members of the faculty of the college and state members who are all well qualified and known as authorities. The comments made by Dr. R. C. McCaughan should incite those who did not attend to do something besides sit at home and observe nothing. These are the ones who do most of the kicking. We cannot pay the profession of this state a higher compliment on their unity when so few attend the state meeting.

Dr. W. C. Chappell of Mason City was elected president. Dr. Rolla Hook of Logan was named vice president. Dr. F. A. Gordon of Mason City was re-elected secretary-treasurer and Dr. S. H. Klein of Des Moines was named to the legislative committee for a five year term.

We wish these officers a more constructive year than the one past and we pledge our cooperation in the publication of the news and official announcements of the association, hoping that an editorial board will be selected who will collect news and other items and forward the copy to us on time.

The following applications for membership in the society have been received at the office of the secretary:

A. W. Clow
G. E. DaBois
S. W. Peterson
William C. Reynolds
Noel G. Cartier
J. G. Garton
C. Ira Gordon
H. L. Gordon
Loren Green
Frances Nerby
C. R. Reynolds
M. J. Squibb
N. D. Weir
Woodbine

The following members of the association have made their pledge or contribution to the committee on Public Professional Welfare:

H. L. Gulden
R. F. Williams
E. E. Chappell
B. O. Burton
Grace B. Nazarea
Dallas Center

Dr. Jordan and
Jordon
Davenport
Tao, M. and
devonport
Arthur D. Becker
Della B. Caldwell
Mary E. Golden
James A. Humphrey
Paul H. Klein
John P. Holmes
Carl E. Searnd
John M. and
Holz
Carolyn H. Scott
H. D. Wright

THE LOG BOOK

Our Seniors

Robert Luby will take the Ohio and West Virginia boards.
Burrine Moeller will take the Iowa board.
Jerry O’Berski will take the Michigan board and intern at the Detroit Osteopathic Hospital.
Pun O’Shan will take the Iowa board.
Ruth Paul will take the Iowa board.
Steven Russell will take the Minnesota and Maine boards.
E. O. Sundberg will take Ohio.

Angina Pectoris With Special Reference To It's Mechanical Causes

(Continued From Page One)

The association thanks those who have made a tour of the chapters April and May for their success.

Our Senior Members

R. V. Templeton will take the Iowa board.
William Wels will take the Michigan board.
Donn Lake will take the Iowa board and intern in London, England.

The next few days will see the final ceremonies that unite this group from its Alma Mater. They will finally go thru with the frat and sorority banquets, Class Day, the Senior banquet and at last Graduation. We are losing some excellent students. You in the field will be gaining some real helpers. They will work with you and will help to put Osteopathy on a higher plane. They are able and they will be glad to give expert osteopathic service to all who may call them. We congratulate this class and extend our sincerest wishes for their success.

Bibilography

2. Gray’s Anatomy.
3. Howells Physiology.
6. Cahill, “Facts about the Heart.”

Dr. O. E. Owen—of the faculty and national president of Psi Sigma Alpha made a tour of the chapters April 9 and 10. He reports a fine trip and enjoyed meeting the boys in Kirkville and Kansas City, Robtson, Kitchen and Ferris accompanied Dr. Owen. A short stop was made at Columbia to visit the University of Missouri department of zoology where Dr. Owen studied.

DR. AND MRS. LOWELL MORGAN—of Alton, Ill., announce the arrival of Mary Martha, April 13.

DOCTORS—A. D. Becker, J. P. Schwartz, Byron L. Cash, Howard Granby and Mary E. Golden took an active part in the program of the recent state meeting held at the Savery In Des Moines.

DR. FRED HECKER—is now located in the Berlin Building, in Milwaukee.
D. M. S. C. O.
Corporate Board Meets

The official annual meeting of the Corporate Board of the college was held June 7 at the college building at eight p. m. The absence of our president, Dr. Becker, placed Dean J. P. Schwartz in the chair. Dr. Becker at this writing is confined to his home but expects to be out in a few days.

Roll call established a quorum and the business of the board continued. The annual report attested to by a public accountant proved that the year had been an improvement over the previous one. The financial report showed a profit which, as in the past, although small, means that the college is being managed in a most efficient manner. Every member of the faculty is on the payroll. The usual overhead and laboratory expense must be met and new equipment and repairs must be provided for in the budget. The officers and trustees of the college are to be congratulated for their excellent services of the past year.

With this report in mind President Becker's group of trustees was re-elected by unanimous vote as a tribute to their past record. The one change in the official family was made at the request of Dr. R. B. Bachman who asked to be released from the responsibility of the office of treasurer. Dr. H. J. Marshall was elected to fill this office for the ensuing year. Dr. Bachman making the nomination.

Dr. Howard Graney was elected to the Corporate Board.

Several members present expressed their gratification at the progress the college has made and promised a renewed effort to help increase the student body.

A short meeting of the Trustees was called immediately following the adjournment of the board to provide for the election of the Dean. The coming convention at Cincinnati and Summer student activities were discussed. With the election of the Dean the officers and trustees for the year follow:

President—Arthur D. Becker
Secretary—Katherine M. Robinson
Treasurer—Harry J. Marshall
Dean—J. P. Schwartz
Trustees—R. B. Bachman
H. V. Halladay
G. E. Fisher

We congratulate these seven who will conduct the affairs of the college for another year. We pledge them our support and we know that our confidence is well placed.

The management of a college of therapy without an adequate endowment fund is a difficult task. The confidence and support of the profession is the only factor that will keep most of our colleges of osteopathy open. These officials have certainly fulfilled their obligations.

New Catalog

The presses have started on the new catalog and copies will be available about the first of July. You will find this edition more attractive than any previous issue and you will be surprised at the several fine illustrations taken especially for it.

The committee in charge of publication has carefully checked the statements relative to the additional requirements that go into effect beginning with the next class so that there can be no doubt as to the preliminary educational needs of any prospective student.

If you wish your name put on the list for a new catalog write and one will be sent immediately.

D. M. S. C. O.
At Cincinnati

THE BOOTH—
As in previous years the college will have a booth somewhere among the exhibitors. Be sure to stop and register and get your information about the Breakfast and other items of interest relative to the college. The new catalog will be there for you. This is our official office during the convention and we will be expecting you.

THE BREAKFAST—
Under the leadership of Dr. Arthur D. Becker, president of the college and Dr. H. E. Clybourne, president of the Alumni, the usual Des Moines Still College Breakfast will be held Wednesday morning in rooms A-B-C-D at the Gibson. Plan to be there for some matters of importance to the Alumni will be discussed.

THE EXHIBIT—
Take a few minutes time and spend it with the exhibits offered by the colleges. You will see ours along with the others. This is of special importance to those of you who may have visitors interested in osteopathy.

OUR FACULTY—
Many of the faculty will be at the convention on the program and in offices of considerable importance. Dr. Mary E. Golden is president of the O. W. N. A. and not only presides but is on the program several times. Dr. Arthur D. Becker will be extremely busy with his duties as a trustee of the association, working with the associated colleges and with several talks on the program. Dr. H. J. Marshall is V. Pres. of the I. S. O. and program chairman. Dr. H. V. Halladay is General Chairman of Fraternity and Sorority activities and is on the program as a speaker. Dr. J. P. Schwartz speaks on the Surgery program. Dr. L. L. Facto will appear twice on the program. Dr. O. E. Owen also speaks twice. Dr. Paul Park and several others will attend and all will be glad to greet you. Look for them.

D. M. S. C. O. will be at the convention.

CINCINNATI --- JULY - 11-15
Review Week

An enthusiastic Post Graduate and Review Week has passed into history. The trustees feel that it was successful since the number of attendees increased about twenty percent over the year and the class very definitely expressed its appreciation for the program. Over 800 attended being from fourteen states and Canada. Two physicians graduating in 1901 came the greatest distance. In time and Dr. H. H. Huling traveled the greatest distance in miles being from Hagerstown, Md., Dr. Mabel Sheeds of Albuquerque, N. M., was a close second.

The class organized early under the leadership of Dr. F. H. Deeks of Winnipeg, Manitoba and at the end of the work presented the college with a gift of $100 which was highly appreciated by the trustees.

Mrs. Clybourne and Anderson proved to be the mainstays of the week with their foot and general technic. The regular program of the faculty were highly complimented also by the class of men whom we expressed the desire to return next year for another review.

Dr. Ray G. Hulbert of the Central Office dropped in for a day and brought the glad tidings of the signing of the Burke-Drew Bill by the President of the United States. This bill had previously passed both the House and Senate by a unanimous vote and certainly is an important milestone in the recognition of Osteopathy.

The banquet Thursday evening was held at the Wayside Inn which is ideal for such an occasion. It was over a mile from the city at a beautifully country home, adds to the enjoyment of the famous chicken dinners served and the one hundred rolled up their sleeves, pinned back their ears and ate the bones high on their plates.

The music, consisting of a trio, was sponsored by Dean J. P. Schwartz to give the pleasure of the evening. Dr. Schwartz acting in the capacity of toastmaster called upon Dr. Arthur D. Becker, president of the college, Dr. F. H. Deeks, president of the class, Dr. Ray Clybourne, president of the A. O. O., Dr. L. D. Anderson of Boise, Idaho, and Dr. A. F. Waugh, secretary of the class.

Each of these responded and Dr. Waugh read the class resolutions.

The trustees of the college are very glad of the opportunity to offer each year a Post Graduate and Review week. We believe that those who have attended that week of study without the formality of a conventional setting really brings us together. These courses are becoming more and more requested in some states where attendance is required in order to maintain the license to practice. It will be the policy of the college to continue this review week and each year we will try to increase its usefulness and interest. We feel that if those who are unoccupied can be here, making a sacrifice in time and money that we hope was compensated for by the work given. The following resolutions were adopted and will be filed with our records of this "Fortieth Anniversary" Post Graduate and Review Class.

WHEREAS, the Post Graduate Class of Des Moines Still College of Osteopathy of 1938, has appreciated the opportunities for study for the period of the Course of Instruction, May 30th to June 4th inclusive, and

BE IT RESOLVED: That we extend to the class of Des Moines Still College of Osteopathy our most hearty thanks.

AND WHEREAS, the membership of this class has been privileged to receive instruction, from the faculty of the Des Moines Still College of Osteopathy and from Dr. H. E. Clybourne, of Colfax, Ohio, and Dr. L. D. Anderson, of Boise, Idaho, for their able lectures on foot and osteopathic technique respectively.

THEREFORE, BE IT RESOLVED: That we extend to this group of instructors our heartfelt appreciation.

AND WHEREAS, we believe that this Post Graduate Review, as conducted by Des Moines Still College of Osteopathy, is of great benefit to the Osteopathic profession and that more graduates should take advantage of these privileges.

THEREFORE, BE IT RESOLVED: That we give unqualified endorsement to the College for maintaining this week of the School of Post Graduate Review.

"AND WHEREAS, the members of this Class of 1938 feel deeply obligated to Dr. Arthur D. Becker, President, and Dr. J. P. Schwartz, Dean of Des Moines Still College of Osteopathy, we extend our sincere appreciation.

EVERYWHERE, WHEREAS, the United States Employees’ Compensation Act the services of osteopathic practitioners, within the scope of their practice as defined by the National Osteopathic and United States Em-

The effect of this is to make available to Federal employees receiving within the provisions of the United States Employees’ Compensation Act the services of osteopathic practitioners in the manner and to the extent that such services are authorized by law to be rendered by osteopathic practitioners in all states. It does not compel the United States Employment Security Commission to pay every osteopathic physician who may be called by any government worker. The act remains as it was. Compensation is not paid for all sickness and injury, but only for the treatment of injury incurred in the line of duty. The United States Employees’ Compensation Commission picks its doctors, but it is expected that they will no longer maintain the bill which made more than 20 years ago barring osteopathic physicians from receiving pay under its provisions.

Fraternally,

Ray G. Hulbert, D. O.

THE DREW BILL

The profession as a whole has been watching closely the progress of the Drew Bill amending the Federal Employees Compensation Law. This bill passed the House and the Senate on an unanimous vote and was laid on the President’s desk for his signature. This was signed by President Roosevelt. We have the following for release from Dr. Hulburt of the Central Office.

June 1, 1938

To the Editors of Osteopathic Publications

The President Roosevelt has signed the bill, which passed both the House of Representatives and the Senate under unanimous consent rules, amending the United States Employees’ Compensation Act. The following paragraph 5 of Section 40 reads as follows:

"The term ‘physician’ includes osteopathic and allopathic practitioners, within the scope of their practice as defined by state law.”

The term ‘physician’ includes osteopathic and allopathic practitioners, within the scope of their practice as defined by state law.

The effect of this is to make available to Federal employees receiving within the provisions of the United States Employees’ Compensation Act the services of osteopathic practitioners in the manner and to the extent that such services are authorized by law to be rendered by osteopathic practitioners in all states.

The effect of this is to make available to Federal employees receiving within the provisions of the United States Employees’ Compensation Act the services of osteopathic practitioners in the manner and to the extent that such services are authorized by law to be rendered by osteopathic practitioners in all states.

The effect of this is to make available to Federal employees receiving within the provisions of the United States Employees’ Compensation Act the services of osteopathic practitioners in the manner and to the extent that such services are authorized by law to be rendered by osteopathic practitioners in all states.

The effect of this is to make available to Federal employees receiving within the provisions of the United States Employees’ Compensation Act the services of osteopathic practitioners in the manner and to the extent that such services are authorized by law to be rendered by osteopathic practitioners in all states.

The effect of this is to make available to Federal employees receiving within the provisions of the United States Employees’ Compensation Act the services of osteopathic practitioners in the manner and to the extent that such services are authorized by law to be rendered by osteopathic practitioners in all states.

The effect of this is to make available to Federal employees receiving within the provisions of the United States Employees’ Compensation Act the services of osteopathic practitioners in the manner and to the extent that such services are authorized by law to be rendered by osteopathic practitioners in all states.

I. S. O.

An extensive program beginning July 8 with a breakfast at the Netherlands Plaza has been planned for the I. S. O. group.

The three days following will be merged with the O. & O. L. and the convention largely of clinics. Eye, Ear, Nose and Throat specialists should make their reservations early and be on time for these pre-convention sessions.
Senior Days

Three days at the close of each semester belong to the graduating class. Class Day this year was May 20, Senior Day May 26 and Graduation, May 27 were planned and carried out according to schedule.

The program designated Class Day for Saturday. Graduates were largely under the direction of Mark Gerlach as Emcee but the talent was well distributed throughout the entire class. Following the introductory music with Mark as Ringmaster, Dick Simpson and a group of the class delivered his touching oration on the regrets, the joys and the memories of the May class of 1938. As with the history, Bill Daniels then offered the Prophesy and with his closing with the document, The Will which being in legal form and sworn, attested and sealed, provided eternal safety for all the prides, gains, losses and assets of the class. Each of these from the president on thru the program were loudy cheered for both wit and wisdom.

Not to be outdone by previous classes the group next offered a highly entertaining travesty on the day's happenings starring the headgear of the female more than any other article of apparel. Needless to add that while ridiculous, many of the creations were not so different from what may be seen almost any day on the main street. One high light of the morning was the Dissection Harmony. Stage set with the usual tables and cadavers and the scene was carried out to perfection. Several members of the faculty were decorated and well done it was not difficult for the audience to guess who.

Dick Simpson followed this act with a presentation to Dr. Arthur D. Becker with a diploma awarding him a special number in the osteopathic profession who have contributed so generously of time, money and constructive effort to our progress during the past year. Without that kind of cooperation and interest, we feel that our own efforts would have been measurably discounted. I can not escape the conviction that the continued success of the osteopathic colleges is the intimate concern of the entire profession.

Our student enrollment during the past year was the largest for several years. The character and measure of scholastic attainment was definitely superior. Quite as usual, our clinic constantly taxed our ability to care for it in any thing like an adequate manner. We need to increase our student man power if we are to capitalize the full value of this great clinical teaching opportunity.

It was inspiring to wind up the year's work with the most successful week of Post Graduate Review and Clinic in the history of the college. One hundred twenty osteopathic physicians from fourteen states and Canada were registered. Expressions of appreciation and comments of approval were heard on all sides. The program was well balanced and osteopathic technique was given its proper prominent place in the general scheme. The visiting physicians were enthusiastic in urging the continuance of this Post Graduate Course.

At the risk of appearing facetious I am seriously tempted to quote an expression from a popular radio program. "We are happy about the whole thing." — Arthur D. Becker, D. O.

Presby Injured

Dr. Arthur D. Becker accompanied by Mrs. Becker and Dr. Ray Huburt started Friday, April 5, on a triangular tour, the last six miles of which will be long remembered. Returning from Kansas City he was picked up by Dr. Alan Becker of Wichita, the trip was made with ease and security until about six miles south of Des Moines. Mrs. Becker decided to relinquish the wheel to Dr. Becker. The machine was parked on the shoulders and Dr. Becker got out to walk around the rear of the car to get in on the drivers side. A drunk, returning home and driving south, drove entirely across the road and caromed off of the front left fender and rammed Dr. Becker's parked car, while being in neutral at the time was projected backward knocking Dr. Becker from the car and pinning him under the rear bumper and fender so that help from a passing car was needed. He was extricated and for state police was put in and they, upon arrival, took the situation in hand and arresting the drunken driver and releasing Dr. Becker from any responsibility for the accident. X-Ray examination showed no broken bones but our president is badly bruised and is suffering from some very severe sprains of the spine and extremities. He was fortunate in escaping from the impact of the car with as few injuries as he has. He was taken in on a few days but it will take several weeks to complete his recovery. Mrs. Becker and Alan suffered only from shock and a rather bad shaking.

The trip was made primarily to meet with the graduating class of the Kirksville College who requested that Dr. Becker give their commencement address. Dr. George Laughlin, President of the Kirksville college took this occasion to honor Dr. Becker with a diploma awarding him the honorary degree "Doctor of Science in Osteopathy" and is doing so reviewed for those assembled the enviable record of service of Dr. Becker to the profession since his graduation from the Des Moines Still College of Osteopathy in 1903. After the graduation ceremony Dr. and Mrs. Becker drove to Kansas City to meet their son, Dr. Alan Becker who had planned a few days at home.

Dr. HAROLD K. MORGAN—of Denver and Miss Catharine Burtch were married May 20. Dr. Morgan completed his Internship in Denver and will locate soon at Monte Vista, Colo.

Dr. AND MRS. E. F. PEARSONS—residents of Rutland, Vt., announce the arrival of Mrs. Annette April 14.
This is the first official release of Society news to the Log Book by this administration. The fact that our State meeting falls almost on date for the release of the Log Book makes it practically impossible for the present administration to prepare a release for the month of May.

Let me say that our future use of these columns will indicate our appreciation for the School's offer of the Log Book to our Society for getting news to our State and National members.

We regret very much that during the last half of the past administration we have been obliged to carry on without the able direction of President Woods. Dr. Woods, due to illness, has been unable to perform this regal duty for the last part of the year. He has our sympathy and sincere wishes for a speedy recovery.

This is a fitting place to mention the many fine qualities that characterize our A. O. A. president, and his fine accomplishments and their excellent contributions to our Society. Their devotion to their duties is an inspiration to us all.

The growing confidence by the Iowa practitioners in the present officers of the administration is demonstrated in the constantly increasing membership. At our last meeting thirteen made application for membership which expanded our rolls to a total of 233, which is the largest membership ever attained by the Society. This, we feel, is very encouraging to what our membership was some years ago when it had dwindled to a mere seventy. This shows that the past administration has not been idle but that it has been able to turn over to the present administration a Society, with a healthy cooperative membership equal to any peak membership of all time. The fact that our committees of the different departments showed more devotion to their duties in the different departments than for many past years was demonstrated by the necessity of the extra heavy business sessions which took twice the ordinary time for the reading of many fine reports and the increased business entailed by this activity.

The devotion of our Secretary and Treasurer to his duties should be an inspiration to us all to do better work. We were delighted at the unsolicited reaction of many practitioners to our request for their receipt of the copy of the Log Book prepared by our secretary for the deliberation of our Trustees. Mr. M. J. Royer was pleased that it was the most complete preparation for any State Convention they had ever received.

I must say here, that I am most happy that Gordon's services as secretary for another year. I find his help in selecting committee men has been most valuable and when that task of appointing all committee men has been completed and when the appointments are all made and announced, we should have a set-up that will do a real constructive work.

W. C. Chappell, Pres. 444

Resolutions were passed at the State Convention of the Iowa Society of Osteopathic Physicians and Surgeons, asking the profession to organize County Societies in all of the counties of the state and which the physicians are practicing. It was suggested that if there were an insufficient number to organize in any one county, two counties might organize together. Will each secretary please report the names of the physicians in each county and the names of the doctors who should be invited to their county meeting. This is a tribute to the Maternal Child Welfare Division of the National Security program. All Osteopathic womanhood should attend the luncheon and any men who are interested are cordially invited.

The Afternoon Section meeting is held Tuesday at four o'clock, and Mary Lou Logan of Texas has planned a fascinating two hour professional program. All committee reports for National should be sent in at once. Mary E. Golden, D. O. President, O. W. N. A.

The following doctors have made application for state membership: C. F. Gowan, Marion; F. M. Geist, Des Moines; Ruth Moore Paul, Des Moines; Earl O. Sargen, Des Moines; E. E. Thielking, Des Moines; H. F. Heldeman, Des Moines; J. P. Hull, Des Moines; W. P. Kelsey, Des Moines.

Polk County

The Polk County Osteopathic Association held the closing meeting of the season Friday afternoon at the Chamberlain. Following the dinner, Dr. R. B. Bachman spoke on his recent trip to Little Rock, Arkansas, to attend the Osteopathic State Convention held at the Albert Pike Hotel on May 27 & 28. Interesting papers were presented at the Convention that was of great importance to the well-being of both mother and child. In the business meeting which followed, officers for the coming year were elected:

President—Dr. T. Bruce Farley
Vice-President—Dr. Vern J. Wilson
Secretary—Dr. O. Edwin Owen
Treasurer—Dr. C. O. Meyer

The Polk County Association closed the year with a membership of forty-three, the largest membership in its history.

The organization is looking forward to next year work with great enthusiasm.

O. Edwin Owen, D. O. Secretary

The National meeting of O. W. N. A. will celebrate eighteen years of growth.

Sunday, July 10th, will be given over to the Business Meeting of the O. W. N. A. Convention throughout the balance of the week. Meet- ing called to order at 19 a. m. in the Hotel Gibson at 12:15 p. m. sharp. Mary Hough will preside and Dean Harrel P. Elliott of the Woman's College of the University of North Carolina will be the speaker. Dr. Elliott is an outstanding woman, both educationally and in her relationship to the Maternal Child Welfare Division of the National Security program. All Osteopathic womanhood should attend the luncheon and any men who are interested are cordially invited.

The Afternoon Section meeting is held Tuesday at four o'clock, and Mary Lou Logan of Texas has planned a fascinating two hour professional program. All committee reports for National should be sent in at once. Mary E. Golden, D. O. President, O. W. N. A.

Interns

The graduating class stands high in the matter of internships. At the present writing the following members of the class of 1938 have been accepted in eleven osteopathic institutions:

On to Cincinnati

Do you realize that in three weeks you will be on your way to our annual national convention. We will be there to greet you and we want to see every member of the profession there to make it another big osteopathic meeting. With the encouragement of the passing of the Drew Bill the profession is better able to secure the cooperation of the medical associations. Our support of our own associations as well as give a service that is in demand. You will need the week of study and recreation and you will return to your practice feeling bigger and better both mentally and physically.

Cincinnati has been planning well for the past year. They are a great convention and the official program and entertainment. Unofficially there is enough of interest in and around Cincinnati to keep you there for a much longer time for there are many interesting places that are worth a visit. On the side—you would be interested in seeing the Giants and the Reds play? They are both in the upper bracket and it looks like we will sneak away for a game.

The Zoo, Coney Island, the Art Museum, Taft Museum, Rookwood Pottery plant and many more. All committee and tour leaders will be at your service and will do their utmost to make you feel at home. Dr. Facto, the boys, Louie and Lonnie, and their little dog "Penny" made a trip to Little Rock, Arkansas, to attend the Osteopathic State Convention held at the Albert Pike Hotel on May 27 & 28 and the Convention was practically completed.

Altho the number of Osteopathic Physicians in the State is small, in comparison with those of other states, the Convention was nearly one hundred. I am sure that I have mentioned a group that seemed to appreciate the lectures and the technique demonstrations.

On Friday evening they held their banquet at the Little Rock, Arkansas. There were a number of good towns without a library, and some of the larger places have room for many more. We had a nice time and enjoyed very much that friendliness of the people which is so characteristic of the South.

Dr. Facto

I.S.O.P.S.
CINCINNATI CONVENTION

The Lone Star State won a decisive battle over its rivals in the race for the next convention by masterfully not only its own 100% army, but also by strategy of every form. Armadillos, bailes of cotton, barbers, flags and a group of entertainers made the entire convention at Cincinnati one of the highlights of the southern empire that finally roped and tied the profession for the next official meeting. We were for a time engaged in making out a list of things to be solved and there is no point in discussing them, for we will be there early and stay late for, we have already sampled the brand of hospitality that Texas furnishes, in the form of several state conventions, and we know that they have something up their sleeves that will put on a convention that will be something to shoot at, and not with a gun, either. We think this is a fine tribute to the men and women of Texas and neighboring states who have for many years worked well in official capacities. The eyes have turned for the next twelve months will be on Texas.

Arthur Allen of Minneapolis will preside and be followed by a procession for the next year. This is another tribute to the talents of the men of Minneapolis, and Art has been in the harness for a long time and we know this next year of osteopathic progress will be a successful one.

Dr. Ella Still Dies

The many friends and former students of Dr. Ella will be shocked to learn of her death. For the past several months she has been failing rapidly due to her advanced age and organic disease. During the past seven years, since the death of Dr. S. S. Still, she has made her home with her daughter, Mrs. Guy Brunk, in Des Moines. Her health failed, occasionally made a visit to the college that she and her brother entered the American School of Osteopathy and graduated together. Dr. S. and Ella then came to Des Moines and together with others interested in osteopathic education founded Collin Brook College.

During her many years of close association with the profession Dr. Ella carved for her services were her daughter, Mrs. George A. Still, who was the beloved of the College and office of professor of the Council to assume some of the responsibility.

The culmination of a romance beginning at our college was a bit of news early one morning late in the week. Dr. Howard Ziegler of Cincinnati purchased a marriage license on Wednesday, July 13. They will practice in their city, and good wishes are extended to them. Both were popular students while in college. Mrs. Still has been interning at Denver until recently, and Howard finished his internship at Seattle several months ago.

The Still College breakfast was a success, there being about 40 present. Cy Cyborne, president of the college, presided and called upon Mrs. Becker and Rogers for short talks. Both were popular students while in college.

The Lon Star State won a decisive battle over its rivals in the race for the next convention by masterfully not only its own 100% army, but also by strategy of every form. Armadillos, baile...
Arthur D. Becker, B. S., D. O., D. Sc. O.

It seems unnecessary to call your attention to our president, Dr. Becker assumed this responsibility three years ago feeling that in this institution he had the opportunity over a program of real osteopathic teaching. He has done this with the evidence of results is inspired to continue this much needed plan. His record since his graduation from this college over twenty-two years has been an invaluable one. His osteopathic experience has been gained in practice and in the close association with college work and the central office of our profession. Everyone that can be bestowed by our profession has been earned by Dr. Becker.

As evidence of his popularity and respect within the profession, he has traveled several thousand miles last year meeting state and district conventions in every direction of the compass. As president of this college Dr. Becker inspires the teaching of unadulterated osteopathy. He has often said, “It is our business to teach osteopathy first, last and all the time. If our students are to be successful they must have something that will get results. Osteopathy will do that better than any other type of therapy”. Under his guidance your students will be graduated osteopathic physicians.

J. P. Schwartz, D. O., F. A. C. S.

Our Dean is an extremely busy man. He not only assumes the responsibility of his office at the college but also is president of the board of the Des Moines General Hospital and Surgeon-in-chief. His integrity and excellence in his specialty have made demands upon his time that have necessitated more frequent rest periods. It is a twenty-four-hour a day job being the head of a busy hospital. Add the position of Dean of the college with its cares and there is little time for rest or recreation. Dr. Schwartz is a human dynamo and does carry on at high speed but he is efficient and extremely careful of the details and no one in the profession stands higher in the estimation of his associates. He is also in great demand as a speaker at conventions but his many duties to the two institutions he serves prevents the acceptance of all invitations.

Dr. Schwartz has been associated with the college for nearly twenty years first as an instructor and later as a member of the staff of his alma mater. His home in the city is always open to his coworkers and his Summer cottage at Lake Okoboji is an ideal haven for a week-end rest.

R. B. Bachman, D. O.

Our college boasts of experienced and authoritative instructors. One of these is in the person of Dr. Bachman who for twenty-two years has headed the department of Obstetrics. This is an extremely busy phase of the work at our college for the department takes care of approximately four hundred cases each year in the clinic. It is not an easy task to plan a practical lecture course, supervise the conduct of the cases in the clinic and attend to the numerous calls of a practice. Dr. Bachman has been able to carry out his work for many years being aided by expertly trained assistants taken from our own student body. Thru this department each student must pass and conform to certain established rules. If being done, the credit is awarded but only after the college is satisfied that the student has a thorough understanding of this important subject. Dr. Bachman has made osteopathic obstetrics mean something not only in Des Moines but thru his students in many other cities and communities. The number of maternal and infantile deaths has been below the average due to the careful attention to the condition of the patient and the osteopathic treatment administered to each case to insure normalization if possible.

Another member of our faculty in charge of a department is Dr. Harry J. Marshall. To list his activities would take too much space for since his early association with osteopathy he has assumed many responsibilities. These have mainly been offices having to do with his specialty of Ear Nose and Throat but he has served on the state board of examiners and is now a member of the board of trustees and treasurer of the college.

In addition to his lectures and clinical supervision of cases at the college Dr. Marshall is a busy member of the staff of the Des Moines General Hospital and one of the licensed surgeons. The minor surgical clinic at the hospital has grown almost beyond the capacity of the institution due to the efficiency of this work in the hands of experts like Dr. Marshall and others of the staff. Such experience as this is invaluable in planning a practical course of lectures and demonstrations for students. New methods must be tried. The better ones accepted and constant attention given to the results before authoritative instruction can be given. Dr. Marshall is methodical and conservative and as such is a valuable member of the staff of both institutions.

H. V. Halladay, F. A. D. O.

In the very beginning of osteopathy Dr. A. T. Still stressed the importance of a thorough knowledge of Anatomy. His compilation of the subject was different in interpretation from that in the mind of the average physician.

In Dr. Halladay, head of our department of Anatomy, we have that keen appreciation of the osteopathic viewpoint and at the same time the ability to impress the detail and scope of the subject upon the students mind. His experience was gained in the laboratory where his research on the application of the theories of osteopathy and put osteopathic technique on a true scientific basis. For the past twenty-five years he has been a regular speaker at the national convention and many state conventions. His interest in Orthopaedics and trauma has resulted in him being known thruout the country as an authority on athletic injuries not only within the profession but among coaches and trainers of many of our best known teams. Dr. Halladay has also gained distinction as a writer having compiled his research into book form and is a frequent contributor to the scientific publications of the profession. As Executive Chairman of the National Osteopathic Interfraternity Council he has done much to raise the standing of our osteopathic organizations and bring them into a harmonious working group. He is also a member of the board of trustees of the college.

Joplin Hospital

A new osteopathic hospital is open in Joplin, Mo., with Dr. W. E. Heinlen at the head. Dr. Heinlen who has been operating a hospital at Verona, Mo., saw the opportunity for a like institution in Joplin and being encouraged by the group of osteopaths in the city sold his Verona institution to Dr. F. A. Watson of this city and after completing the remodeling of a two story and basement building opened his new hospital June 5. It is completely equipped for diagnosis and surgery and provides a registered nursing service.

Dr. Heinlen and Watson are graduates of our college and have had considerable experience in surgery beginning with interneship in the Des Moines General Hospital. We extend to them our congratulations and best wishes for their success.

Osteopathy Without Limitation

The forty-second consecutive annual convention of the American Osteopathic Association has passed into history. The Convention Committee of Cincinnati proved to the world that they know the many intricacies of the task of playing host.

The national osteopathic convention is not a three-ring show, but it could more accurately be described as a forty-ring one. I think the program was evidence more of a sincere and active interest in the many sessions of the general program and of the various sectional and group meetings.

Dr. R. McFarlane Tilley, the program chairman, set an all-time high in convention programs. One wonders how long it may be possible for each year to see continued growth in excellence.

My warm personal friend Dr. Frank Jones of Macon, Georgia, was elected president-elect. Our sincere congratulations to him, and our pledge of hearty cooperation.

Des Moines was honored in the election of Dr. Mary Golden as third vice-president of the A. O. A., a most fitting tribute to her. She is a most fitting tribute to Dr. Facto, the subject of Technic. Physical Diagnosis. The many tests made on patients during his years of service with the A. O. A. has been larger than we could have imagined until the last few weeks of the convention period. We call that real education.

Many matters of policy requiring most careful consideration came up for evaluation and decision and were handled in a fearless and competent manner. Many forward steps of momentous importance were the result of the work of your house of delegates and your board of trustees.

Our very efficient and able trustee from Iowa, Dr. F. A. Gordon, was re-elected for a three-year term by the highest vote given to any trustee, a true estimate of the high regard of his colleagues in the House of Delegates.

I am firmly convinced that the 42nd convention of the A. O. A. will be regarded as one of the greatest milestones in our history of osteopathic progress and development.

Arthur D. Becker, D.O.

For Osteopathy

Each member of our profession is working for the advancement of osteopathic education. They have the majority of us follow year to year a sort of a routine. In these, we are in practice the greater part of the year, and the year is regulated by the clientele. We do take time off for recreation and during the month of July, when the school is not in session, for the national convention and a few weeks vacation. Where in that schedule is the routine time set for working for new students for our colleges? Those of us who are intimately associated with the colleges depend on you in the field for more than fifty percent of the enrollment. This is not an influx of students, but for our individual benefit as might be interpreted but for the perpetuation of our science, we believe the instruments of your judgment in the education of those sent.

It is the business and pleasure of the faculty of our college to have their continued cooperation. It requires the студента to return to work now. It takes much personal energy to put in the subject of Neurology and with them we want to make the students happy and satisfied, so that they will be happy and satisfied, and in the subject of Neurology in which we are very proud.

Our officers are at your service to help. The new catalog is available. Our faculty, which are very well known, is demanding osteopathic more and more and the supply to meet this demand comes largely from the influence in your own community.

The convention and a vacation then back to the beginning. In between, it is our business to remind you of these things and it is your business to return to work now. It takes much personal energy to put in the subject of Neurology and cooperation. It requires the studента to return to work now.

E. Harwood

G. F. Fisher,
A. B., B. S., D. O.

In the curricular plan of an osteopathic college there must be some one person responsible for the conduct of the College. Our college stresses the contact advantage of quantity and variety and it is in this department that Dr. Facto brings together the student physician and the patient. His practical and clinical experience in England and her teaching of philosophy with the college have given him an exceptional insight into diagnosis of the cause. His deep interest in the subject of Neurology enables him to quickly visualize the treatment plan and having been an exceptional student in Anatomy he appreciates the osteopathic concept.

In addition to his work in the Clinic Dr. Facto teaches the subject of Techinque. Physical Diagnosis and Nervous Physiology all of which are key subjects in the training of a student of osteopathy. His analytical and practical mind is richly stored with facts that make him an able speaker at many professional meetings throughout the year.

DR. M. H. BEATTIE - of Kirkville, Mo., who has been confined to his bed for several years with Spondylitis died June 25.
THE LOG BOOK

THE J. S. O. P. S.

(N.B.—Dr. Chappell is on the job. This month we are publishing your committee's report on the job. If you refer to it, you will need time some time during the coming season. If your name is mentioned here, remember that a confidence has been placed in your ability, and the state society expects you to fulfill an obligation.—E.B.)

The following are the appointees to the different Standing Committees of The Iowa Society of Osteopathic Physicians and Surgeons, Inc. All the appointees have had the approval of the Trustees and Executive Committee of the Society to serve during the fiscal year which will begin May 1, 1938 and end May 1, 1939.

VI District
(1) Dr. Nellie Kramer
(2) Dr. H. L. Gulden
(3) Dr. F. D. Campbell

Signed: C. W. CHAPPEL, D. O., President.

The following applications for membership have been received in the office of the Secretary:

M. R. Russons, Correctionville
M. R. Anderson, Adair
Anna Slomc (‘38), Des Moines
Paul O'Shaan (‘39), Des Moines
George R. Simpson (‘38), Des Moines
F. A. Gordon, Secretary.

MEN ARE NOT THE ONLY SUCCESSFUL MEMBERS OF OUR PROFESSION.

(Continued from Page One) which cut our broadcast off the air for a time, and a little later ruined our p.m. at the ball park where the Giants and Reds were playing to a double capacity crowd. That p.m. will be long remembered.

The program was excellent. It was well planned and all the other features were very well attended by the crowd, which had the program well worth the effort. The Saunders program was very well received. The program was a success.

Dr. Ella Still Dies

(Continued from Page 1) also was present. The following students of the college acted as pallbearers: R. W. Long, Dr. Robert Fagen

M. R. Russons, Correctionville
M. R. Anderson, Adair
Anna Slomc (‘38), Des Moines
Paul O'Shaan (‘39), Des Moines
George R. Simpson (‘38), Des Moines
F. A. Gordon, Secretary.

Dr. Robert O. Fagen—of Hawarden, Ia., will, in the near future, be associated with his father, Dr. L. P. Fagen of Des Moines.

Dr. and Mrs. H. D. Meyer—of Luverne, Ia., announce the arrival of Douglas Clifford, July 3.

CINCINNATI

The Scientific Exhibit, although in the Hotel Gibson, attracted many and was well arranged and displayed. It presented a beautiful view from the mezzanine and was seen by more people than on the regular channel.

The convention was a success. All things were accomplished and the high quality and history were really made. We are glad it is over and yet the time goes too fast. But we have another year ahead and it is up to all of us to plan right now for the 1940 meeting.

Men are not the only successful members of our profession. Dr. Ella Still was buried on the forty-fourth anniversary to the day of the very beginning of osteopathy. Dr. A. T. Still states that at 10:30 in the morning of June 22, 1874 he finally saw the light of a new therapy. Another member of the Still family has passed on to greater rewards but not before she saw the fruit of her work in the parochial osteopathic physicians that she helped to educate and carry the truth of osteopathy to all nations.

The sincere sympathy of the officials and every alumni and student of the college is extended to those who remain. We know they mourn her passing but death must come to all of us. May we live so that when our time comes there will be those left who may, as this family can, look back with pride in their association with one who served well.

Mary E. Golden, D. O.
Prexy Returns

Following the strenuous work at the convention Dr. Arthur D. Becker our president, took a much needed rest for a couple of weeks. Most of the time was spent in the vicinity of Pontiac, Mich. where his son, Rollin, is in practice. From the way he looks we think he must have been out in the open a good deal and probably fooled a couple of innocent fish into thinking he was generous with food. He says he is back to normal now; his accident and the convention neither one leaving any bad scars, and he is ready to belt on the armor and get to work. We are all happy to see him looking and feeling so well.

So Long

Teachers and officials of osteopathic colleges are not thru when the bell rings the last of May. During the month of June and most of July the vacation consists of working only 12 hours a day instead of eighteen as is usual during the college year. But in August when the responsibilities of the convention are over lets follow some of our faculty and see if they take the proverbial "Motorman's Holiday".

Dr. H. V. Halladay plans to take most of the month of August skidding around over the Southwest. He has a speaking date with the Kiwanis Club of Albuquerque, N. Mex. the 10th of August thru the courtesy of Dr. L. M. Pearsall of that city and from there will disappear into the Indian country looking for bones and cacti. He hopes to visit the osteopathic hospitals at Denver and Raton but will avoid any other professional contacts if possible.

Dr. O. E. Owen will make an extended trip to California with relatives, visiting at Salt Lake City on the way out and making stops at the Grand Canyon and Carlsbad Cavern on the return. Ed must get into a cave each Summer or the year is wasted. We hope he will be able to squeeze into the Big Room at Carlsbad which is almost the same as the Grand Canyon with a roof over it.

Curricular Activities

Dr. J. P. Schwartz will spend his available time at his cottage at Lake Okoboji and it is an ideal place to relax and absorb the full benefit of the sun and water.

Dr. Harry Marshall will save his vacation time until later in the year and will escape from Iowa ice for a southern tour about Christmas time. He will drive with his family.

Dr. Mary Golden expects to take a couple of weeks off as usual finding new and interesting scenic spots. Her trip will include a visit with her sister in Washington, D. C.

We're Getting Ready

We took a little walk the other day, as is our habit now and found the Fall work. Letters from students who were here last year indicate that they are about ready to return, even tho they have several weeks yet to go before the required registration day. The faculty is getting over the strenuous work of the annual convention, and those who have not left for the Summer vacation trip will be taking time out during the month of August. Our personnel, faculty and students, will be ready.

We have noticed considerable activity on the various floors of the college building from time to time. The walls are now cleaned or painted again, and with a little work to be done on the desk-arm chairs the rooms will be ready to ring forth with the lectures as of old. The laboratories also have been given considerable attention, some new equipment being unpacked and everything checked so that time will not have to be taken out waiting for material to arrive or supplies to be sorted. The place looks spic and span except the waiting room and the series of adjoining treatment rooms.

We don't mean to imply that these have been neglected in the Summer clean-up. Not at all. We wish you could have been here during the past ten weeks. The same old story that we have been printing for years. Too many patients and too few students to take care of them. Too many OD cases and too many other outside cases. Some of the boys during one especially busy week had no sleep for two nights and yet they carried on. More of you students must stay here during the Summer to take care of the many who need treatment. Those who could wait and were not in acute danger have been asked to wait until the classes return. The second floor has been in continuous use. Help!!

As to the prospect for a big Fall class who can tell? The correspondence looks as if we would all be happy, even with the one year added preliminary

(Continued on Page Three)
Our Organizations

Our own college is keenly aware of the fact that to learn how to work with the other fellow you have to plan organization plans and activities while in school. For this reason the college authorizes encourage our fraternities and sororities that are accomplishing something. We believe that each of those listed below is doing their best to plan a program of advancement. It is the business of the college to look into the workings of each of the organizations on the campus and all have been commended for their spirit of cooperation and offers of help when difficult knots are to be untied.

We are proud to list the following recognized organizations:

Local Osteopathic Interfraternity Council
Atlas Club--Wm. Costello, president.
Delta Omega--V. O. Gehman, president.
Iota Tau Sigma--A. S. Barnes, president.
Lambda Omicron Gamma--Al Yarrows, president.
Phi Sigma Gamma--J. W. Yarrows, president.
Sigma Alpha--Nell Kitchen, president.
Sigma Sigma Phi--Leo Sanchez, president.

The Local Council is made up of representatives of each of our fraternities and sororities and regulates the activities of its membership. Although the Psi Sigma Alpha and Sigma Phi are honorary fraternities, they take part in the deliberations and when applicable submit to rules and regulations with the same cooperation as the social members.

These chapters of national groups are all in good standing with the grand chapter of their national organization and each made an excellent record during the past year's work. At the present writing the fraternities and sorority are dormant, but watch this list of workers about the first of September. They will be back early and stay late waiting for the new classmen, in order to do everything to make the new students feel at home. The rushing season does not begin until after Labor Day, and the girls know how they felt when they came into a strange community, and they are ready to help you, as a new student, find a room and get located without confusion.

You can't join all of them, but we recommend that you join the one you like best.

O. E. Owen, B. S., M. A. D. O.

The subjects of Pathology and the Basic Sciences need a teacher well grounded in all sciences yet with a full appreciation of the osteopathic application. Dr. Owen fills this requirement for his pre-osteopathic college and university training and teaching of science gave him a background essential in the successful interpretation of these subjects. To be able to actually see the story told by a microscope is only half of the duty of an instructor. He must also be able to separate these findings into units that may be understood by the novice so that the field is not a confusion of stains, but a interesting story of the minute findings that mark the beginning of disease within the body. Dr. Owen takes particular pride not only in the excellence of his class and laboratory work, but also in the accumulation of a fine museum of Pathology which is of great value in demonstrating the gross changes that are found in diseased tissues. The endocrino system and hereditary tendencies have also attracted his attention and he is called upon frequently to explain these little known influences on the growth, development and regulation of the body. To associate the osteopathic lesion with these conditions takes the mind of a true scientist and we can depend on the interpretations offered by Dr. Owen.

Byron L. Cash, D. O.

The operation of an X-Ray machine and the interpretation of X-Ray findings is not a job for a novice. In Dr. Cash we have a man of vast experience over a period of years and covering not only the usual type of X-Radiology in the hospital, but also in Army camps. Having taken special courses in Chicago and at the University of Michigan, Dr. Cash is qualified to judge and grade the work of others and is familiar with the newest equipment in X-Radiology and Physio-Therapy.

J. L. Schwartz, D. O.

The subject of Proctology is one that needs close attention to detail. The many cases in practice and the several types of treatments used make it a subject that is constantly changing. As a specialty, Proctology is comparatively new, and the education of a student in the finer points of diagnosis and the application of the proper type of treatment should be in the hands of an experienced physician. Dr. Schwartz is an experienced physician, having been a member of the staff of the Des Moines General Hospital for nearly twenty years. During that time he has attended several special courses in his specialty and with the great number of cases that come under his observation he is well able to plan a course of therapy and demonstrations on the subject.

Henry E. Sampson, A. B., B. Ph., Ju. D.

Mr. Sampson, a true friend of Osteopathy and a recognized legal authority in all malpractice defense matters, makes an ideal instructor of Medical Jurisprudence. He is keenly interested in the profession and its practitioners. Although he carries on an extensive law practice in Des Moines, he always finds time to meet osteopathic groups and carry on evening study sessions and the consideration of special legal problems affecting the profession.

N. O. I. C.

THE LOG BOOK

The meeting held at the Netherland Plaza July 11 closed the most successful year in the life of the National Osteopathic Interfraternity Council. The order of business was closely followed, and with all organizations except one represented. A constitution was adopted, and the Lambda Omicron Gamma fraternity was voted in. Other minor items of business were disposed of and officers were elected. This organization, which has lived only from year to year, seems to have made a place for itself so that it will now become a permanent part of our fraternity plan.

The work of the office of Executive Chairman has been divided so that part of the responsibility will be taken over by the newly elected president, Dr. I. J. Grinnell of Palestine, Texas. The undersigned continues for another year in the office of Executive Secretary, and those of you who will act in the official capacity of representatives will soon be on the mailing list and will receive your instructions.

Not all have notified us of their new officers. The following have done so, and this list is completed we will add it to the major officials for the coming year.

Atlas Club--Grand Noble Skull, Floyd Peckham of Chicago; Grand Ocepal, J. Robert Forbes of Ft. Dodge, Iowa; Grand Sacrum, Ralph Rice of Opelousa, Louisiana; Grand Assis, J. S. Gourley of Trenton, N. J.; Grand Alpha, A. T. Thorburn of New York City; Grand Gamma, Dr. O. G. Peckham of Chicago; Grand Omega, Dr. J. E. Schwartz of St. Louis.

Axis Club--Grand President, Grace Simons of Minneapolis; Vice-President, Mary Lou Logan of Dallas; 2nd Vice-President, Louise Gourley of Trenton, N. J.; Secretary, Miss L. F. Dominette, Idaho; Treasurer, Eva Maung of Providence.

Sigma Phi--Grand President, Thomas Thorburn of New York City; Secretary-Treasurer, Walter Bailey of St. Louis.

Lambda Omicron Gamma--Grand President, Sydney M. Kanev of New York City; Corresponding Secretary, Jacob P. Rapp of Philadelphia.

Psi Sigma Alpha--Grand President, O. E. Owen of Des Moines; first vice-president J. C. Eschilman of Youngstown, O.; second vice-president G. N. Yarrows of Kansas City; secretary-treasurer J. W. Hayes of E. Liverpool, O.

Many of our organizations have more officers than we list above. The names are those with whom either you or we may have occasion to contact. Seven of our members are planning to enter in their new officers. Mail me this list before September first—please.

Osteopathy Without Limitation

Vacations

In this busy world of modern living we have pushed ourselves into a degree of activity which is fundamentally based upon speed and then more speed. There is no criticism intended for such a situation. It is the new tempo. Conditions change, and it is necessary to change few a day, with the old selves out of step and left behind.

The more leisurely gait of yesterday was well suited to the needs of yesterday. Radical differences are demanded. Transportation has changed from the horse drawn stage coach to the modern motor car and the airplane. News is sent around the world in a few seconds by radio as compared with former methods of dissemination by the pony express and sailing ships. Mass production by intricate machines has replaced much of handwork methods.

In this connection, it is well for the reader to remember the interesting and important fact that while the pace has changed and the speed of life and living has been immeasurably stepped up, the human body has changed very little, and the news is sent around the world in a few seconds by radio as compared with former methods of dissemination by the pony express and sailing ships. Mass production by intricate machines has replaced much of handwork methods.

Conventions

Since I have been home for a couple of weeks following the convention I had time to think the thing over. It is getting close to twenty-five convention I attended, and I have had the pleasure of seeing them grow into rather a large affair. In this connection I have the pleasure of helping to put on an A.O.A. convention here in Des Moines, and I think I know what it means to plan for these affairs. I have seen the official family of our association change in personnel and distribution of function. We now elect our president a year ahead, which is a good thing, for he has that time to prepare for the problem. This makes for better presidents.

The one thing that has not changed is the method of selecting our next convention city. I think there is something to the idea of doing it in the same way we do our president. I can see the advantage of traveling, too, the system is perfect. The thing that I think is important is the value of our program, principles, etc. We have a very good program, our session is perfect. The thing that I think is important is the value of our program, principles, etc. We have a very good program, our session is perfect. The thing that I think is important is the value of our program, principles, etc. We have a very good program, our session is perfect. The thing that I think is important is the value of our program, principles, etc. We have a very good program, our session is perfect. The thing that I think is important is the value of our program, principles, etc.
The recent enactment of the "Drew Bill" does not make it an active law until passed upon or put into action by a Commission at Washington. For that reason, we consider it inadvisable for our members to enter into discussion about the time with federal employees who happen to be our patients or with friends who have charge of federal employees.

We all appreciate the importance of this piece of legislation and are confident that the Commission will give it the proper interpretation. However, it is deemed best for us to give it as little publicity as possible until the different state and county units are advised of this new law by the Commission at Washington.

These different units will then be ordered to post notices of the same for every employee in the local health department. We will all federal employees concerning their privileges in regard to their selection of the physician for hospital in case of sickness or accident. Until this is done please be advised that no service letters will be contemplated by our State society.

Changes and New Standing Committee

The growing demand for greater and better State organization activities made it necessary to change the name of some standing committees and the creation of several new ones.

In order for our State Society to participate in the services of the Public and Professional Welfare Committee of the National Organization it was necessary to create two new sub-committees. One on Radio is headed by Dr. Thomas Lange, of Cedar Rapids. The other known as Editorial Contact is combined with the committee on Public Education and will be under the chairmanship of Dr. Biddison of Nevada. "More power to Dr. Biddison".

A new committee on Maternal and Child Welfare was created for the purpose of compiling statistics of our activities along this line and to secure information from Federal and State sources for our members. This committee will also cooperate with Federal and State Commissions.

Dr. E. F. Leininger of Des Moines was appointed chairman of this standing committee.

The committee on Child Conference is a substitute created for the purpose of planning ways and means of establishing a city or district clinical conferences. Dr. Lydia Jordon, of Davenport was appointed chairman of this committee. The activities of this committee have already stirred considerable interest.

THE LOG BOOK

C. Ira Gordon, B. A., D. O.

The department of Pathology is an important one to any school of therapy. Dr. Gordon assumes the major part of the didactic teaching of this subject and closely correlates his lecture work with the laboratory course. He was an experienced teacher in high school sciences before entering the college to secure his degree in osteopathy, and has continued his study of the sciences, applying their facts and principles to the science of osteopathy.

In addition to his lecture courses at the college, Dr. Gordon maintains an office in the city and takes part in the local and state association activities. He has held important offices in both local and state associations, and is frequently called upon to address lay groups.

Howard A. Graney, D. O.

Dr. Park graduated from the Des Moines Still College of Osteopathy in 1927. He immediately opened offices in Des Moines and has been conducting a successful general practice since. His interest in association work has resulted in his election to many offices in the several divisions of the state association. He has also appeared several times on the program of the association and as a delegate from the state.

Dr. Park's experience in the field of general practice has given him an insight into the application of osteopathic care and treatment of a great variety of cases. This personal contact adds the necessary concept to the presentation of his subject of Osteopathic Therapeutics.

John M. Woods, D. O.

Graduated from the Des Moines Still College of Osteopathy in 1923. Recognizing his talent, Dr. Woods was made a member of the faculty immediately after his graduation and has since been continued as a regular member of the staff. His activities aside from his lecture work at the college have been his private practice and as an executive in the local and state osteopathic groups. He is in demand as a speaker and meets with many of the profession each year. He is a member of the clinical staff of the college and majors in osteopathic therapeutics.

Edw. F. Leininger, D. O.

When a surgeon selects an assistant it is done with the utmost care and consideration. Dr. Granev is first assistant to Dr. J. P. Schwartz of the Des Moines General Hospital, and as such has a responsibility that requires complete understanding and a trained and steady hand. Two years as an intern and three years as an assistant has brought Dr. Granev up in surgical work, and his lectures and demonstrations are praised highly by the student body. Dr. Granev has proved an able assistant in the department of surgery.

MRS. K. M. ROBINSON

is making a trip to Duluth and points north, her objective being beyond Winnipeg in Canada.

Paul L. Park, D. O.

Following his graduation from the college in 1955, Dr. Leininger served an extended internship at the Des Moines General Hospital. His studies and interests in diagnosis and treatment of gynecological cases attracted the attention of the trustees and he was appointed chairman of the teaching staff of the college.

Dr. Leininger superintends in the department of Obstetrics and is available at all times for advice to the students in the care of patients in this department. He is a member of the state and national osteopathic organizations and is frequently called upon to discuss the subjects of his specialty.

Student Assistants

It is not the policy of the college to employ student or undergraduate assistants unless special talent is shown in some department. These men, who will graduate shortly, have not only demonstrated exceptional students in the department in which they assist, but they have also maintained standards throughout the course in all subjects above the average. Our college is constantly alert to the need of professional talent and is able to point with pride to these young instructors growing up with a stable osteopathic background and authoritative osteopathic precedents to follow.

A. S. BARNES

Mr. Barnes came to the Des Moines Still College of Osteopathy well prepared in the sciences. Having received his degree at Simpson College, he taught science for two years. He has been assisting in the department of Bacteriology since his registration and has done exceptionally fine work.

PAUL E. KIMBERLY

Belonging to the second generation of the many who study osteopathy, Mr. Kimberly entered the college with very definite ideas about his osteopathic education. Early in his work he demonstrated his interest in the department of Anatomy, and since his second year has been assisting.

NEIL R. KITCHEN

Following his graduation from the Pharmacy College of Wayne University, Mr. Kitchen filled a position with one of the larger drug firms in Detroit. His insight and background proved to his own satisfaction that Osteopathy offered much more as a system of therapy and he came to Des Moines to study. During his second year he has been assisting in the department of Bio-Chemistry.

DR. FREDERICK E. HECKER—
and Miss Joy Brown were
marred in Milwaukee, Wisc., on
July 16. Congratulations and
best wishes, Freddie.

DR. B. A. WAYLAND—
recently of Decatur, Ill.,
is now located in Cedar Rapids,
Iowa.
The Student Situation

The profession and all those on our list of prospective students were advised a year or more ago of the additional one year college requirement beginning this fall. We as members of the board of trustees of the college could look forward to the class of May, 1942 which would enter this month and know that it would be less in size than the one entering a year ago. This one year of added students may be expected to take care of many of the students. We sometimes have our doubts about the advisability of cutting our numbers and, tho we can "picture" what we might do we should perhaps also "view with alarm," this change. With half the number entering this year as compared with last year this class must be augmented by some means if we are to carry on the educational effort now given and increasing at the college. When this class assumes the duties of Seniors they will be too few the numbers to take care of even one of the several clinical departments.

The osteopathic profession needs something to excite it to the point of intense activity. As a whole we are too complacent. We are too well satisfied with ourselves and our position. We do not realize the potential value of the profession and all those who are working for its development are doing so in the hope that day will see the realization of its possibilities. We must look to our students for new ideas and new ways to carry forward the work of the profession. They have the same potential as we have and we must show them how to develop it.

You are constantly making contacts with many of these young men and women who have the preliminary qualifications and they could be inspired if you could reveal to them the excitement of the profession. It is only by personal enthusiasm in direct contacts that new students will be inspired to enter the profession and increase its standing army.

Written information is never as effective as that inspired by personal enthusiasm in direct contacts.

This year you in the field, upon whom we have impressed the necessity for new material, MUST see the light. You MUST keep the future of osteopathy uppermost in your mind and strive to assure a future for our science in which it may be comparable to the great universities of the world. This means added strength to everything osteopathic—its colleges, hospitals, sanitarium and all groups down to each individual in practice.

THINK!!

A recent case of Eclampsia in the Obstetrical Clinic sent us back into the records of this department. We were just a little surprised to find that it had been twenty-one years since such a case had been registered in the clinic and we were not a little surprised at the other items of interest as we compiled a few figures. It is well worth your time to go over some of them. Since the OB records of the college ante-date the Iowa official registration of births we have occasional calls to establish the birth date of individuals who were born as long as forty years ago, the record being still a part of our permanent files in this department. Rather than go back over the entire forty years we will take the last twenty one years and give you some totals to think about. For this period we list some items and will then append a few general comments.

Four Thousand Six Hundred Seventy-four Cases.

This is not for the forty years of operation of the clinic but for the past twenty-one years or an average of over 220 cases per year. We think this is an item for you in the field to think about. If our students are ambitious to learn obstetrics at the bedside, the opportunity is here. Those demands in this department are exact and each student must make a minimum number of actual contacts both in pre- and post-natal care and must make the required number of actual deliveries under the supervision of the superintendent in the department. With this quantity the variations are to be noted.

Sex.

The records show 51% male and 49% female. This is of no consequence except to show the very nearly equal division that Nature seems to take care of.

Fetal Position.

4227 cases were Anterior Occiput. Of the remaining approximately 10% 144 were breech, 55 were Posterior Occiput, 5 were Face and 55 required versions. 165 cases required the use of forceps and 10 via the Cesarlan method of delivery. By comparison it would tend to prove that osteopathic care has had marked influence on the mortality of the birth process. The few cases that vary from the normal process are recorded with reasons. The excessively small pelvis, the very large infant and other factors are well known as producing the more common variations noted in the records. The student is taught to watch carefully for these in the examination of the patient and in frequent check-ups during the progress of the pregnancy.

Maternal Deaths.

During this period of 21 years only 8 maternal deaths were reported. We are proud of this record and attribute it to the osteopathic treatment and careful checking of the patient thru the entire period of her registration in the clinic. With a clinic such as ours it is often difficult to conduct the case in the same way as would be done in a modern hospital. Remember that these cases are deliveries made in homes and as some of our students will attest, these homes are many times without adequate water, heat, light and other needs. Many of these cases approach the primitive and we are fortunate to have such a low maternal death record.

Fetal Deaths.

The records show 133 total which of course takes into consideration those born dead as well as those occurring during the delivery and immediately afterward. This is also low and shows that the proper treatment during a pregnancy not only is of aid in raising the resistance of the mother but also strengthens the infant.

Lacerations.

The figures on lacerations will vary with the obstetrician or his methods, the size and tone of the mothers pelvic structures and the size of the infant. Taking everything into consideration in the general run of clinical cases this is a very low figure. It is the good plan of "waiting" that so often saves the mother from serious tears. Treatment of lacerations are either not counting the minor tears or is perhaps selecting their cases for report.

Deformities.

Only 20 cases of deformities have occurred in the past 21 years. These include many that (Continued on Page Four)
The brothers of Iota Tau Sigma have returned to school with renewed vigor and much enthusiasm, and the coming school year is destined to be the best the Chapter has had for several years. We regret the loss, by graduation, of such outstanding men as William Daniels, George George, and Pat Kelsey, but most of the old men have been back and are tugging at the loathsome intent on giving their best to Osteopathy, Still College and Beta Chapter. Brothers Tony Sloan and Robert Lindquist report a wonderful time at the National Convention and have related to us the benefits derived therefrom. Ed Jaranson fished all summer in Evetile, Minnesota; Howard Sperry spent enjoyable summer in the Clinic; A. S. (Sid) Barnes headed the cool of the western vacation land, and spent three months in Esterville, Iowa with his bronzied physique in the role of Dr. Facto and Dr. Luby after and incidentally a visit at the home town. Esterville, Iowa, with his bronzed physique in the role of life guard; Gray spent the summer in Missouri; Ohio; Iowa; Oklahoma; Texas; Scott Fisher slayed all the girl into Still College.

As the school bell chimes the sunny summer of every year the P. S. G.'s, will sponsor the Fall Assembly and each member will be threshing his brain to find the best and most interesting and instructive as- semblies.

The plans for the years work and play are outlined. The various committees have been at work on their respective duties all summer, and from the very start the Chapter activities have assumed the air of mid-semester smoothness. We are going places this year.

Attention Alumni!! Drop us a line—get better yet come and see us. A day or two with our old friends and incidentally a visit at the College will be good for what ails you. A. S.

ATLAS CLUB

The Atlas Club is now in full swing and looking forward to a most successful school year. All of our old members are back this year, except one and new prospects are promising. Quite a bit of work has been and is still being done on the improvement of the house. The bath rooms have all been done over and new linoleum has been purchased for them. The house as a whole is in excellent condition.

We wish to sincerely welcome all old and new men back to Still College. We know the old men like it at the best and are sure that the new ones will.

Things to find out:

Why has Engleman's ear been named the "Mayflower"?

Why is Costello staying home at nights?

Where are the Sophs muttering strange things to themselves?

What is the peculiar noise heard at 7:00 a.m. in the dorm?

Is it man or mouse? R. D. B.

Delta Omega Sorority announces the following newly elected officers:

Rebecca Richardson—President
Dorothy Holten—Vice President
Beryl Freeman—Treasurer
Georgia Harris—Recording Secretary
Lillie McClure—Corresponding Secretary

Beryl Freeman was re-elected as secretary to the Interfraternity Council. Georgia Harris was appointed as delegate to the meeting of the national convention at Cincinnati and will give her report on this meeting to the Beta Chapter.

We wish to take this opportunity to welcome the new Freshman Class and are especially happy to welcome a new girl into Still College.

As the school bell chimes the sunny summer of every year the P. S. G.'s, will sponsor the Fall Assembly and each member will be threshing his brain to find the best and most interesting and instructive assemblies.

The opening of the college in the Fall along with the public schools of Des Moines means some quick work in the Athletic Clinic. With four high schools and a junior college to take care of, a careful watch is being kept for any injuries that may occur. Dr. Luby has been absent because of illness. Of course we miss the ones who sporting events and are glad to know they are on the road to success.

Dr. Jerry O'Berski and Ar- ther Haight are interns in the Detroit General Hospital and are reported doing fine work. Dr. Donald Wicke has journeyed to England and will continue his studies.

Robert Luby of the Ohio board will set up practice in Columbus with a prominent eye, ear, nose and throat specialist. Dr. Earl Sar- gent and William Heldenman are remaining in the state. Sargent in the Roosevelt Center of Des Moines, and Heldenman in the northern part of the state.

Our president, Neal Kitchen, announces the first regular business meeting of the year, Phi Sigma Gamma House, Tuesday evening of the 27th of September. At this meeting Dr. O. I. Santcler, national president of Phi Sigma Alpha, will give a review of the national meeting at Cincinnati this past July.

Phi Sigma Alpha is again prepared to take an active part in the school activities this year as last and as a complete outline of the events for the coming year will be published later...

J. C. R.

N. O. L. C.

This month means the beginning of the service to the fra- ternities and sororities thru the National Osteo- pathic Interfraternity Council. Presidents and other officials of our national organizations keep a sharp lookout for the official letters and fire your answers back.

Editor - E. Harwood

Osteopathic Therapeutics

It has been suggested to me by numbers of my friends that I attempt the preparation of a series of brief articles dealing with the subject of osteopathic therapeutics. By the term "osteopathic therapeutics" I wish to refer to those measures used in the treatment of disease which are peculiar to osteopathy.

I think it may be well to differentiate here in a few words between osteopathy as a science and osteopathic school of practice. Osteopathy, as a school of practice, has incorporated many things which were not discovered by Dr. Still, nor developed by the osteopathic profession. These measures have been incorporated into the osteopathic school of practice because they were found useful and desirable. They were incorporated because they enlarge the field of useful practices and because they were considered to be not inconsistent with the osteopathic school of thought. Thus surgery, various modalities of physio-therapy, diet, hygiene, public health and sanitation, the use of various medications, naturopathic, anesthesia, antisepsis and biologics, have all been incorporated into the osteopathic school of practice.

Osteopathy as a science refers to those distinctive contributions in the field of medical treatment of disease discovered and developed by Dr. Andrew T. Still. Taking these fundamental and original concepts of Dr. Still, we have attempted to present osteopathic measures of value in diagnosis and treatment in various conditions of disease commonly met in practice. A. D. B., D.O.

Transfers

Approximately twenty students have come to us this year with advanced standing having transferred from other osteopathic and medical schools. We take this as a distinct compliment to our institution. In the past we have had each semester a few added to our student body but this year the number has increased to the degree that it has attracted more than a passing remark. Many of these transfers are entering with the lower classes. In the past we have had general reputation for being a small clinic at our college has interested the majority but these twenty are scattered throughout the whole four years which leads us to believe that every department of our institution is proving its ability in attracting the attention of students of osteopathy.

We sincerely welcome this addition to our family and hope that they will feel that they are as intimate a part of the student body as if they had registered originally with the Freshman class. Many of these students with the graduating class are already at work in the clinical departments and are finding their time very much limited.

Faculty Changes

One of the several responsibilities of the trustees of the college is to maintain a faculty qualified with the high standards of teaching required for the progress of osteopathy. The few changes in the faculty this year are called to your attention for the reason that we take pride in the efficiency and ability of our faculty group which can carry on after us with few changes in personnel.

DR. JOHN M. WOODS
Dr. Woods, after taking an enforced leave of absence due to illness is back with us. This year he is devoting his entire time to the college and will follow his regular teaching schedule in the mornings with clinical examinations, consultations and conferences in the afternoon. He needs no introduction to the profession for he has appointed the osteopathic therapeutics chairman at our college in 1905 and has been a member of our faculty for the past sixteen years. We are all sincerely glad to welcome Dr. Woods and sincerely hope his returned good health is permanent.

DR. R. B. BACHMAN
At his own request Dr. Robert Bachman is taking a year's leave of absence from duties at the college in order to conduct research in surgery, various modalities of physiotherapy, vitamin therapy, and surgical procedures. He will join our faculty group at the beginning of the next academic year.

DR. E. F. LEININGER
For the past several months Dr. Leininger has been filling a position at the university. He will return to us in the fall and graduate osteopathic school of medicine with the class of 1931.

DR. W. O. HOPKINS
Dr. Hopkins is on leave of absence from the college this year to take a position in a university in England. He will return to the college in the fall of 1930.

DR. WILLIAMINA CUMMINGS
Dr. Cummings is on leave of absence from the college this year to take a position in a university in England. She will return to the college in the fall of 1930.

Dr. Fisher, who has been a member of the faculty for the past four years, has left the college to accept a position in the osteopathic department of a large medical school.

We sincerely welcome this addition to our family and hope that they will find time to return to Iowa and visit us. We welcome them always.

J. B. SHUMAKER
A. B., M. S., Ph. G.

To find a successor to Dr. Fisher in the department of pathology was not so much finding one but eliminating all but one. The board had knowledge that Professor Shumaker had talent and experience teaching Chemistry in the past for he was a member of the faculty for two years beginning in the Fall of 1929. The years have necessitated many additions and expansions of our knowledge of the subject and we are fortunate in having Professor Shumaker back with us in this department. His detailed knowledge of the subject and his standing in educational circles will be an added attraction to our college.

Dr. Bachman will remain a member of the board of trustees of the college and has been teaching Gynecology for the past several years.

DR. W. O. HOPKINS
Dr. Hopkins is on leave of absence from the college this year to take a position in a university in England. He will return to the college in the fall of 1930.

DR. WILLIAMINA CUMMINGS
Dr. Cummings is on leave of absence from the college this year to take a position in a university in England. She will return to the college in the fall of 1930.

Osteopathic Therapeutics

It has been suggested to me by numbers of my friends that I attempt the preparation of a series of brief articles dealing with the subject of osteopathic therapeutics. By the term "osteopathic therapeutics" I wish to refer to those measures used in the treatment of disease which are peculiar to osteopathy.

I think it may be well to differentiate here in a few words between osteopathy as a science and osteopathic school of practice. Osteopathy, as a school of practice, has incorporated many things which were not discovered by Dr. Still, nor developed by the osteopathic profession. These measures have been incorporated into the osteopathic school of practice because they were found useful and desirable. They were incorporated because they enlarge the field of useful practices and because they were considered to be not inconsistent with the osteopathic school of thought. Thus surgery, various modalities of physio-therapy, diet, hygiene, public health and sanitation, the use of various medications, naturopathic, anesthesia, antisepsis and biologics, have all been incorporated into the osteopathic school of practice.

Osteopathy as a science refers to those distinctive contributions in the field of medical treatment of disease discovered and developed by Dr. Andrew T. Still. Taking these fundamental and original concepts of Dr. Still, we have attempted to present osteopathic measures of value in diagnosis and treatment in various conditions of disease commonly met in practice. A. D. B., D.O.

P. & P. W. Projects.

Under the supervision of Dr. M. Biddison, Chm. of Public Education, the Department’s work this year is taking form. Anyone selected to serve Dr. Biddi-
sen’s committee may well con-
sider it a privilege to carefully study and follow the detailed in-
struction supplied through this program to the A.O. A. Coun-
selor, Mr. Caylor.

Dr. Thos. F. Lange, Cedar Rapids, Chm. of Radio Education, is hopeful that the new station will swing into the stride with which our neighboring states of Kan-
sas, Oklahoma, Wisconsin and Illinois are holding up. President Chappell began the program for this month over WMT on September 1st. An indefinite weekly series of 15 minutes each, Wednes-
day evening at 7:30 p.m. over KFJB-1200 Keys, Marshall-
town, begins.

ATTENTION!
Will all present County Osteo-
pathic Society Secretaries please send the complete panel of your office to the office of State Secretary in Marshalltown?

Some District Societies have failed to contact their organized County Societies directly as this COOP-
ERATIVE movement develops.

ROtery
Will every member of Rotary Club report the name of his luncheon club to the Secretary-
Treasurer of the Vocational Guidance Group of Rotary International,

Dr. E. H. PROCTOR, O.D. 24 E. MONROE STREET CHICAGO, ILLINOIS

Dr. L. M. MONGER—
of the Monger-Paul Os-
topathie Clinic. As one of the first of the Alumni group of the Denver Polytechnic.

Since Mayon graduated in 1930 we have watched his rise and ex-

Obstetrics

ness and many other legitimate causes are recorded in this list.

47 cases or about 1.5. Just enough to keep us on the look-
out for twins and wish for one of the rarer cases of con-
bined births. One of our Senior girls came into the office last week with a fine month-old baby on each arm. It was a situation that we delivered the latter part of the vacation.

A Case Report
We had our reward of sta-
tistics reach at random into the

one of these cases. It shows the
care given the patient all thru
the pregnancy, the detail of our
records and the truth and time
necessary to carry on patient
thru. This shows you that our
students have actual contact
with the patient from the regis-
tration to the clinic if the case is
discharged. The fact that these mothers come back to
the clinic for care of their pregnan-
cies and brings friends is suffi-
cient proof of the efficiency of
our teaching.

Mrs. P. W. Age 18, primipara.
Routine examination showed
an exceptionally good physical
condition. Her last period was
given about one month previous
to the date of examination and considering the size and shape of
the abdomen and palpable
parts the date of delivery was
set at about one month follow-
ing. Consideration was given
to the fact that in a young mother
the first period of pregnancy is
variable and may be terminated
earlier. The patient was seen
weekly or the case is rushed to
the hospital. Her subject was, “Paying
Federal Compensation.” She ex-
plained in a simple and straight
forward manner the way in which
Osteopathic Physicians are privileged in the care of federal employees since the enactment of the “Draw Bill” in the last session of Con-
gress. The names of Osteopathic Physicians are being placed in alphabetical order with those of the Medical Physicians and will be called on cases in rotation in
each county of the State. Within the next few weeks each phy-
ician will receive a complete
written instruction for the fill-
ing in of the necessary papers
in regard to each case and the
names of these Miss Wild and Miss Wemple expressed their desire to cooperate with all physicians and asked that
all would feel perfectly free to call our services when ever necessary.

The next meeting will be on the second Monday night in Oc-
tober and it is expected that cases Inter-

Polk County
The Polk County Osteopathic Association met for the first din-
ner meeting of the year at the Hotel Chamberlin on Fri-
day evening, September 3rd. A good attendance was unusually good for the first meeting, with almost 30 Des Moines physicians present.

Miss Ethel Vest who is chairman of the Iowa Division of the Federal Compensation Commission was the speaker of the eve-
ning. Her subject was, “Paying
Federal Compensation.” She ex-
plained the Federal program in
straightforward manner and how
in which Osteopathic Physicians are privileged in the care of federal employees since the enactment of the “Draw Bill” in the last session of Con-
gress. The names of Osteopathic Physicians are being placed in alphabetical order with those of the Medical Physicians and will be called on cases in rotation in

O. E. Owen, Sec.
One of our graduates of 1902 who has practiced on the West coast for quite a few years dropped in the other day to visit for a few minutes. This doctor deplored the fact that the annual days of osteopathy seemed to be over; that we were not curing the incurables and that we were getting into a position where we were no longer the major topic of dinner arguments, pro and con, of which non and nay may be true in some places but it is not true at Still College. The rare day occasionally when nothing exciting happens in any way but with the quantity and variety of patients coming to the college for treatment and the many cases taken care of outside, the matter of curing the incurable is so common that it is not as exciting as it might be made. However, when a student starts in the clinic and cures an incurable case or her first case of this kind is discussed the excitement is renewed. In the Spring the one reported below is perhaps not the most spectacular but it is extremely interesting from several viewpoints. This case history is a part of our permanent files. The student who treated this case is still in college but will graduate in May '39 and Dr. Facio can be found along the college building almost any time during the remainder of this year.

Curing the Incurable

Mr. G. B. of Des Moines. Occupation, clerk. Age 53. Entered the clinic March 31, 1938. He complained of regurgitation of food and mucus about 15 to 30 minutes after each meal. He said that he had not been able to lie down and sleep in bed for fully a year because of the collection of mucus in his esophagus which caused him to choke and made breathing difficult. Because of this he has been sitting up in a specially constructed chair to sleep for the past year. He has been on a special diet and has not eaten any meat, with the exception of crisp bacon, for the past twenty months. He also complained of his left arm and shoulder, which had been injured eighteen months before falling from a box car. Since that injury he has not been able to lift his left arm above his shoulder. Because of this injury he was forced to give up his work with the railroad. The medical staff of the railroad informed him that he would no longer be able to use his left arm and offered him a very generous settlement. He signed a release and accepted the offer of his employers. He has had medical and chiropractic care and has not eaten any meat, with the exception of crisp bacon, for the past twenty months. He has been practicing in Des Moines but recently had not been feeling well and went to a veteran's hospital in St. Louis for more complete diagnosis and treatment. While there he contracted pneumonia and died. Contrary to a report in the local newspaper he was a graduate of osteopathy and together with Drs. S. L. and C. G. Taylor founded the Des Moines first tonsil clinic under the name of the Taylor Clinic.

Sincere sympathy is extended to his wife and his brother, Dr. W. L. Taylor who is ill in California.

The physical examination showed a blood pressure of 124/82 with a pulse rate of 80, the temperature being normal. Other physical findings were negative with the exception of a marked tautness over the epigastrum on palpation and atrophy of the deltoid on the left. His weight was 120 pounds. The osteopathic examination disclosed lesions at the 3-4 C. Oesopito-Atlantio, 5-6-10-11-12 Thoracic. There was a slight left anhidrosis. Laboratory findings showed a positive iodine upon examination of the urine. The blood count was 4,900,000 red cells and 850 white with a hemoglobin of 75%.

The diagnosis was made by considering the many possibilities and eliminating by negative findings upon inspection, palpation, percussion and auscultation. Malignancy of the esophagus and stomach was eliminated by the time factors and the absence of any great loss of weight or any marked anemia. Diverticulitis was ruled out because of the short duration and rather sudden onset. Stenosis of the esophagus crossed off because there was no history of having taken any corrosive poison or other irritant which would tend to cause scar tissue with constriction. Spasm of the esophagus was eliminated as there was no history of a foreign body having lodged in the esophagus and no marked nervousness on the part of the patient. Anemia and pus ruled out acute esophagitis. Sarcoma of the mediastinal lymph glands was eliminated.

(Continued on Page Four)

---

Year Book

The trustees have approved a year book plan for the Fortieth Anniversary of the founding of our college. We are sure that this will be enthusiastically received by the student body and also that many of the alumni will wish copies. Next month we hope to have more complete information on the plan for the book and the staff will be announced.

Reception

The trustees of the college have set the date October 28 for the Freshman Reception. This is not meant for the Freshman Class only but is intended to honor all students who are attending our college for the first time this Fall. The entire student body will be present and will dance and play cards as guests of the trustees.

Student Council

The first feature of the entertainment program to be held by the Student Council will be a picnic to be held October 13. At the time of going to press we do not have the exact place but it will probably be held at the Fair Grounds as of last year. A fine feed and the usual games and contests are being arranged. With the whole student body there is no question that it will be a most entertaining program.

We hope the weather continues as it has been for the past week or two. Additional programs will be announced when the dates and other arrangements have been completed.
The month of September was quite an active one for the Atlas Club. The final touches were put on the house and a large number of activities were promoted. The smoker for the new men was held Friday, Sept. 16 with Dr. Parks as speaker. Everyone seemed to have a pretty good time. The following named officers were elected to different offices. Howard Sporek was elected president of the new class, and Scott Sanchez, president of the Junior class. We are quite proud of this fact.

Our fraternity is fortunate in getting a fine group of pledges. They have been approved by the critical eye of the fraternity, and are indeed ideal fine young men. C. Hall, J. N. Fox, “Spec” Jemini, R. Woods, and H. Wirt. This is an annual affair, will be held at the fraternity house, Oct. 29. Final plans and arrangements are now under way, an eventful evening is expected.

Since N. Woodruff has come back to town with his new streamlined model we have had a great deal of trouble keeping track of him. At the last fraternity meeting the Interfraternity Council plans were discussed and were met with a great deal of approval. The fraternity wishes to be known that they will give whole-hearted support to the council.

The Phi Sigma Alpha, National Honorary Fraternity, held their initial meeting of the school year at the Phi Sigma Gamma House, September 27th.

Fraternity business was conducted and plans for the Fraternity Activities during the coming year were made.

Pledging will take place during October.

Dinner meetings will be held weekly and will be held regularly throughout the school year. The first dinner meeting of the ensuing year will be held at the home of Scott Sanchez, Sept. 29th.

Calvaria chapter of Lambda Omicron Gamma National Fraternity wishes the faculty and student body of the Des Moines Still College a very successful New Year; therefore the year 1949 according to the Hebraic calendar.

If “Vирге” is seeking band material we want to inform him that in our midst is the only Paul Green who has mastered all musical instruments; the tubaist, the euphoniumist, the cornettist, the violinist, the pianist, the cornetist. Each week finds P. Green lugging home a new instrument. Beginning with the potato, then the squash, and finally an apple. We can expect a piano any day now. His roommates Feldman and “Rudy” bought earmuffs in self defense.

Those of you who believe that

Corresponding secretary: Joe Robertson.

Interfraternity Council

Dr. Halladay was host at 6:00 o'clock dinner Friday, September 23 at his home on Kingsley Boulevard to the members of the Interfraternity Council. Dr. Halladay has made this a semi-annual gathering for the convenience of the members and an opportunity for pleasure each semester. The delicious food and good fellowship were thoroughly enjoyed by all present.

After dinner the pledge slips were opened and bids were extended to the prospective pledges by the four men's social fraternities.

Through the efforts of the Council, copies of the Osteopathic Interfraternity Council will soon be on file in the library.

At a call meeting October 5, a calendar of events for all Fraternity functions was compiled.

B. F.

NOI.C.

The work of the National Osteopathic Interfraternity Council is being held up for the time being due to the failure of some of the officers of last year to make needed reports. We hope that these will be in shortly so we can make plans for the year.

A number of important items are on the spike now.

Osteopathic Therapeutics

(No. 2 in Series)

"A loss in anatomical integrity serves as the cause of abnormal physiological response." The foregoing statement is just another way of saying that "Structure determines function," or "Anatomical soundness is necessary for normal functional capacity and optimum functional resourcefulness." This fundamental principle, first recognized and stated by Dr. A. T. Still in 1874 was and is distinctly osteopathic. At the time it was stated, it was a revolutionary pronouncement, and it was really new ideas, it stirred up a storm of criticism and protest, but has since been accepted by the scientific world.

Dr. Still at that time also recognized and postulated another fundamental idea, that "The human body is self-sufficient." He explained that man is endowed by nature with the vital forces and mechanisms necessary to maintain health and to recover from disease, provided that all parts of the body are in normal relation and properly nourished. He visualized the body as a mechanism for natural immunity. By his philosophy and reasoning he explained both health and disease, Dr. Still stated that "The body determines function," or "Anatomical integrity determines function," and that all parts of the human body are in normal relation and properly nourished. He visualized the body as a mechanism for natural immunity. By his philosophy and reasoning he explained both health and disease, Dr. Still stated that "The body determines function," or "Anatomical integrity determines function," and that all parts of the human body are in normal relation and properly nourished. He visualized the body as a mechanism for natural immunity.

Among the multiplicity of factors which must of necessity enter into the headache the osteopathic physician's therapeutic armamentarium, there is one that will always stand high on the list and that is an intimate, detailed and comprehensive knowledge of the autonomic nervous system; its origin, its distribution and its functions. An osteopathic physician must be able to think in terms of autonomic innervation and function is his "cloud by day and pillar of fire by night." He must understand the course of the sciatic nerve, its relation to the atlas and the lumbar vertebrae, the relationship of the sciatic nerve to the spinal cord, the role of the autonomic nervous system in regulating the function of the viscera, the role of the autonomic nervous system in regulating the function of the viscera, and the role of the autonomic nervous system in regulating the function of the viscera.

The college was honored by a short visit from Dr. Harold Fenner of North Platt, Nebraska, Thursday, October 6th. Dr. Fenner met with the entire student body in a special assembly and extended to him covered several important subjects of interest to the general practitioner and surgeon. He was presenting from the meeting of the American College of Osteopathic Surgeons at Cleveland, Ohio. We will accept with much his taking time off on the return trip to spend part of a day at the college.

Mrs. K. M. Robinson—has started on the second lap of her vacation which was interrupted earlier in the season by the flu. She plans to drive to the Great Smoky Mountain National Park and possibly a few miles beyond.

Dr. Facto spent two days recently at the state meeting in Minnesota held this year at Fairbault.

Surgical Meeting

The American College of Osteopathic Surgeons met this year October 3-5 at Cleveland, Ohio, the meeting being held at the Cleveland Osteopathic Hospital and Clinic. Dr. Byron Cash of our faculty attended and was one of the speakers on the program and reported a fine meeting.

The program, which filled available hour of each day was extended beyond the official dates to take care of the many seeking aid in the clinic. Dr. R. A. Sheppard and staff proved excellent hosts and the visitors were cordially impressed with the appointments of the hospital and its facilities for taking complete care of every patient.

THERILOG BOOK

Digestive disturbance he treats in the splanchnic area, for constipation he treats in the latter part of that need to be investigated. It will be interesting to see what they have learned and what they need to learn yet. We should have more of these films and appreciate how that is being done by many individuals in our own profession.

Assemblies

September 10

The second assembly of the new session is given over to the introduction of the new students. It was not only that the incoming Freshman class but also any who were transferred from other colleges and who may have been out for one or more semesters. The usual plan of grouping the freshmen on the platform, having them give their names and home towns was followed. Dr. O. C. Johnson offered the latter part in the rivalry between that state and Michigan, Michigan will have to look to hearing in the next class.

September 23

Paul Green of the L. O. G. secured another talkie for us as an interesting but would have been much better if the sound equipment had functioned. Thru some error in the connections the picture had to run without the talkie part and much of the value of it was lost. We hope to have it back sometime as certain then that the projector is complete. We thank the L. O. G. for bringing the talkie in its present form.

September 30

At the dinner of the student body at the hotel in the Sophomore, Junior and Senior classes were duly impressed with the appearance of the college this semester shows a marked improvement in the program. The American Institute of Osteopathic Surgeons met this year at the Tenth and Grand and we have in our profession. Those of us who are interested in osteopathic surgery and who may have been out for one or more semesters. The usual plan of grouping the freshmen on the platform, having them give their names and home towns was followed. Dr. O. C. Johnson offered the latter part in the rivalry between that state and Michigan, Michigan will have to look to hearing in the next class.

October 8

Dr. H. E. Clybourne of Columbus, Ohio has been doing some work in movie photography which was proved to the students body thru a film. This was sent to Dr. Becker for comment and he said, "It shows the advantage of going out on both paths. Dr. Becker offered it to the student body asking for criticism following its showing. We were very glad to see this for several reasons. It brings attention to the material of the student body the fact that we have in our profession many who are doing real constructive work along lines that need to be investigated. It makes the student body of any college a more intimate part of the profession. Those of us who are interested in osteopathic surgery and who may have been out for one or more semesters. The usual plan of grouping the freshmen on the platform, having them give their names and home towns was followed. Dr. O. C. Johnson offered the latter part in the rivalry between that state and Michigan, Michigan will have to look to hearing in the next class.

Faculty Dates

Dr. Facto spent two days recently at the state meeting in Minnesota held this year at Fairbault.

Dr. Woods will meet with the student body on October 12-14, at Iola, Kansas, and will appear twice on the program.

Dr. Arthur D. Becker makes a trip to Denver the latter part of the month to assist at the Lamb Clinic.

Open Your Eyes

By E. Harwood

I have before me some printed pages of momentous import. Three of these have arrived within the last few days and all speak the same language. If you wish to think with me lay out the following: (1) The Log Book of September 24, 1938, page 13, "Student Situations." (2) The Journal of the A. O. A. November, 1938, page 159, "The Colleges—1938." (3) November, 1938, page 205, "1938 College Enrollment." (4) The Journal of Osteopathy, November, 1938, page 14, "Greetings to All Kirkville Alumni!" and on page 14 of the same issue "The Effect of New Educational Standards upon Enrollment in our Colleges." I also have at hand a number of letters relative to this same subject and this entire mass of printed expressions discusses the same subject.

I am taking a by-line with this article in order to interpret these discussions in substance say the lines if the reader will read further. The second and third paragraphs discusses the same subject and this brief, and in this way trying to hold your attention, may have to the profession and applied sciences neglected and we might add the needed strength to the once and only as far as so well written that although the second paragraph talks about the future, even as far as two or three year period.

The college looked ahead two years ago initiating a more complete organization of its Alumni. The officials of the college and the majority of the faculty were favoring with the students at Hoyt Sherman Place, the home of our president. The evening passed quickly and at a late hour the guests expressed their pleasure and thanks for a truly delightful evening at the home of our president.

With Hallowe'en just around the corner the college made the annual Fall Picnic one of the several events of this season. The Hoyt Sherman Place was the scene of the affair and with some dancing was enjoyed by a capacity crowd. The card room was used very little for the crowd seemed more in the mood for the more vigorous form of entertainment. The evening was more of a Summer type the punch bowl was a welcome feature.

The Picnic

An ideal day and plenty of room with good eats and a variety of entertainment marked the College Picnic a success. This was sponsored by the Student Council and held at the Fair Grounds.
THE LOG BOOK

FRATERNITY NOTES

ATLAS CLUB

Xiphoid of Atlas has had another busy month. Such festivities as the Pledge Dance and the Hay Ride have kept the members and the pledges quite active.

The Annual Pledge Dance was held Saturday evening, October 22 at the house. We were happy to have members of the faculty and a representative from the fraternities and sorority as our guests. Dick McGills orchestra furnished the music.

Another feature of October was an old fashioned Hay Ride. This affair took place Saturday night, October 23. A hay rack and a team of horses furnished the transportation. From the reports given after the party, it was an experience no one will ever forget. Quite a few of the men got limbered up doing round work trying to catch the wagon. The critical and competent superintendent was none other than our own George Bunge. It has been said that the wagon and Bunge never scored.

The highlight of our practical work was a talk by Miss Ava Johnson, the daughter of the former president of the college and a former member of the faculty. Miss Johnson, who has just returned from an extended stay in Europe, discussed pressing professional and public issues and gave an interesting straying toward Thanksgiving.

There was a general sigh of relief around the house as the first part of the Texas state board last summer and several other members of the Iota Tau Sigma, our life time honorary fraternity, brother, Dr. J. Dunham. Brother Dunham came to visit us on his way to California, where he is looking for a position. We had a good time in his car and it made it for the June exams. Good Luck anyway “loss.”

The Blackwood brothers, the first part of the Texas state board, were on the campus this month and will go on taking it this summer. What's the matter with you guys, can’t you stand the cold weather?

ΦΩΓ

The four years we spent at school, and our fraternity are to be the happiest days of our lives. We were reminded of this by an alumnus of this school and fraternity, brother, Dr. J. Dunham. Brother Dunham came to visit us on his way to California, where he is seeking a position. We had a good time in his car and it made it for the June exams. Good Luck anyway “loss.”

Although social fraternities are usually regarded as the name of the game, Phi Sigma Gamma looks at them as a study hall. This is the attitude that Phi Sigma Gamma students respect our fraternity.

On Sunday, Nov. 6, “Spec” Jenison and Don Soll were initiated into the fraternity. Pledgemaster H. Laird Taggart was in charge of the ceremony. May these members derive the same benefits from their fraternity the former ones have.

Of those men connected with Phi Sigma Gamma, six were pledged to honorary fraternities. They were:

To Phi Sigma Chi—John George Bunge, H. Laird Taggart and T. R. Keenig.

Thanksgiving brings to many a home of their loved ones, parents and wives their homestock all season's work. To those lucky individuals who are home for their Thanksgiving vacation we wish “happy landing.” We all know that those who stay here will have a good time.

ΦΨΑ

The regular meeting of the sorority was held at Georgiana Harris' apartment October 15th. Maxine Seabloom was taken into the fold and is now a full fledged "D.O.

Lavonne Overton was appointed escort. Georgiana gave a report on the meeting of the National Sorority which was received with a great deal of interest.

Dr. Rachel Woods entertained the group Monday evening. November 8th and is now a full fledged "D.O.

Dr. Rachel Woods was the guest speaker, whose topic was “Convalescence in Acute Disease,” in his usual capable manner, which proved to be very interesting and inspiring to the listeners.

A number of alumni members were present at the meeting.

ΔΟ

The past month has recorded for us the 40th anniversary of the college, the Stillonian should put in print a more or less detailed record of the activities, personnel, student body and alumni of the college.

To the practitioner in the field, we feel that this will be an excellent opportunity to re-live their school days and acquaintance with the several departments of the college. Of course, the attitude of the present student body realize that the Stillonian is the best representation we could have of our school days.

Publication of the Stillonian shall be in May, 1939. Subscriptions and contributions from the Alumni can be sent at any time up to February 1, 1939 in care of the college. May we hear from you soon.

The following members of the student body were elected to edit and publish the 40th Anniversary Stillonian:

Editor—John O. Roque.
Assistant Editor—Beryl Freeman.
Assistant Editor—Sib Barnes.
Business Manager—Paul Green.
Circulation—Harry Wing.
Photography—Paul Feldman.
Art—Joseph Prior.
Organizations—Ed. Callahan.
Facility, Social and Clinic—Max Greenhouse.
Activities—Phil Sheets.
Alumni—Henry Goeken.
Osteopathic Therapeutics

(No. 3 in Series)

I should like to make a statement in last month's discussion, "DISEASE IS A LOGICAL RESPONSE IN A DISORDERED STRUCTURE." Osteopathic spinal lesions change the chemistry of tissues supplied by vaso motor nerves to the corresponding segments of the spinal cord. The normal alkaline balance of the blood and the tissue fluid of the body is involved and an increase of pressure within the affected area is produced. This hydration change is coincident and coextensive with the vascular disturbance. Tissue so involved are impaired in functional response and in recuperative power. The infection in such tissues is lessened or gradually destroyed and the door is opened to symptomatic invasion. A "locus minoris resistenciae" has been established.

The story of pathological change goes further. When bacterial foci have developed and inflammatory or other irritative disease processes have superimposed, these are one or in combination and by themselves set up reflex bombardment of cordal centers and, spilling over from the autonomic nervous system to the somatic nerve nuclei, produce reflex or viscerogenic spinal lesions. May I now present a statement for your consideration and most careful consideration? THESE VICEROGENIC LESIONS ARE THE CAUSES OF THE PATHOLOGY THAT PRODUCED THEM. This is a most distinctive and important osteopathic discovery. No other therapy comprehends it. No other group of therapists can capitalize it and put it in practical use. It is applied nervous physiology dealing with known and accepted scientific facts. It is one of those few that can be understood and applied to knowledge, he is delving into the very foundation truths of osteopathic medicine. He is delving into the very subject of lowered resistance. The chemistry of tissues supplied from within. They have had little need for outside encouragement in the form of tangible students and funds. It is to be hoped that other osteopathic colleges will come to the full realization of this opportunity for osteopathic progress and meet the immediate needs of our colleges. The undergraduate student body at Philadelphia totals some 250. They will have 150 fewer students graduating from our colleges and hence 150 fewer applications for membership in the A. O. A.

When I turn to the Forum and look over the figures given for each college I am not encouraged. Even the Philadelphia and Los Angeles each show an increase. The geographical location of those colleges is an advantage to each. The undergraduate student body at Philadelphia totals the same as last year. The increase as given in the total is thru a large Post Graduate enrollment and that due to the change in the law in New Jersey. In fact they will have 150 fewer students graduating from our colleges and hence 150 fewer applications for membership in the A. O. A.

I will admit that we do need increased service to greater numbers. We must increase our facilities to accomplish more than the quantity we have at present. Will fewer osteopaths serve more patients and spread the truth of our profession better? Will a shrinking profession feel the greater pride, because of certain educational standards, than an expanding profession with the sense of increased service to greater numbers?

Dr. C. W. Starr Dies

We have a clipping from the Billings, Montana paper that Dr. C. W. Starr died there October 18 of a heart attack.

DR. MARY GOLDEN—Osteopathic physician having her class to the University of Ames, Iowa to hear a talk by Dr. Nelson, the subject being "Nutrition." A demonstration was also a part of the mornings program.
Alumni News

The college is greatly pleased over some recent news from our Alumni Association. A committee appointed at the Still College Breakfast in Cincinnati during the convention has been at work since then. They are to meet in the first week of October to report complete organization plans. During the recent state convention in Michigan the college got together at a luncheon planned by Dr. L. Verna Simmons of Grand Rapids. About forty attended and the college got together at the meeting that each year at the state meeting a similar luncheon shall be held.

Dr. John H. Rogers of Osbosh, Ia., was the principle speaker and convinced the group that the student and endowment situation in our colleges is not flattering. Several were called upon to express an opinion of what might be done to remend the situation and as a result Dr. Robert Morgan of Cadillac was elected president of the Michigan D. S. O. Alumni Association. Dr. Charles Auseon was elected secretary and treasurer and Drs. Russell Wright and Paul Leonard were elected officers of the society. A definite plan of action was decided upon and a resolution was offered request the annual breakfast to be changed to a dinner held at the same time of other college alumni meetings.

At the same time Iowa was getting under way with a similar organization. Dr. Fred Campbell called a group together in Des Moines and officers were elected and a program planned. Dr. Paul Park was elected president, Dr. Ruth Paul, secretary-treasurer, and Dr. Fred Batch as a guide and stopped to chat with Wallace the trader for a few minutes. On to Gallup, Cortez and to Mesa Verde for the night before heading north and Indian dances as in years past and met many old friends.

August 21—Drove to several points of interest on the Mesa and left late in the p. m. for Durango. Stopped on the way by Dr. Childress, an old friend who is a member of the Colorado legislature but practices Osteopathy on the side. Spent the night with Jim English’s camp and gosiped about the west.

The Vacation

August 19—Drove north to see Mrs. L. W. Peterson of Highland and received indicates that the college got together at a luncheon planned by Dr. L. Verna Simmons of Grand Rapids. About forty attended and the college got together at the meeting that each year at the state meeting a similar luncheon shall be held.

Dr. John H. Rogers of Osbosh, Ia., was the principle speaker and convinced the group that the student and endowment situation in our colleges is not flattering. Several were called upon to express an opinion of what might be done to remend the situation and as a result Dr. Robert Morgan of Cadillac was elected president of the Michigan D. S. O. Alumni Association. Dr. Charles Auseon was elected secretary and treasurer and Drs. Russell Wright and Paul Leonard were elected officers of the society. A definite plan of action was decided upon and a resolution was offered request the annual breakfast to be changed to a dinner held at the same time of other college alumni meetings.

At the same time Iowa was getting under way with a similar organization. Dr. Fred Campbell called a group together in Des Moines and officers were elected and a program planned. On to Gallup, Cortez and to Mesa Verde for the night before heading north and Indian dances as in years past and met many old friends.

August 21—Drove to several points of interest on the Mesa and left late in the p. m. for Durango. Stopped on the way by Dr. Childress, an old friend who is a member of the Colorado legislature but practices Osteopathy on the side. Spent the night with Jim English’s camp and gosiped about the west.

August 22—Early start to make Raton in mid p. m. Fine trip across the new Wolf Creek Pass. Gathered a few more eggs at and at Raton at 2:10. Met Dr. Davenport and some patients and went thru the new hospital. We certainly recommend it to you for it is a complete institution and the profession should be proud of. A report just received indicates that the whole town turned out at the opening. We continue the trip home and stopped over possible night at Lamar.

August 23—Lamar to Augus- 3539 miles—a swell time— tara, Kans., to see the Que. never felt better—had some ex- Mas, Miss and Dr. Augus- cellent pears, a good coat of real tan and about 150 new next year will do the Texas cacti region in much the same way.

H. V. H.
Memorial Program

It is an established custom at our college to take the first Friday of December for an assembly honoring the departed members of the Still family who have been our founders and leaders in the past. Dr. John M. Woods was selected as the speaker for the occasion and reviewed the outstanding factors in the lives of Dr. A. T. Still, Dr. George Still, Dr. S. S. Still and Dr. Ella D. Still in a most inspiring manner. The recent death of Dr. Ella brought one more member of the family to the memorial roll of those who have contributed so much of their own energy and integrity to Osteopathy.

Following the assembly the Sigma Sigma Phi fraternity met in a body at the graves of Dr. S. S. and Dr. Ella and, as in past years, placed a memorial wreath.

Our founders and leaders will never be forgotten but it is well to hesitate once a year in the rush of our many duties and pay honor to those who have left us with the responsibility of carrying on for our science.

At the Widney Hospital

A most interesting letter was received recently from Dr. Clifford Barry who is interning at the Widney Clinic and Hospital in Lexington, Nebraska. We wish we had the space to quote his letter in full and cite several of the interesting cases he has been in contact with. He is getting a real work-out and is highly appreciative of the opportunity offered by this new and completely equipped institution.

Open Your Eyes—II

By E. Harwood

Last month when the galley proof of the first of this series came thru there was no doubt in the minds of the readers as to the truth of any of the statements made or to their timely appearance. There was some discussion as to the advisability of being a little blunt and outspoken about individuals. Perhaps it is not good taste to mention names but when names are signed to an article it certainly is within the right of another writer to refer to the author if he so chooses and in an controversial vein. We have not had any indication yet that either friendly or diplomatic relations have been severed with any of the personalities mentioned in last month's article so continues.

As of last month we have collected the several publications sent us and have carefully looked them over. We note that Chicago thru its Beacon is silent on the question of students and the effect of reduced numbers on the future of the college. We still do not have anything from Kansas City but we note that Kirksville is continuing the plea for more support.

The major change in editorial comment comes from our own Journal of the A. O. A. We are happy to admit that we guessed a little wrong last month. We shot from the tone of the first article that the writers would continue along the road that they (Continued on Page 3)

A Kind Word

On the night of November 27 when the Taylor Brothers, (Evangelists) held their last meeting in the Shrine Auditorium, Charlie Taylor spoke as follows, "I want to especially thank Dr. Bachman, and if he isn't here will some one kindly pass it on to him, for those fine manipulative treatments that helped me to feel so good. Oh Boy! It takes the Osteopath to give them."

There was a grand ring of applause from 4,300 in the audience which seemed to certainly indicate their approval of Osteopathy. It would have been a great thrill for any osteopathic physician to have been present and heard this response.

—Dale R. Figg.
THE LOG BOOK

WHITE). Dr. Henry Ketman, Dr. Robert Forbes, and Dr. Brenton Schiffer were among those who visited the House during the past month. We wish to again urge the members of the house to make known the names of any prospective students to either the Fraternity or the school. The formation of Ohio, Michigan and Iowa clubs has been an added force in the recruitment of new students.

The members and pledges of the Kappa Chapter of The Atlas Club, wish to take this opportunity to wish every reader of the Log Book a very Merry Christmas and a New Year.

May you have the best of health, happiness, and prosperity in the coming new year.

-R.D.B., Stylist

PSI SIGMA PHI

Psi Sigma Alpha held their regular business meeting Tuesday, November 28th. The usual business was transacted. It was unanimously decided that a member of Psi Sigma Alpha would subscribe for the “Stillon” in the coming new year.

The following men were initiated:

PSI SIGMA PHI

The Sigma Phi Clinic Benefit Dance to be held Monday night, December 12th, at the Tower Ballroom has held the interest of all the members of the Delta’s. Every member and pledges the last few weeks. Ticke sales have been quite brisk and a success of the affair is almost assured. Bennett Greten and his swing band is to furnish the music. It is predicted the following evening will be a busy day for local osteopaths—to help untangle the jitterbugs and lam-beth walkers.

Our strong group of pledges has kept up its showing unusual promise and the various other projects of the fraternity for the coming months, are bound to meet with all the expectations put forth by their various sponsors.

Christmas has crept upon us all unobserved; only the singing Christmas carols give any indication of the winter season. Gifts are on the minds of all. There are many other things he has been in by the first of the month. Are you home try and make a few contacts with prospective students. Every member and pledge should know at least one prospective student. Don’t forget other that vacation ends January 3rd.

We the members and pledges of the Delta’s wish to extend our sympathy in behalf of the death of Brother Jeran son father.

On Wednesday, December 15, a potluck dinner will be held at Lavonne Overton’s home and each sorority member will have a “guest” child each time. A practical gift as well as a toy will be presented to each child guest. The last meeting was held at Maxine Scobin’s and Miss Margarette Maen talked about her experiences as an instructor and librarian at the Women’s Reformatory at Rockwell City, Iowa. Among other things she discussed the prevalence and control of venereal diseases at the institution.

Louise Michael is now wearing a pledge and will soon be initiated into membership. The Deltas extend a very Merry Christmas to all members of the profession and especially to our Alumni.

—L. M.

Notice to All

Detroit and Michigan Osteopathic Students

The Annual Student Dance sponsored by the Detroit Osteo- pathic Student Section in honor of all Detroit and Michigan students attending osteopathic colleges was held Tuesday evening, December 27th, in the Grand Ball Room at Hotel Statler in Detroit, at 9 p. m. A practical gift as well as a toy will be presented to each child guest. Don’t forget other that vacation ends January 3rd.

We the members and pledges of the Delta’s wish to extend our sympathy in behalf of the death of Brother Jeran son father.

Osteopathic Therapeutics

(No. 4 in series)

Region of head and neck continued:

 Conjunctivitis

There are a number of conjunctival infections which produce acute inflammation. As a general rule, the upper cervical area and the middle third of the neck are involved. Inflammation producing conjunctivitis is Koch-Weeks bacillus. Infections by the pneumococcus or the gonococcus are more rare and also more serious. In order to define our problem for this brief discussion, we will confine our discussion to conjunctivitis caused by the Koch-Weeks bacillus, acute contagious conjunctivitis. This disease or condition is frequently found among school children and may occur as localised epidemics.

There are several factors in the treatment of “pink eye” that are important adjunctive measures. The following may be mentioned; irrigation of the conjunctival sac with a warm non-irritating, mildly antiseptic solution; installation of a mild antiseptic in the conjunctival sac, the introduction of sterile white vaseline to favor drainage and to prevent the eyelids becoming glued together during sleep. The patient should be instructed not to use the eyes for reading or other close work. Depending upon the severity of the involvement, many or all of these measures are important and serve to facilitate recovery.

The advantages secured by osteopathic treatment consist chiefly in the discovery and correction of osteopathic lesions in the upper cervical area and the upper dorsal area of the spine. Vaso motor control of eye circulation both intrinsic and extrinsic is by way of the superior cervical ganglion. The pre-ganglionic innervation is from the upper dorsal segments of the cord first to third, more specifically, second dorsal. Osteopathic treatment means much more than just loosening up in these indicated areas. It rather consists of the most discriminating diagnosis of lesions in these areas and careful but insistent leverages to secure normal movability of involved articulations. Articular fixations must be thoroughly overcome.

The osteopathic treatment not only secures vaso motor tonicity to the involved areas and improves the vascular circulation, but also corrects the condition of the involved tissues. Healing power, recuperative power is inherent in tissues, but it is much more pronounced on tissues that will heal tissues. Healing comes from within. It is a process or power resident in the cell. Osteopathic normalization by correcting circulatory imbalance makes available to the tissues the resources of which they stand possessed. Venous and lymphatic drainage are favored by freeing up the temporo-mandibular articulations and bringing the jaw well forward and by careful relaxation of the anterior cervical tissues and other similar involvements as discussed in the November article. Mild and moderately severe cases recover quickly. Severe involvements require rest in bed and two or more treatments daily.

Osteopathic principles involved in a discussion such as in the foregoing case apply for any inflammatory condition involving the eye whether acute or chronic. In chronic conjunctivitis, in corneal ulcer, in rheumatic iritis and other similar involvements, it is of first importance that the blood supply be normalized by correction and maintenance in correction of any disturbing lesions. It is of greatest importance that trophism be unimpaired.

Many cases of disturbed vision due to muscular imbalance may be helped or entirely relieved by osteopathic corrective treatment. Certain nutritional involvements such as senile cataract can be improved or progress may be delayed by osteopathic manipulative treatment by means of means of lesion correction. Cases of eye disease occurring as part and parcel of the general condition such as syphilitic iritis, syphilitic corneal ulcer or syphilitic retinitis should receive anti-syphilitic medication in addition to the osteopathic measures.

TO OUR ALUMNI

The trustees of the college extend thanks and deep appreciation with the Seasons Greetings for the regular duties of the college. The Christmas holiday season brought Jane West, the daughter of Dr. Bruce Farmer to assist in the office. She was received by the group that it was well received. The interest in osteopathic studies was expressed in regard to the theme of the lecture. The main event of the evening was an introduction of sterile white vaseline to favor drainage and to prevent the eyelids becoming glued together during sleep. The patient should be instructed not to use the eyes for reading or other close work. Depending upon the severity of the involvement, many or all of these measures are important and serve to facilitate recovery.

Audi St indifferent Student Studies Strenuously

A young FREEMAN, who was a TAYLOR by trade, but also a good WALKER, picked up his B.A. at the CHICAGO WOOD behind the GREEN- HOUSE, thinking that he might see a CROW that he could not identify as it flew POSEY for his little daughter LILLY. As he was a good WALKER and had gotten by the GATEMAN at the SMOTHER ROAD, then and so came to a LEIGH near the MILLS, where the grass was very green. Though he was a HARDY IRISH man, he noticed that he had a PAYNE in the SOIL of his foot, and not knowing what it was, let it rest awhile. Being like REESE, he soon went to sleep under a FIGG tree. When he awoke it was GRAY with the GOLDEN morning LIGHT was just appearing through the WOODS. As he arose and picked up his bag, he found a COAT at a GLANTZ, a FOX jump from behind some bushes, so he grabbed it and ran in front of the animal over his shoulder, and soon knew he was near home, as he heard his YOUNG son, MICHEAL, BAHING. Upon entering the house, he walked through the HALL to the KITCHEN where the CASH was kept. He drew his KEAYS from a drawer, went outside, started his SANDLE, and drove down the road. He soon returned with some CASH and now knew HOWE he could buy some Osteopathic Student Loan Fund SEALS. That night he sleepy crawled into his WHITE SHEETS knowing that he had done a good turn.

Open Your Eyes—II

(Continued From Page One)

had started upon. Their article this month is entitled “College—II” and yet only about one-tenth of the article is about the college. I am happy to see that the theme has been shifted to the profession where it belongs. This matter of preparation for the decreased attendance at the colleges is more a concern of the profession than it is of the colleges. This matter of the colleges will continue to live if every college closes its doors tomorrow but Osteopathy begins to die just as soon as this thing actually starts. The individuals making our profession will continue thru their allotted time but Osteopathy will die with this generation unless the profession takes part of its time to serve as a teacher. They were so enthused that each sent one or two students a year back to the old school. Dr. Bruce Farmer, President of the Polk County Osteopathic Association and December 6 entertained among thirty members of the Auxiliary at his home.

NEXT CLASS ENTERS JANUARY 21
Athlete Care

The history of the osteopathic care of athletes goes back many years. The correlation of this interest has spanned only a short period. Those interested especially in this work were called together in Philadelphia in 1930 and the section of the A.O.A. formed. The literature is scarce and what is available is largely contradictory. The trial and error system seems to be the only logical method of arriving at conclusions since little has been done in the way of authentic records or any attempt to bring known pathological conditions and known therapeutical methods together.

The situation at our college is quite different from that in other institutions that are making a study of traumatic injuries. For the past fourteen years Dr. Halliday has been in charge of this division of the clinic and during that time has had the opportunity of treating all cases of all types and acquired during the several forms of sport organized in our high schools. Each Fall the Seniors are distributed to the four high schools and Dowling College. The Drake Freshmen and Sophomore under the supervision of Dr. Cramer, use one or more of the Senior class and others are busy working with students in the city. Following football, basketball begins and this care and observation of injuries continues until in the spring mixed with some cases where wrestling and swimming result in injury. Following the basketball season the schools concentrate on track work and prepare for the big event, the Drake Relays. With this out of the way one has time to do a little in baseball before the close of the semester. Every member of the Senior class is given the opportunity of seeing as much as he wishes in direct contact with these teams. This is not a theoretical course and it is not a contact course altogether. During the Junior year a lecture course of six weeks is given, the entire time being taken up with the discussion of all types of traumatic injuries with the students placed on these met with most often in each sport. The Senior at our college goes out on the field prior to the track season to get the best treatment for the condition he finds. He goes out with everything that the M. D. has plus one thing that few others have, and that is Osteopathy. The majority of our medical friends who attempt to treat athletes are worried at a loss to know what to do for them in the pill bag that will do much for injuries. We know thru past experience and many others also know, that the method of care is something that will hasten the repair and limit the effects of trauma.

When Dr. "Virz" Halliday addressed the Senior Class the first Monday morning of this semester of school and announced he had the care of athletes for the present season pretty well taken care of, but Dr. Halliday did need a few more students to properly handle all the football players he had lined up, a few of us wondered just how extensive and how far reaching the Osteopathic care of athletes in this community had been carried forward. And after his further announcement that he had fulfilled places for between 15 and 20 Seniors, the thoughts were—how many men is he providing care for?—what is the attitude of the players—individual and collectively, and of their coaches toward Osteopathic care during the training season, and whether there is any treatment or individual injury, etc., to such care.

The result was that Harvey Butler, Drake sophomore, was selected and the writer were instructed to report that afternoon to Mr. Gus Rump, Head Coach at Theodore Roosevelt High School on the side of Des Moines.

The reception given us by Gus immediately answered our unasked question concerning his attitude toward osteopath care. Was somewhat in the following order, in "machine gun" rhythm.

"Boys, we are certainly glad you have arrived because we needed you. Boys (addressing the football squad), here are the fellows that need you and I want you to have one of you checked over as soon as possible, etc., etc.

Likewise the reception extended by the players was most gratifying.

On checking over the roli we found we had 151 High School "junkies" to look after.

The first two or three days our efforts consisted of getting an introduction of individual players physical problem and recording it for future reference.

During this preliminary check up two cases were quite outstanding:

One, a young man 17 years old weighing about 145 pounds, whose record showed he had been at the boil around with all around athlete, showed indications of an indirect injury which had taken care of would become more pronounced and eventually incapacitate him from further athletic activity. He was referred to his family doctor, an Osteopathic Physician.

The other, 17 years of age, weight about 150 pounds, who had track talent as well as football ambitions, had a few days previously ruptured a blood vessel in the anterior portion of the right thigh. Apparently, the ruptured vessel was a small branch of the femoral artery near the apex of Scarpa's Triangle just for the artery passed under the Sartorius muscle into Hunter's Canal. The thigh was swelled and discolored and was further complicated by a lesion in the right Sacral-Iliac articulation, the sacrum being displaced anteriorly.

Upon Dr. Halliday's advice, the Sacral-Iliac lesion was corrected, the absorption of the hemorrhaged blood was hastened by 3 and 1 hot and cold applications 30 minutes twice each day, and an Ace bandage applied. Within 3 or 4 days after treatment started the player returned to practice. The above mentioned single playing time in at least two scheduled games.

Every day, thereafter, we were to have the usual "Charley Horse," a great many of which were in the Quadriceps Femoris group of muscles and were probably caused by the Lateral Latae muscle. In the great majority of the cases in which Osteopathic care was involved as was noted the Sacral-Iliac articulation was also in lesion, and in many instances the tension of the fibers was relieved immediately following correction.

In addition to these "mine run" conditions we have had innumerable involvements to deal with, such as scalp infections, ground and rotted rib loosened teeth, smashed nose, dislocated shoulder, fractured arm, etc., more or less (to mind the case of Bobby Hill).

Booby is just 16 and a game little rascal, although not large is stature. First afternoon he was on the practice field he fell on his left hand. He reported that his thumb hurt, but upon questioning there was no indication he was severely injured either in the thumb or elsewhere.

That afternoon he reported his thumb felt fine but that he had a pain in his left elbow. Examination showed the elbow very swollen and painful but he could still move the elbow as far as the swelling would allow.

He was sent to his family physician, who in turn had the arm X-Rayed. The X-Ray picture showed a green stick fracture on the lateral side of the humerus at about the level of the supracondyloid process.

We could go on and cite dozens of cases that have occurred during the past several weeks, each case distinctive and an experience in itself.

This is only one example of the many interesting cases that have occurred in the athletic field with material available at Des Moines Still College of Osteopathy at all times.

Irving W. Walters.

Dallas

Dallas is not waiting until after Christmas. It is too bad that only a selected few will receive the first fine issue of the Texas Osteopathic Round-Up. Do not be disappointed for you are on the mailing list and later you will have one of these pre-convention publications delivered with your mail. There is no question that the next convention is to be held and no doubt as to who is there on the job right now with all the preparatory steps planned. There is no drawl nor manna in any part of this news booklet. We will be in Dallas before the doors are opened and we are asking for the necessary reservations now for we expect a fine meeting and a display of that famous Southern Hospitality. We are already smiling in anticipation of the trip and if there are any who hold up this trip are outside the confines of the Southern Empire. Officials and Aides take note.

I goin a go, an you better be there too. Yes sir. Thank yuh.

Born

To Dr. and Mrs. E. H. Lodish of Detroit, September 29, 1938, a gr racial male child.

To Dr. and Mrs. L. Sanfelippo of Milwaukee, November 1, 1938, a son, Peter Ignatius.
